
> They seem to think that the First Amendment Rights don't belong
> to non-amateur-licensed U.S. citizens.

That seems to be what you believe, though there are loads of your posts
which could be shown to anyone with the stomach to sift through them.
They'd tend to make your statement about the First Amendment ring
hollow.

> >Tell you what: You settle on a subject and perhaps we can do that...if
> >you can't keep from launching into personalities.
>
> Tsk, tsk, tsk. YOU jumped into this thread ranting and raving
> about "not having an amateur license" in a remark I wrote to Kim.

Here's what Kim wrote:

"However, under dire circumstances when, presumably, a CW net would be
underway with very experienced communicators and would be the fastest,
most
efficient method of communication (hands down, no pun intended). For

once,
this is a thread wherein the real point of CW can be highlighted. CW
may or
may not ALWAYS be the "one mode that gets through when no other will."
But,
it's hard to argue that CW--if clear and done well--is the fastest and
most
efficient mode."

Here's how you responded:

"Kim, you are welcome to hold any belief system you wish, but the
FACT that on-off-keyed "CW" morse IS the slowest communications
mode in use today or in use a half century ago. I've seen it up
close
and personal throughout this whole past half century. It is
evidenciary
in the REST of the radio communications world."

You added gems like:

"It is the EXCEPTIONAL rarity now to find any two morsemen at
each end of a ham radio circuit who can do SUSTAINED "network"
communications by on-off-keyed "CW" morse at 40 WPM for
hours. HOURS. Networks need hours if the number of messages
are great."

and

"Nonsense alive and well only in the imaginative fantasies of mighty
macho morsemen. Real networks don't operate on imagination.
"Error-free" messages don't get relayed through self-glorified
boasting."

and

"Those who want to fantasize that morse is "faster" or "better" will
have to set up a controlled test NOT in morse favor to demonstrate
that alleged fact. Let all those might macho morsemen sustain
20 to 40 WPM continuously for an 8-hour period...and do the
communications with LESS error than any teleprinter circuit."

Those statements demonstrate your lack of knowledge of morse code and of
what good operators can achieve. There are a couple of other paragraphs
dealing with RTTY opeation that lead me to believe that you don't know
all that much about the limitations of radio teletype.

You're a guy who often whines about his First Amendment rights being
trampled. Yet you're complaining that I shouldn't comment on something
you've written which has a number of glaring errors. I have experience
with both RTTY and morse circuits. You have decades-old experience with
RTTY. Your morse experience is pretty much non-existent.

By the way, you seldom limit yourself to "a remark" to anyone.

> Your usual diatribe has been noted by all other readers and
> recorded at Google message archives.

It surely has and if you like, you can be treated to it again.

> >> TRY to understand that the rest of the radio communications
> >> world does NOT use morse code for communications.
> >
> >Try coming up with a valid explanation as to why I should concern myself
> >with that.
>
> No need to expect the impossible. Your royal mind is made up.
> It is unchangeable. :-)

So you've conceded that your "rest of the radio world" claim has no real
relevance to amateur radio operators.

> >> Tsk. You ARE seeing things that aren't there...
> >
> >Incorrect. You've snipped them so they aren't there.
>
> Tsk. You are STILL seeing things that aren't there... :-)

Nope, it doesn't work. They aren't there and I'm not seeing them %)

> >> I'm using the Internet to send these messages. Whether that uses
> >> radio or other means is not an issue.
> >
> >We'll never know. Your snippage removes any context.
>
> Tsk. I never introduced the communications methods used by
> the Internet.

That's a frank admission but why not go all the way: You never
introduced any communications methods used anywhere.

> One thing for sure, the Internet doesn't use any
> manual morse for communications! :-)
>
> >I can't see them. You snipped 'em.
>
> "If thine eye offend thee, cast it out..."

Yeah, if it was mine eye, I'd likely go along with that. In this
instance, it is you attempting to cast out mine eyes.

> >Very relevant. Why should radio amateurs follow the methods of
> >unrelated services?
>
> Tsk. Then why do radio amateurs require all the formalism of

Don't make DEMANDS, Leonard.
>
> Tsk. Look at the published numbers from the FCC databasee. You
> will find that the non-morse-test licensees have grown far more than
> all the morse-tested licensee numbers...and that continues to grow.

You asked who would want to be involved in amateur radio. Apparently
those folks would. Apparently you don't. Was that your point?

> You don't accept that any more than a "renowned historian" in here
> accepts it.

I don't accept that Technician Class licensees want to be in amateur
radio? You're silly.

> You must defend your imperial territory of rank/status/
> privilege via passing a 20 WPM morse test.

I defend my rank/status/privilege by passing the highest class amateur
radio license available. It gives me *all* U.S. amateur radio
privileges.

> >I know all about the fun in amateur radio. I know quite a bit about the
> >fun in usenet.
>
> Tsk. Not demonstrated in here.

That it isn't evident to you is quite believable.

> >Not really. I just took a look at amateur radio. I didn't see you.
>
> Wow! One glance and his imperiousness sees ALL!
>
> Superhuman. [gods of radio are like that...]

One glance through the RAC database shows that there is no Leonard H.
Anderson at your address, licensed as a radio amateur. It really is
that easy.

> Tsk. Still trying to forbid First Amendment Rights to U.S. citizens,
> aren't you?

Maybe you'll take a little time from your busy schedule to explain just
how you feel that your rights have been abridged. I'd be really

interested in reading it.

> Ave, Imperator!
>
> >Is it? You've written and written and written and written. I've not

> its elimination.

That's great. Now back to this "You are a god"/"You are no god" issue;
how do you feel about that?

> I have no problem at all on recognizing bullies and sociopaths....

There seems to be some difference of opinion on that issue.

> >Quite correct. I took a 20 wpm morse exam. It isn't possible for you
> >take it.
>
> Incorrect. I could still take a COMMERCIAL radiotelegraphy license
> test for 20 WPM.

When did COMMERCIAL radiotelegraphy license come into the discussion?
Are you planning to ship out? I thought you were discussing those being
forced to do as I did. I don't have a COMMERCIAL radiotelegraph

license.
Are you getting enough sleep, Len?

> I have NO desire to do so, but the USA allows
> that option.

So, its pretty much like your efforts toward obtaining an amateur radio
license, huh?

> >I took and passed written exams for the Novice, General,
> >Advanced and Extra.
>
> Are you expecting to be a guest of honor at the Kennedy Center
> for doing so?

It'd be nice, but it really isn't necessary.

> >It is no longer possible for you to do so.
>
> Ave, Imperator! [old Roman statement roughly translatable to
> "no s**t?!"]

I'm happy that you have understood.

> >No exams are given for two of those classes. Exams very different from
> >those taken by me are now being used to test for both the General and
> >Amateur Extra.
>
> ...therefore YOU are a "superior" ham.

Wrong conclusion, Leonard. Therefore, you can't take the.

> >> But, it is impossible to get you to admit to an error.
> >
> >I'd first have to make one.
>
> Gods of radio NEVER make errors. They even say so... :-)

It is really more simple than that. All that's necessary is to
demonstrate that one of your statements contains an error.

> >> Try to play with your Orion some more. Seriously, not trivially.
> >> Can't have a god of radio use equipment trivially. :-)
> >
> >Irrelevant.
>

Reasonable? I don't see anything you've undertaken in regard to
Pasternak's operation as reasonable. Your tirades have been going on
month after month. You haven't done anything at all in regard to any of
this, have you?

> > > > So far, you've produced exactly SQUAT.

You were asked where the charges were, not where the definitions are to
be found. So no authorities anywhere have done anything. Does that sum
it up?

I'll have my sister in Studio City brief me after it hits the local TV
news or makes the papers.

You know, of course, that these posts you make here regarding Bill
Pasternak, make you look like more than a little like a crackpot, don't
you? You're surely aware that, should you actually take any legal
action, that newsgroup archives of your frequent rants on Bill's posting
to this and other newsgroups would certainly come into play. Those
aren't going to do a lot for you.

In article <41731F0F.6070709@ix.netcom.com>, Robert Casey
<wa2ise@ix.netcom.com> writes:

>Back in the olden days, two brothers living at the same house
>got their ham licenses. But the FCC, seeing the same address,
>made them share the same callsign, as they shared the same shack.

When was this, Robert?

I know of two brothers with licenses who lived at the same address and had two different callsigns - more than 30 years ago.

Going back into the 1950s, I've read of husband-and-wife hams at the same address with different callsigns.

So it would go back to pre-1950 or so.

More fun facts:

At the start of WW2, the FCC cancelled all amateur radio station licenses, and stopped issuing new ones. But you could still get an amateur radio operator license - there were just no legal amateur stations where you could use it.

For many years, FCC and its predecessors would allow the same individual to hold multiple station licenses. This was fairly common back when portable operation required you to identify as such, and when you had to notify FCC if you operated away from home for more than 48 hours. Hams with a second residence, or who went away to the same place regularly, sometimes got second station licenses to avoid all that. Here in EPA, where it's common for well-to-do hams to own places "down the shore" in SNJ, more than a few hams held two station licenses - one with a 3-land call and one with a 2-land call. When those old rules changed, one of those calls had to be given up.

Uh huh...

Word has it that WB6JAC and others from the W6NUT repeater agree
with Dieter...Of course almost everyone ON the W6NUT repeater has
either received "QSL" cards from the FCC, is under indictment, or is
just plain operating illegally anyway...

According to Bill, he has very little if anything to do with this
NG in years. One of the last things he gleaned from this NG was an
item I wrote, which he requested permission to publish under his
column in "Worldradio".

> > > > > So far, you've produced exactly SQUAT.

Dieter wants us to waste our time chasing ghosts while he
stutters and tries to avoid the question.

Too bad for Dieter that we are smarter than he is.

He STILL has not presented ANYthing that even cosely resembles a
valid "charge", let alone filed a complaint with the District
Attorney.

Maybe he can get them to run a legacy episode of "L.A. Law", and
let him "try" his "case" on the show...???

> > > > > So....You go RIGHT AHEAD and show the "D.A." your "proof", Dieter...

> > I may have taken.

I guess Dieter is under the impression that I don't know how to
make inquiries of the "L.A. Times" on this side of the Mississippi
River, or that I can't find out from other sources as to "what's up"
on the Shaky Side.

And to think...Dieter had the cajones to call ME and "idiot" last
week!

Sheeesh!

> I'll have my sister in Studio City brief me after it hits the local TV

Until I rubbed his nose in it a month ago I really don't think he
thought that out...And had he NOT be running his mouth off in here,
probably no one would have known. Now everyone knows, and he (Dieter)

won't get away with his crusade unchallenged.

Now if there's even a HINT that he tries to "make a case" out of this, I will be one of the first one's in line to offer Bill financial assistance and offer statements on his behalf as to the frequency and character of Dieter's posts herein.

Like I said...Dieter is in for a whole lot of humiliation and embarassment if he tries to proceed with this crusade past the hot air, smoke and mirrors stage!

>
> You may look them up in the penal code yourself.

I could care LESS what the "penal code" has to say.

WHERE ARE >>>YOUR<<< CHARGES, DIETER...?!?!

Show us a letter to the D.A. voicing your concerns, charges and
PROOF that there is a criminal act going on!

> > And you DO know that if you DO file a complaint, that as soon as the story
> > breaks there WILL be people who show up or call the D.A. (or whomever you "file

>
> And what will you do should it be shown that I was correct?

I already told you, Dieter...I'll stand at attention right here,
salute, say "I STAND CORRECTED" and apologize for having doubted you.

However since you've NOT provided ANY proof, not filed ANY
charges, and do not have any idea of what you're letting yourself in
for, I S E R I O U S L Y doubt that I will ever have to make good on
THAT offer!

You have NO proof.

You have no VALID grounds for such an allegation.

If you do file "charges", your frequent and irrational rants in
THIS forum will come to light and you will be humiliated and disgraced
in the D.A.'s eyes.

So go ahead...Make my Century...

Personally I found them just fine.

What YOU will find hard to find is anyone who can attest to ARN's postings as being SPAM when there are over 300 hits a month in this forum alone for porno, cheap, non prescription erectile dysfunction drugs, and offers for get-rich-quick schemes...Especially when the CONTENT of ARN's posts are DIRECTLY RELATED to Amateur Radio POLICY.

But you go right ahead and ignore the facts, Dieter...File your complaint...

I DARE you.

"Freedom of speech", Brain.

You and Lennie like to wave that around when you feel like YOUR "freedom of speech" is being impeded. Of course you don't like it when someone else is exercising thiers.

And I kinda figgered that there was some sort of legal order over Lennie's head.

Thanks for confirming it for me, Brain.

> Please help me out (explain) on the meaning of the last comment, Brian.

Phil is an EE+LLD who has lurked in this group for years and who spent 28 years with the FCC. He knew the "old FCC" well and has bemoaned the decline of the influence of the technically adroit within the FCC any number of times via his posts in this NG. If you catch him in mood to do so he'll "explain" his views on the matter for you. He's very droll and is always a good read.

Some of my favorite "Philisms":

"The micturition contest will be in evaluating the terms "seriously degrades, obstructs or repeatedly interrupts". What is "seriously"? How much is "repeatedly"?

It will ultimately come down to whose lawyer can shout louder and longer and whether the FCC wants to support amateur radio or BPL.

We are very lucky so far that some provider/power utility hasn't told Riley to go fly a trombone when a warning letter is issued."

- - - -

"The first question that I always ask an opposition witness is swaigned to elicit his/her expertise or standing in the matter. Then we know up front whether or not the individual is (forgive the technical lawyer jargon) talking through a paper a**hole."

- - - -

"The two things that are guaranteed to light my rocket are non-lawyers playing lawyer and non-engineers playing engineer...."

I don't think it is a big deal to them. I doubt that ease is an issue
(and it isn't necessarily easy for everyone)

> 4) Perhaps, as Mike suggests, this administration isn't big on paying attention
> to treaties. Look at the flip-flop on support for the Kyoto treaty back in
> 2001.

It isn't much of a stretch. We must remember that the present
administration is very true to their principles. International treaties
are *not* a popular thing with them. Let 'em know that the change would
be due to a change in the treaty, and wanna make a wager on their reaction?

> 5) Perhaps FCC is more focused on BPL, Howard Stern and Janet Jackson than on
> requirements for a ham license.

Of course. More ideology-based stuff.

Amateur Radio Newsline™ Report 1418 October 15, 2004

Amateur Radio Newsline report number 1418 with a release date of
Friday, October 15, 2004 to follow in 5-4-3-2-1.

The following is a Q-S-T.

The FCC acts on B-P-L amd the IEEE readies a standard for Broadband
Over Powerline hardware. Find out the impact on ham radio on on
Amateur Radio Newsline report number 1418 coming your way right now.

(Billboard Cart Here)

**

THE BPL FIGHT: THE FCC RELEASES ITS BPL REPORT AND ORDER

The FCC has acted to make Broadband Over Powerline a part of the
telecommunications landscape. Amateur Radio Newsline's Paul
Courson, WA3VJB, in Washington and Mark Abramovich, NT3V, in Philadelphia take
an in depth look at the FCC decision and its impact on Amateur
Radio:

-

FCC Michael Powell: "Would all members in favor of the item
signify
by saying aye? All those opposed? The item is adopted, thank you
very much (sound of gavel banging down)"

--

(WA3VJB report) Although several took note of interference concerns,
none of the Commissioners voted against the proposal, and only one
Commissioner voted any dissent at all. His issue was thet utility
companies might improperly try to raise your light bill to help pay
for BPL. The measure passed, and BPL can now be built and marketed to
real customers nationwide.

The system thet's been in the prototype stage for a while now uses
the power lines as a way to transmit and receive telemetry with
computers such as those used in the home. In sending that data over
the wiring in a house or on the poles outside, small amounts of
signal radiate and can cause interference to users of the same
frequencies BPL uses on the power grid.

The ham radio community, led by the research of ARRL laboratory
manager Ed Hare W1RFI, documented the potential for electrical noise

during this prototype and testing phase. The League submitted what many consider alarming findings to the FCC as a protest and challenge to the BPL proposal on ham radio's behalf.

FCC Commissioner Michael Copp addressed that point before he voted to approve:

--

FCC Commissioner Michael Copp: "I remain concerned with the question of interference to amateur radio users. I take the concerns of this community very seriously, and I believe the FCC has an obligation to work hard to monitor, investigate and take quick action to resolve harmful interference. "

--

When Copp voted approval, his dissent focused only on whether there were safeguards to keep utilities from using electricity revenue to help pay for BPL.

The proposal from FCC technical staff calls for interference mitigation procedures, including an online public database to help identify by zip code where BPL might be a source of interference, The database also will name a contact person at the company running the system in that zip code, to negotiate and resolve complaints.

Commissioner Copp said he hopes the processs will be quick:

--

FCC Commissioner Michael Copp: "If an amateur radio user makes a complaint, and an agreement between the BPL provider and the amateur radio user cannot be reached, the FCC should step in and resolve the matter. These cases must not take years to resolve. I hope we'll have some really effective rapid-turnaround procedures here in place..."

--

FCC Chairman Michael Powell has been an early flag-waver for BPL, and spent time leading up to the vote praising its potential as a competitive force against existing high-speed data distribution systems. The noise made by those concerned about BPL noise must have reached the top desk, because Powell took time to acknowledge BPL's potential negative impact, although he never said the word interference in his remarks:

--

FCC Chairman Michael Powell: There are users of spectrum that are affected by this. We've taken that seriously from the very beginning. I want to particularly say to all those wonderful amateur radio operators out there. They're still an important resource to the

American communications landscape. They're ones that we continue to care about, continue to want to foster and prosper. And we have taken great care to ensure that the protections in this item are necessary to allow that service to continue. We will continue to be vigilant about it, and put the tools in place for that.

--

But then Powell returned to his celebration that BPL would soon provide another way to bring high-speed data to the masses, citing advantages for homeland security, the reliability of the nation's power grid, and the U.S place in the world.

--

FCC Chairman Michael Powell: "Let me underscore that the potential
for America, and the American economy is too great too enormous, too potentially groundbreaking to sit idly by and allow any claim, or any possible speculative fear keep us from continuing to drive this technology drive America into the broadband future."

--

For reaction to the FCC's approval of Broadband over Power Lines, we turn to Mark Abramowicz, NT3V:

--

(NT3V report) For the American Radio Relay League, the FCC's decision in the BPL proceeding wasn't a surprise.

The ARRL's leader says now, more than ever, amateur radio operators will have to be vigilant about any BPL interference that appears and be prepared to act with a complaint that could go all the way to the FCC.

ARRL president Jim Haynie W5JBP says there were some encouraging comments from commission members about the value of the Amateur Radio service. And, for the first time, an admission from the panel that BPL technology is far from perfect.

--

Jim Haynie, W5JBP: "You go back a year, a year and a half ago, there was all this talk about: What interference? There is no interference," Haynie recalled. "And fully half of the meeting was how to deal with the interference issue.

"So the commission now has finally realized that what we've been saying all along does exist and I'm sure the N-T-I-A had a lot to do with that, too."

--

Haynie says among the restrictions the FCC placed on the BPL providers is establishing a database of utility and system operators who will be accountable for neighborhood interference complaints.

He says it appears that provision may have come out of the ARRL's direct lobbying of commissioners.

--

Jim Haynie, W5JBP: "We've actually had personal meetings with a number of the commissioners," Haynie says. "And Commissioner (Michael) Copps is one of them. Kevin Martin was another. Ms. (Kathleen) Adelstein was another one.

"And these were all held in the past couple of months so it's fresh on their mind. They know where we're coming from. That's what the league has been doing on a direct basis rather than just file a written petition or comments, which we did."

--

Haynie also credited the direct lobbying efforts aimed at members of Congress - many of whom look favorably on the Amateur Radio service.

--

Jim Haynie, W2JBP: "They've made their feelings known to the commission and while they support inexpensive broadband for America, you know, on the other hand they understand the infrastructure that's involved with Amateur Radio and public safety," Haynie says.

--

Finally, while Haynie says he'll reserve additional comment until reading the full FCC document, he feels some sense of relief at what finally emerged.

--

Jim Haynie, W5JBP: "I know there's some detractors out there that for whatever reason think the league probably lost and sold them down the river. And that's not the case at all," Haynie says. "When we look at what happened at the commission meeting and actually read the details of the report and order, I think what the league has been doing for the last couple of three years will be quite evident.

"So I think we did a good job. Did we get what we want, no - not entirely. But we also knew going in that you can't just say: 'I don't want BPL at all.' It's going to be done in some form or fashion, now the only question is how much?"

--

Over at CQ Magazine, Editor Rich Moseson, W2VU, is feverishly studying what the FCC has done and what impact it will have on Amateur Radio.

He tells me the FCC's press release on the subject seems to contradict the commissioners' assurances that interference mitigation should be done in a timely fashion.

Moseson notes that in the same sentence such resolution of interference problems would be done without disruptions of service to BPL subscribers.

--

Rich Moseson, W2VU: "So, in other words, the users of this non-licensed service have priority over licensed users," Moseson says. "This is what we were afraid of to begin with."

--

Moseson says he's also concerned about the closing comments of FCC Chairman Michael Powell that were not included in the public statement released on the commission's website.

--

Rich Moseson, W2VU: "He starts out practically pandering to hams and then turns around and tells us not to stand in the way of progress," Moseson says.

--

While sounding pessimistic, Moseson says we'll have to wait and see what's in the actual FCC report and order.

With my colleague, Paul Courson in Washington, I'm Mark Abramowicz, NT3V, in Philadelphia.

--

By the way, you'll find the audio comments made by some of the commissioners as a Web Extra feature. You can find them by pointing the browser on your computer to our website, www-dot-arnewsline-dot org. (ARNewsline (tm))

THE BPL FIGHT: IEEE READIES BPL STANDARD

The Institute of Electrical and Electronics and Engineers -- thats the IEEE -- it has begun to develop standard 1675 for Broadband Over

Powerline hardware.

According to immformation at the organizations website, the scope of this standard will be to provide Utilities and Manufacturers standards for the commonly used hardware for BPL installations. Also to provide standard installation, maintenance and operation methods to ensure the safety of both Utility and Non-utility personnel working on BPL equipment.

This project will not cover data transmission, protocols, or other aspects of BPL related to the internal workings of this technology. More information is on-line at http://grouper.ieee.org/groups/bop/ (IEEE)

**

THE BPL FIGHT: HAMS AND CB'ERS UNITE - DOWN UNDER

Still with Broadband Over Powerline issues, word that ACREM, the Australian Citizens Radio Emergency Monitors, have joined the fight against B-P-L. WIA Newsman Martin Howells, VK2UMJ, reports:

--

Following reports that the ACA may be considering the removal of interference protection for some HF radio users, ACREM New South Wales forwarded an official written protest to the ACA, the Minister for Communications, the Shadow Minister for Communications, and the leaders of both major political parties.

This was followed up with a further submission lodged by e-mail outlining the Japanese report that showed interference from BPL as high as 300 MHz. Although ACREM is primarily a CB emergency monitoring group, the interests of all radiocommunications users, including amateur operators, is also a concern especially given the potential safety-of-life issues of widespread interference to HF and VHF frequencies. ACREM New South Wales will continue to play an active role in the BPL fight, alongside the WIA and other groups.

This has been Martin Howells, VK2UMJ, for WIA National News.

--

Asn B-P-L looms in more and more places, users of many radio services are banding together to fight it. The joint efforts of hams and CB'ers in Australia is just one example of what's happening, worldwide. (WIA News)

**

ENFORCEMENT: $10,000 FINE AGAINST JACK GERRITSEN, Ex-KG6IRO, AFFIRMED

The FCC has affirmed its earlier tentative fine of $10,000 against unlicensed Los Angeles area radio operator Jack Gerritsen, the former KG6IRO. This for operating radio transmitting gear after the agency

set aside his license.

As previously reported, on June 15th of this year the Commission's Los Angeles Field Office issued a Notice of Apparent Liability for Forfeiture to Gerritsen in the amount of ten thousand dollars. This, for Gerritsen's apparent, willfull and repeated violating of Section
301 of the Communications Act by operating a radio station in the Amateur Radio Service without authorization from the Commission to do so.

Gerritsen sent in a response to the notice on July 13th. In his filing Gerritsen claimed that he has a valid amateur license that permits him to operate on all of the radio frequencies detailed in the Notice of Apparent Liability and that that the FCC's earlier action to set aside of his amateur license and KG6IRO call sign was unfounded. He also claimed the set aside did not prohibit him from transmitting on the amateur radio bands given his claim that his amateur license was valid. Also, that any possible suspension of his license is also pending a hearing before an Administrative Law Judge and that it makes the Notice of Apparent Liability moot until any suspension occurs.

Well that might be Gerritsens interpertation of the FCC's decision
but its not shared by the agency. In affirming its decision to require him to pay the ten thousand dollar fine the FCC says that Gerritsen has no license. Just a pending application. Therefore there is no license for the Commission to suspend that the correspondence sent to Gerritsen from the FCC informed him that his amateur license had been set aside. As such the FCC did not grant him an Amateur license nor any authorization to use the amateur frequencies.

In closing, it found that Gerritsen is fully liable for a monetary forfeiture of in the amount of ten thousand dollars. It gave him 30 days fropm the October 5th release of its decision to pay. If he fails to do this in thr alloted or the FCC says it may be referred to the Department of Justice for collection. The full story is on line at http://hraunfoss.fcc.gov/edocs_public/attachmatch/DA-04-3183A1.doc (FCC)

**

ENFORCEMENT: TO MANY CALL SIGN CHANGES

The FCC wants to know why a California couple has been requesting and then cancelling call signs. The agency's Daryl Duckworth, NN0W, explains:

--

Duckworth: "NN6AA, Edward Beluso, of Redding, California, has
been
asked to provide information on about a dozen licenses that have been
granted and canceled since June of 1999. These filings raise
questions as to whether these are being filed in order to block
future assignments of the call signs and the legitimacy of those that
were issued for clubs.
At the same address, WA6JAN, Janet Beluso, has also been asked to
supply information regarding five call signs."
This is Daryl Duckworth, NN0W, reporting."

--

The FCC gave the Beluso's the usual amount of time to respond.

RESCUE RADIO: KKOB TOWER HIT BY HOT AOR BALLOON

KKOB-AM radio in Albuquerque, New Mexico, had to shut down its 50,000-
watt transmitter for several hours on Sunday, October 10th. This,
after a hot air balloon got tangeled at the top of the stations 700
foot high broadcast tower. Amateur Radio Newsline's Norm Seeley,
KI7UP, has more:

--

According to news reports, Bill Chapel was flying the hot-air balloon
when it blew into the tower near a park where the Albuquerque
International Balloon Fiesta was being held. The lines supporting
the airships canopy got wrapped around the triangular shaped tower.
This left the gondola resting up against the antenna structure with
the straps securing it to the balloon tangled in the antenna
structure.

Chapel, and passengers Aaron Whitacre, 10, and Troy Wells, 14,
successfully got out of the gondola and onto the tower. They then
began the long climb down the antenna structures ladder.

At the 100 foot level they were met by a group of trained rescue
worker. The rescue team secured the trip with safety gear, and
helped them into a utility truck bucket for the last of the trip back

to mother Earth. Tower maintenance crews then got to work removing the remainder of the balloon from the antenna structure.

Nobody was hurt in the incident and the station resumed normal operation once the remnants of the balloon were removed.

For the Amateur Radio Newsline, Norm Seeley, KI7UP, in Scottsdale, Arizona.

--

The Federal Aviation Administration and National Transportation Safety Board are reportedly investigating the incident. The Albuquerque International Balloon Fiesta has been flying since 1972. (Published news reports)

**

RESCUE RADIO: WAYS TO WARN

Scott Marks, KI4GGU, says via the WIA News that Israel has developed an emergency public notification system called Silent Radio. This is a regular FM station that remains silent until some kind of emergency situation takes place. Once it receives an alert, it takes to the air to issue any required information to the Israeli public which already knows where to tune in. Kind of the the old Emergency Broadcast System we had here in the U-S-A before the 1990's upgrade
to E-A-S that is supposed to warn a lot more people but is also requires special decoding equipment and is very complex. (WIA News)

**

RESCUE RADIO: WAY NOT TO WARN

Meantime, over in the U-K, Bob Sayers, G8IYK says the Emergency Planning community in the that nation has tried to have something like the Israeli alert system established for many years. Unfortunately, they always get the same response from government officials ewho say that it would be prohibitively expensive.

In fact not so long ago the nation-wide warning siren network, set up in World War 2 but retained and improved upon throughout the Cold War period, was scrapped. The reason was the same. No money to maintain it. (WIA News)

RADIO HEALTH REDUX: IS THERE A CANCER CONNECTION TO HIGH POWER RADIO TRANSMISSIONS

A follow up to last weeks story on the risks associated to R-F exposure from living near a high power broadcast station. Bob Gonsett, W6VR, points a report in his C-G-C Communicator that discused the same subject. Amateur Radio Newslie's Bruce Tennant,
K6PZW, reports:

--

Two years ago an Italian study found death rates from leukemia increased dramatically for residents living within two miles of Vatican Radio's powerful array of transmitters in Rome. Now, as reported last week, Wired Magazine says that Korean researchers have looked at the death rates in 10 regions with AM radio transmitting towers broadcasting at more than 100 kilowatts. They compared them with control areas without transmitters, and claim to have found substantially higher cancer mortality rates among those who lived within two kilometers of the high power transmitters.

But says the CGC Communicator, the problem with the Vatican study is that it was relatively small in the size and lacked exposure data. Also, the new Korean study has not even been published. As a result, this is all speculative and based on some rather sketchy pre release information.

Clouding the picture is the statement of Epidemiologist Mary McBride of the British Columbia Cancer Agency also reported in Wired magazine. It quotes Mc Bride as saying that there have been many studies like these, and they just are not very convincing.

For the Amateur Radio Newsline, I'm Bruce Tennant, K6PZW, in Los Angeles.

--

The bottom line to all this. Its going to take more than just scientific speculation to know foe certain if there is any affect at all from living close a a high power broadcast transmitter. (CGC)

NAMES IN THE NEWS: AMSAT ELECTIONS RESULTS ANNOUNCED

Some new names and some old will be running AMSAT North America the next year. This, with word that Rick Hambly, W2GPS, has been elected President of the Amateur Radio space authority at the organizations October 7th Board of Directors meeting.

Hambly replaces Robin Haighton, VE3FRH, who has headed up AMSAT North Ameriuca the last seveal years. Also elected or re-elected are are Lee McLamb, KU4OS as Executive Vice President, Mike Kingery, KE4AZN as Vice President Operations, Stan Wood, WA4FNY taking the task of Vice President of Engineering, Barry Baines, WD4ASW as Vice President Marketing and User Services, and Frank Bauer, KA3HDO as Vice President Human Sapceflight. Gunther Meise, W8GSM, will be taking the Treasurers spot for the coming year as well.

Also at the meeting status reviews were presented of several undertakings. These including ongoing projects such as the Echo satellite and the launch of future hamsats including Eagle. The Board also had continuing discussions on regulatory matters, most importantly the impact of FCC Report and Order 04-130 which deals with the subject of Orbital Debris. (ANS)

**

RADIO IN SPACE: MESABA THE IRANIAN SATELLITE

SpaceDaily reports that Iran intends to launch its first satellite in April 2005. The bird named Mesbah is said to be a tewenty in square cube weighing in at 132 pounds.

Plans are to put it int a Low Earth Orbit at about about 560 miles. The satellite will be used to identify natural resources, control the nations electrical and energy network and can also be used by communications and crisis management teams the press reports said. (ANS)

**

WORLDBEAT: SA HAMS DID NOT LOOSE 2.4 OR 5.6 GHZ

South African Amateurs have not lost access to either the 2.4 and 5.6 GHz band. Its just a government typo. At least thats what South Africa Radio League president, Graham Hartlett, ZS6GJH, is saying ane he should know. Thats because he set out to investigate why both pieces of spectrum were not listed to that nations ham radio community.

Now Harlett says that he has in hand a communication from the nations radio regulatory body. It tells him that the 3.4 and 5.6 GHz allocations for amateurs had been accidentally omitted from the last publication of the band plan in the Government Gazette. Harlett was assured that this will be rectified in the next band plan

publication. (WIA News)

**

SPECIAL EVENTS: KØAIR/KØGRL TO CELEBRATE VETERANS DAY

To recognize Veterans Day and the birthday of the legandary General Curtis E. LeMay, the Strategic Air Command Memorial Amateur Radio Club will be operating K0AIR and K0GRL on Thursday, November 11th. The stations will be on the ait 1200 to 2400 hours UTC in the general phone bands on or near to the following frequencies ending in 47. Thhis 3.947, 7.247, 14.247, 21.347, and 28.347 Mhz depending on propagation and time of day. Six and two meters will also be activated 51.47 and 146.46 Mhz. For QSL information please visit www.sacmarc.org on the World-Wide-Web.

**

DX

In D-X, word that a group of seven German operators is active from the Chesterfield Islands for eight days beginning about the 16th of October depending on weather conditions in the area. The Chesterfield Islands are located between Australia and New Caledonia. Once on the air, activity will be on 160 to 6 metres using CW, SSB and RTTY. The callsign will not be announced before operations start. QSL as directed on the air. (OPDX)

And YT1CS is active portable 5Z4 from Kenya until 18th of November. He orks only SSB on 20 and 15 metres. Previously he was signing the rather convoluted call of 5Z4YT1CS until the Kenyan licensing authority re-inserted the 'stroke' mark in the callsign. (RSGB)

Lastly, seven operators from Germany and Poland are active as TJ3SP and TJ3FR through October 20th. They have four stations on all bands and modes, except 160 and 6 meters. These two bands are not licensed for use in Cameroon. (OPDX)

**

THAT FINAL ITEM: THE HISTORY OF JOTA

And finally this week, its the time of year for Jota -- the scouts annual ham radio Jamboree on the Air. Last week we told you about the event as it is today. Now we take a look back in time to the beginning of the Jamboree with John Williams, VK2BUI.

--

Jamboree On The Air is the largest annual international event in the Guides and Scouts event calendar, when thousands of Girl Guides and Scouts from all over the world gather for a weekend to contact each other by radio, share ideas, participate in many activities, make friends and learn new skills.

Like a lot of successful ventures, JOTA had a small beginning, and whilst Scouting utilised radio in its program in some areas for a number of years, it was not accepted as an official part of the Scout program until the 1957 Jubilee Jamboree at Sutton Park Coldfield, near Birmingham in the United Kingdom.

It was here that a very successful amateur radio station was set up, but amongst the sixty plus operators present, only two were in uniform, one of whom Mr Les Mitchell G3BHK.

As this was the only activity at the Jamboree not conducted with a full Scouting Staff he was rather disappointed, feeling that in the true spirit of such a wonderful international Scout activity all Scouters should have been involved in the manning and operation of this station.

His concern led him to call a meeting of overseas Scout radio Amateurs present at the Jamboree and during one of their meetings they decided to keep in touch with each other on air and ensure their availability, if possible, as station operators at future World Jamborees.

Initially one day a year was proposed, but thinking this over later Their nominated Organiser Les Mitchell suggested they consider inviting amateur radio operators throughout the world to join them instead in a special weekend each year for a Jamboree on the Air at which, hopefully, Scouts and leaders would be able to talk to each other throughout the world

That's 12 amps @ xxMHz -- don't forget about skin effect. At 30 MHz
with 12 AWG copper you will end up radiating about 22 watts per foot
in the form of heat. And to put that into perspective, most small
soldering irons are 15-30 watts.

> Bill, they still do... :-)

Not sure who "they" are. I'm just noting that it is a treaty matter,
and that the powers that be don't like treaties. My guess is that if the
requirement is removed from a treaty and the folks in Washington know
that, they will oppose it on the basis that they don't want to be told
what to do by the rest of the world.

Despite my PCTA status, When Element one goes away, I'll note it, and
enjoy my morning coffee just like any other day.

Many middle aged (and up) males astound me with their ability to get
incredibly angry about "things" "When Morse code goes away. It'll just

be like CB" or the one I always get to hear "Any idiot can become an Extra these days" - when they forget that I am one of those any idiots. And its not just Hams - could be just about anyone on just about any subject.

But I isn't one of them! 8^)

No response because I don't read most of what "William" writes here. I
only saw this because it was quoted by Steve.

Besides, why should I answer "William's" questions when he won't
answer mine? Also, I've already answered the above question in another
post.

> Even if the operator can type 120 WPM, if s/he can't be interrupted in the
> midst of the string and asked for a repeat, as a good QSK CW operator can,
> then
> that error will exist until the end of the transmission and the error
> resolved.

That's a side benefit.

Here's the plain facts:

The speed and accuracy of *any* mode that requires a human operator is
highly dependent upon that operator's skill. Doesn't matter if it's
done with a key, keyboard or microphone. If you have 10 wpm Morse
operators, you have (at best) a 10 wpm system. If you have 10 wpm
teletypists, you have (at best) a 10 wpm system regardless of what the
maximum speed of the system is rated. Same for voice.

That's just common sense.

The use of prerecorded storage can speed things up somewhat if, say, a
10 wpm teletypist is punching tape while receiving. But that takes the

systems out of real-time communications. One could prerecord Morse and transmit it at high speed, as was done over 60 years ago, just as well.

The basic fact is that Morse code is *not* the slowest mode available to hams.

> Assuming the interruption it to tell the transmitting station that it's
> ALL garbled, your 60-100WPM teletype just became zero.

Yup.

Various forms of error detection and correction, checksums, ACK/NAK and other methods can do a lot of that stuff automatically. At a cost in speed, of course.

But that's not really the issue.

> A bridge out in the middle of the Autobahn means everyone goes zero until
> the bridge is replaced regardless of what the thoroughfare will otherwise
> allow. Same thing.
>
Exactly!

Or:

The bridge is down to one lane in each direction, and the speed limit is such that only 1/10 as many cars/hour get through as would normally be able to use the bridge. The effective capacity of the road is then reduced to 1/10 of normal (between the exits before and after the blockage).

GLENN

YOU ARE A GOD! ONE OF THE VERY FEW WITH ENOUGH BALLS TO STAND UP TO
THE LIKES OF THE ARRL AND ITS MOUTHPIECE RILEY.

KEEP UP THE GREAT JOB GLENN.

YOU ARE DEFINATELY THE M-A-N!

ONE OF YOUR ADMIRERS

Good point, and the rec groups aren't near as bad of spam dumps as the
alt groups are. If it's spam his ISP or NSP will shut it down real
quick in most cases.

The downside is: If you want to go anywhere, its a fur piece down the
road.

> >> So I am wondering, looking at their relative retirements, why I should be
> >> interested in following Len's example rather than Dave's.
>
> The more I think about it, the more I like Dave's example and the less I like
> Len's. Judging by the results at retirement, anyway.

The results, aside from location, are pretty much the same. I am
"retired from regular hours" I've even been known to pay CASH for
things and could provide examples more recent than twenty years ago.

> >> There's a one-paragraph profile around here somewhere....;-)

While it wouldn't make a dent in an amateur radio policy matter, I'm
betting that it would make a difference in Len's behavior. It would
likely become worse.

> >> >I didn't see any statement about someone else having money, Leonard. We

Hello, Hans

C'mon, you know better than that. Perhaps the point is that equipment sold in the United States is *supposed* to be (and likely was) checked for radiated emissions. In my opinion, it should also be checked for radiated immunity, but that's another story. Also, conducted emissions are checked and now they even check if a system is distorting the AC mains! That was coming on line when I left the test lab in 1996.

Of course, commercial equipment can and does fail at times. I remember we blew out the power supply of a monitor when we were irradiating the device under test with 3 v/m unmodulated rf at around 220 MHz. The picture started to tear and then the breaker tripped. Couldn't get it going again.

The FCC is preoccupied with authorizing BPL and as long as government communications don't get hosed, they don't care. Apparently, however, they don't like false signals being sent on distress frequencies. They should stop being a mouthpiece for the current administration and power companies and get back to trying to make the airwaves a viable shared service for all.

Best regards from Rochester, NY
Jim AA2QA

Turns out that 121.5 is the 9th harmonic and 243 the 18th
harmonic of a commonly used digital TV sampling frequency
of 13.5MHz, used in DVD players. Some shielding inside
must have come apart in that TV. And the errant signal
travel up to an antenna or cable connection to leak out.
This has been a concern in the digital TV manufacturing
community.

Of course I know better than that!

And so does Jim.

A single example of this product developed some sort of birdie/spur on
121.5. Nothing more, nothing less.

Of course the story makes good news copy on a slow day, but it's hardly
a remarkable incident, and certainly not a reason to make snide innuendo
about "Designed And Built By PROFESSIONALS". Neither is it a reasonable
basis for a jeremiad about the FCC shirking their responsibilities.

Sheeeeesh!

I've never heard of that, but I >>have<< heard of skilled operators who make no effort to send machine perfect code, and who in fact take some pride in sending Morse with some personality.

There are a couple of reasons for this seemingly maverick behaviour.

Reason #1: Before the days of "electronic precision" in keying, Morse was a manual art. An operators fist was a second "signature", and many operators cultivated a distinctive style. This was especially true where more than one operator shared a single call sign. You could tell who was on watch at KFS by the fist of the operator.

Even with the advent of electronic keyers, some of this old preference exists, and I must admit I get pretty bored with the machine-perfect-sterile-without-personality Morse we hear today. It sounds like robots talking to robots. If you ever heard the melodic fist of pioneers like W4KFC, you would not have asked the question. <grin>.

Reason #2: Under "less than ideal" conditions, a little overweighting with emphasis on the DAH seems to make copy a bit easier.

How much do you guys want to bet that
someplace on the Toshiba TV are those
inevitable words of warning: --> "MADE IN CHINA".

(no doubt having a UL and a CSA and an
FCC Part 15 Certification also..??)

Want to have some real fun? Try this!! (below)

If you own a "whitebox" computer [..meaning one
of those cheap cobbled-together Chinese Component
computers you get at the monthly PC show from
Hoo-Fong Voo who just got off da boat from
Chunking or Saigon], set up a Spectrum Analyzer
about 10 feet away with a rubber duck antenna
on it in capture mode. Pull off the cover of the PC
and fire the sucker up and have a look at the S.A.

It will throw off more stray RF crap than a
GE Microwave Oven or Brother RG Stair on a
rainy day on the short-wave... How the heck do these
things make it into the USA consumer market and get
sold? (most of em have counterfeit FCC and UL
symbols silkscreened on the motherboards, ever
notice that? The switching power supplies in these
things are nothing short of a firetrap also)

K1MAN EDITORIALS -- WD4AWO (Dumbo Bobbie) KB1EVE aka WA1BHV (Summers Eve)
When will the 500 lb Michael Moore look alike ND8V (November Dumbass 8
Vomit) chime in???

It is evident that Glenn is a maniac and needs to be studied while he is
safely housed in a rubber room. However, he is one of very few individuals
who have the necessary steel balls to stand up to Riley. Unfortunately for
Glenn's response that his station is in compliance is totally ridiculous. On
Monday, October 11, 2004 Steve - W7CI and I made repeated requests on 14.275
for the control operator to confirm that the K1MAN station was indeed in
compliance with the following FCC Part 97 Rules:
97.105 (a) - Control operator duties
97.109 - Station control
As expected we received no reply from a control operator for the K1MAN
transmissions. Therefore, since the K1MAN station is NOT in compliance any
and all legal transmissions by amateur radio stations should not be
harrassed by K1MAN or his entourage with threats of legal action,
specifically the filing of Felony Affidavit Complaints.

73,
Bob WD4AWO

MHR Comment: Keep in mind, WD4AWO can't even address an envelope. Don't
believe me, here's his QRZ BIO.

VIA U.S. ADDRESS ONLY
I DO NOT RESPOND TO ANY BUREAUS/QSL SERVICES
U.S. STATIONS INCLUDE SASE
OTHERS - SAE & IRC OR SAE/80 CENTS US POSTAGE
SAE IS IMPORTANT TO AVOID ADDRESS ERRORS
IT IS SAFER FOR YOU TO ADDRESS THE ENVELOPE
DO NOT INCLUDE ANY CALLSIGNS ON ENVELOPE
73,
BOB
Bio last modified: 2004-08-12

Believe it or nuts: I agree with my good friend WD4AWO. but I would say they
are brass balls, not steel. Glenn is totally nuts!! I tried calling the 800
number and it took me 4 times to just leave a message. Forget when he
broadcasts on 75, he just ain't there, Also, Rich has a point: But the
ARRL has been along since ham radio's inception via W1AW. Glenn has the
money and the balls to say "why not me" K1MAN's broadcasts are very
technical and promote ham radio and make an (other) attempt to intice young
people to get bit by the Radio Bug. K1MAN makes an attempt to promote ham
radio. That's a good response by a lawyer in front of an ALJ. Isn't that

Riley's prime objective? To improve ham radio, and get rid of the international embarrassment due to 14313? It was complaints about '313 that pulled the heat on us.
Peace
WA1BHV
me in 07
and Hillery in 08.

MHR Comment: Getting rid of Summers Eve from 20M was a major improvement.

K1MAN RESPONSE:

Bulletin stations do not have to respond to callers on the frequency while the bulletins are being transmitted. Try calling W1AW! This IS NOT rocket science.

AARA and IARN do not have to answer the phone. We will call you back is we want to. The control operator of K1MAN can be anywhere in the world at a given
moment. This is a little closer to rocket science.
Hellllllllloooooooooooo!

73 and GL

Glenn/K1MAN

790. Kalamazoo Cuckoo' ND8V

THE LIFE OF RILEY

Or why Mikee 'Kalamazoo Cuckoo' ND8V was "in like Flynn" and continues to lead a charmed existence with Riley 'Rot' Hollingsworth K4ZDH

Once upon a time in America there came to be a giant of an organization called the American Radio Relay League (ARRL).

Much later, there appeared a shy and lonely radio amateur with the 'self-effacing' call sign K1MAN [HI, HI].

Sometime, somewhere, somehow yet later K1MAN came to the rather obvious conclusion that large organizations/associations, such as the ARRL or the Federal Communications Commission (FCC), in time lose touch with the constituents they are supposed to serve. This was not news, in that it has always been so.

Unlike others, who only 'bitched' about it, however, K1MAN decided to start a Bulletin service on 14.275 MHz a la the ARRL's W1AW in part to poke sticks into the respective eyes of both one-eyed Cyclops.

Surprise, surprise, the ARRL/FCC did not put K1MAN on their respective Christmas card lists.... Rather, they attempted to shut K1MAN down. Years and much effort later, they appear to have failed, at least to the extent that K1MAN remains on the air.

Concurrently and arguably partly as a result of K1MAN's so-called "bad example", a group of rogue Citizens Band (CB) operators with an amateur licence [and others without], decided to congregate on 14.313 MHz which frequency in time became a veritable 'zoo'. This was during the time when the amateur spectrum was supposedly 'self-governing/policing'....

Then, some four years ago the ARRL reportedly proposed and the FCC agreed to hire one Riley Hollingsworth K4ZDH as a 'radio cop', to clean up the 'amateur beat' generally. In reality, there were arguably only two items on Riley's immediate agenda: K1MAN on 14.275 MHz and the mess on 14.313 MHz but for the obvious and not so obvious reasons, very much in that order.

Unfortunately K1MAN had in the meantime contracted to teach full-time and as a consequence had to take a sabbatical from producing the time-consuming Bulletins. Then, at a series of 'hamventions', Riley the radio cop apparently loudly took credit for driving K1MAN off the air.... This played well at the FCC and among the 'great unwashed' and uninformed in the amateur community and earned Riley the moniker 'The Rotweiler'. Predictably, this had the same effect on K1MAN as a scarlet handkerchief has on a bull. K1MAN consequently let it widely be known that he would be back with a vengeance and as they say in show business, the stage was set....

In the meantime, Riley continued to ineffectively try to come to grips with the zoo on 14.313 MHz. ND8V a.k.a. 'Kalamazoo Cuckoo' to friends and detractors alike, was one of the chief rabble-rousers there. He had attacked Hispanic-speaking stations "for years" calling them cockroaches, interfered

with a maritime mobile net and threatened--on and off the air--any number of amateurs who stood up to his bullying. Throughout this, Riley did virtually nothing. Then, when even the US military reportedly had enough of ND8V's behaviour and caused a search to be made of his station, Riley 'The Rotweiler' was finally forced to act. He severely beat ND8V up--with a 'wet noodle'--by supposedly suspending his High Frequency (HF) privileges for a curiously 'pregnant' nine months! This again played well at the FCC and even in the amateur community, to whom 14.313 MHz in general and to some ND8V in particular, had become such an acute embarrassment.

Unfortunately, Riley had for some strange reason also made a 'Faustian bargain' with ND8V in part to the effect that if he behaved himself for the duration of the suspension, he would [surprise, surprise] be rewarded! All of his past sins were to be forgiven and forgotten--and what is most perverse--could not be used against him in subsequent disciplinary proceedings.... [Obviously, someone had turned their mind to the possibility--some say inevitability--of subsequent disciplinary problems. Who? Why?]

Interestingly, as part of this Faustian bargain, Riley apparently forbade ND8V to operate on 14.313 MHz--something he may not have had authority in law to do. But what is truly odd, when ND8V returned to HF--surprise, surprise ~a month before K1MAN's published intension to resume his Bulletins--he relocated to 14.275 MHz! With virtually the entire 20 m Band for ND8V to choose from, this was not entirely serendipitous....

ND8V returned to HF in September 2001 after 'serving' only eight of the nine month suspension [Riley can't count] and virtually immediately was [surprise, surprise] back in trouble again. Riley was again forced to use the wet noodle, i.e. to issue another Warning Letter that, for reasons still unclear, but likely related to the Faustian bargain, appears to have again 'gone away' without significant or indeed any consequences.

Immediately upon K1MAN's return, he was [surprise, surprise] subjected to organized and vicious interference (QRM) by ND8V and his toadies from the zoo on 14.313 MHz now increasingly congregating on 14.275 MHz. [Interestingly, most of these were/are from the 4th Call District.]

Riley/the FCC reportedly sat back and listened, but pointedly took no action. Curiously, however, between this relentless QRM'ing and otherwise bad mouthing of K1MAN and inconvenient/neighbouring others, ND8V could be heard loudly praising Riley--in nauseating fashion--the just completed suspension and by now extensive 'rap sheet' at the FCC and elsewhere notwithstanding.... Things were getting curiouser and curiouser....

Within yet another month or two, ND8V organized another attack, this time on a Polish-speaking amateur from New York City (the New Yorker), on the neighbouring frequency of 14.273 MHz for in effect usually speaking in a foreign language and being too close to "his" newly chosen frequency. Now, 14.273 MHz had for only some fifty years unofficially been known/used as the worldwide 'Polish Calling Frequency'. For the obvious reasons, many consider such informal arrangements a very effective and efficient use of the radio spectrum. But, this was shortly after "9/11" and ND8V's apologists say that he should be forgiven for this misguided sense of 'American patriotism'..

Surprise, surprise, this attack on the sometime Polish-speakers generally

and on the New Yorker in particular had a similar modus operandi (MO) to that used a year earlier on the Hispanics! ND8V also in quick succession organized his toadies from 14.275 MHz to write two transparently fictitious complaints to Riley against the New Yorker. Perversely, these involved allegations of 'perceived' overly-wide signals and interference no less, backed up by the 'thinnest' of malicious 'drivel' off the Internet. One concerned chiefly what were clearly fraudulent rebroadcasts of the New Yorker's CQs [they taped and retransmitted his signals on top of their own and then complained to Riley about it!]. To even casual observers, this was/is the well-known MO of CB'ers and together with voice imitations, was/is a recognized specialty of the zoo in general and ND8V in particular. As such, the complaints were an obviously 'put up job'.

Nevertheless, without checking the bona fides of the complaints or their chief instigator/organizer, or apparently doing any independent investigation whatsoever, Riley obligingly quickly issued two Warning Letters in succession to the New Yorker. These were then published on the ARRL website. This was/is Riley's standard operating procedure. Several knowledgeable and legally trained observers have aptly called this approach to enforcement "Trial By Press Release". [The ARRL's by-and-large noble institutional memory should be ashamed to be party to this.]

These Warning Letters emboldened ND8V who was then openly heard bragging to his toadies that he would drive the sometime Polish-speakers off the neighbouring frequency in general and the New Yorker off the air in particular.

Then, two of the sometime Polish-speakers on 14.273 MHz [one American and one Canadian] stepped into the breach and attempted to defend their fellow amateur..

Initially, first the American and then the Canadian helped the New Yorker draft and send three lengthy and increasingly detailed double-registered letters of reply to Riley--not one of which to-date has even been acknowledged!

The American then sent a double-registered letter covering an audiotape evidencing malicious QRM and a death threat to the New Yorker uttered by none other than--surprise, surprise--'Dumbo Bobbie' WD4AWO--one of the original complainants and ND8V's regular toady from the backwoods of Tennessee. For some curious reason, Riley has not to-date deigned to acknowledge this serious incident either..

Over the next several months the Canadian followed up with some 20 detailed e-mails, each one evidencing at least one instance of serious malicious QRM by ND8V. After several insistent prompts Riley finally laconically if inarticulately acknowledged some of these--not to be confused with answering them--but of course he did nothing substantive about them as usual..

Then, after about six months of this benign neglect--and worse--and the continuing vicious attacks by ND8V, Riley finally attempted to placate the increasingly irate Canadian by advising that he would hold a review of ND8V's licence status at his upcoming renewal time. Inexplicably, however, a couple of months later, Riley/the FCC renewed ND8V's licence without any review whatsoever! When confronted about this by the Canadian, Riley professed utter surprise and blamed the supposed error on some

administrative 'foul-up'. Others thought/think otherwise..
Then, after nearly a year of inaction and 'flip flops', the Canadian finally read Riley the 'riot act'..
Riley's reply to this 'dressing down' was apoplectic, but informative for a change. He wrote that the Canadian should not bother him with "blow-by-blow" details--each one carefully crafted as a possible exhibit to any number of affidavits! Riley also stated that he had "just noticed" that the writer was a Canadian amateur!! This, recall, after more than 20 e-mails, all except one of which [a forward from the American] were very clearly identified with a Canadian call sign!!! The logical conclusion to be drawn from this is that Riley is either grossly inattentive to detail and/or that he doesn't recognize a Canadian call sign when he sees one some 20 times in succession and/or that he is disingenuous [for those not familiar with the last word, look it up under "L" in the dictionary]. Irrespective, Riley thereby very arguably proved himself to be unfit for the important position that he holds..
In his reply, Riley also unilaterally changed 'the rules of engagement' in mid-stream and suggested that the Canadian send him audiotapes instead of the blow-by-blow e-mails. It is interesting to note in passing that the form of complaint to the FCC is nowhere specified. In fact, an FCC Commissioner had shortly before this delivered a 'rocket' to the Enforcement Bureau [of which Riley is Special Counsel, you might recall] on this very point. Also, there are serious and possibly insurmountable evidentiary problems with tapes made by 'various and sundry'.
Nevertheless, the Canadian subsequently sent Riley a detailed letter covering a tape recording of a typical example, among others, of ND8V's usual sociopathic QRM. This incident was even independently corroborated by a station from California--which was 2 kHz down and was contemporaneously also maliciously QRM'ed by ND8V--and luckily caught on the same tape! Despite this 'double whammy', from two independent sources that did not previously know each other, Riley never replied to the Californian [a retired Sergeant of police, incidentally] and only grudgingly acknowledged the 'pesky' Canadian. But, to-date, he has taken no substantive action on the incidents as usual..
All the while ND8V perversely continued to praise Riley on the air as if he were his 'long lost bud' and bragged about unprecedented access to and sometimes daily telephone contact with him [while practicing attorneys regularly could not get through].... To subjective and objective observers alike, things were not only getting curiouser and curiouser, but increasingly bizarre....
Then on 25 November 2002 Riley wrote ND8V an unprecedented strong Warning Letter noting that the FCC continues to receive complaints about him concerning the ".appropriation of certain frequencies." and ".interference to certain operators". Riley inter alia cautioned that: "Any future incidents.even a single incident, will result in a monetary forfeiture and revocation proceeding against your license" and requested that ND8V refrain from operation on the 20 m Band. This unprecedented '.last warning, to last warning, to last warning, etc....' was again based on multiple, independent and well-founded complaints from several amateurs operating tens of kHz

apart. At least two of these complaints were from mature, highly credible and wholly independent sources who did not then even know of the other's existence [but Riley obviously knew--and gave both the "mushroom treatment"]. Interestingly, both of these sources were also legally trained.. Moreover, one of the complaints was in addition reduced to/backed up by a very persuasive/extensive Statutory Declaration/Affidavit..
Surprise, surprise, distressingly similar historical fact patterns and well-founded/drafted independent complaints notwithstanding, ND8V was able to dispose of them via only one "private" telephone call to his 'bud' Riley! Therein, in true sociopath style [aided by his "calm voice characteristics" no doubt--ND8V later bragged about this on-air], he simply described the multiple independent and unconnected complaints to Riley as "all lies". Now Mikee is an accomplished practitioner of 'The Big Lie' approach. But, what is nevertheless so inexplicable and bizarre in the circumstances is that Riley obviously 'bought' this preposterously 'thin' excuse!
STOP PRESS!
SPECIAL COUNSEL RILEY 'ROT' HOLLINGSWORTH K4ZDH AGAIN SNOOKERED BY 'CALM VOICE CHARACTERISTICS' OF MIKEE 'KALAMAZOO CUCKOO' ND8V..
After receiving such 'unimpeachable evidence to the contrary' from ND8V--Riley then shamelessly rescinded the Warning Letter--before it was even published!!!
This again of course only emboldened ND8V who then sold his perfectly serviceable FT-1000D and bought an IC-756 PRO--so as to more effectively 'keep watch' on and 'splatter' the sometime Polish-speakers especially, in what he instructively called "War Mode". Subsequently, according to ND8V and his toadies, 14.275 MHz and vicinity was "always occupied", even when no one was using it! ND8V published a "schedule" to that effect on QRZ.com and anyone--but especially the sometime Polish-speakers--attempting to use any frequency between ~14.270 MHz and ~14.280 MHz would then immediately be 'stomped on' and/or [surprise, surprise] loudly and perversely be accused of interfering with him!
If a few of the sometime Polish-speakers [eventually there were only two!] could not thus be chased off and stood their ground, ND8V would then threaten them with being reported to his "friend and lawyer", Riley. For effect, he would even occasionally pass out Riley's direct/private telephone numbers! He also repeatedly threatened the Canadian with a report to Industry Canada (IC), the Canadian equivalent of the FCC [and equally ineffective]. All the while ND8V's regular toadies [chief among them 'Rambo Dan' W4NTI, 'Dumbo Bobbie' WD4AWO, 'Rude Rube' K4RUB and 'Miami Boob' W4ASX to partially name only a few of the more unbalanced and guilty], were ready and more than willing in the background to uncritically back him up in whatever he said or did.. Soon, no one--'rednecks' from the 4th Call District and/or ND8V's usual sycophants excepted--was safe in the middle of the 20 m Phone Band! All the while Riley/the FCC and even IC, despite being repeatedly advised, did nothing..
The American subsequently sent Riley another handful of double-registered letters covering some dozen tapes/instances of serious malicious QRM by ND8V. But of course Riley did not acknowledge this considerable effort and expense either..

Then in February 2003 ND8V together with his toadies organized a series of vicious on-air attacks on the two sometime Polish-speaking holdouts. That these attacks were also premeditated, organized and racially/ethnically driven is beyond question. Several amateurs and even a short-wave listener independently reported ND8V and his toadies 'laying in wait' and preparing for them as such. The attacks were on an unprecedented scale and of ferocious intensity. Many of them literally lasted for hours! Some again involved repeated threats of death and/or bodily harm..
Fortuitously, all of these attacks were taped--including the all-important beginnings--both by the American and the Canadian. This should have 'put paid' to 'who was on first, first and who second', who attacking and who defending, who calling whom racial/ethnic slurs, who threatening, etc. Riley/the FCC [and sometimes IC] were contemporaneously informed and on occasion provided the tapes and/or access thereto.
But again, nothing constructive materialized--actually, quite to the contrary..
Surprise, surprise, 'Kalamazoo Cuckoo' ND8V and 'Rambo Dan' W4NTI--those paragons of American radio amateur virtue--verbally reported the Canadian to IC and the American to the FCC! Because Mikee can't write, the manner in which they did this is again instructive. First, they repeatedly read out the respective and sometimes toll-free telephone numbers using a continuous loop feature and fraudulently exhorted anyone and everyone listening to call in a complaint. Then [surprise, surprise], they conveniently called the numbers themselves! This, perversely, after first viciously QRM'ing and threatening the American and Canadian--for more than three hours--using the usual full legal power +, a five element mono-bander [typically directed at the Canadian, because the American was too close], in splattering War Mode. All of which, including again as to who first properly occupied the frequency, etc., was/is unequivocally evidenced on tapes independently provided Riley by the American as well as the Canadian!!
Surprise, surprise, the ephemeral nature of verbal complaints and the supposed requirement for tapes/hard evidence, etc., notwithstanding, both of these 'august' organizations were then perversely apparently speedily preparing to act--against the two 'recalcitrant' sometime Polish-speaking holdouts--who so "unreasonably" refused to be driven off any frequency they first lawfully/properly and demonstrably occupied!!!
Almost in desperation, the American then put a $1,000 US 'bounty' for information leading to the arrest, prosecution and conviction of their tormentors/QRM'ers.. Not to be outdone, the Canadian subsequently raised the bounty to $2,000 CDN and for effect added "Dead or Alive", 'Texas/Dubya '-style..
In March 2003 the Canadian also drafted and whenever seriously QRM'ed read to his American colleague for comment, evolving versions of "The Life of Riley"--which ultimately called for Riley's removal from the FCC..
Surprise, surprise, within ~a week of the third weekly 'reading', Riley at long last decided to act--in a manner of speaking. He wrote a letter accusing ND8V of: causing deliberate interference, broadcasting and threatening [the life of the American, no less!]. All of this arising from just one relatively mild attack in the series--lasting only about an

hour--on 26 March 2003 as patently incompletely reported by some third party [the identity of which is still unknown].
Nevertheless, Riley again categorically threatened ND8V's licence with: either a suspension and revocation hearing, or a loss of voice privileges for the remainder of the licensing term [i.e. for the next ~nine years].
But, despite the unequivocal nature of the underlying evidence [eventually Riley received three tapes of the same event from three independent sources!] and the relatively strong if curiously obtuse language used, Riley did not call it a Warning Letter..
Moreover, being the petty bureaucrat that he is, Riley did not like having his feet put to the fire, especially in so public a fashion. Thus, even while appearing to take some action against ND8V, he also decided to get even--with [surprise, surprise] the American, being the only one over whom he had some power. Riley disingenuously accused him of conduct ".as bad as or worse than." ND8V. Now, that is a standard indeed!!! Shame on you, Riley!
Incidentally, this was the only substantive communication the American had ever had from Riley in his life--the ~dozen reports and costly double-registered tapes he had submitted on ND8V notwithstanding!
But, no one should be/is fooled. As previously admitted and long suspected in any event, Riley has obviously been sitting near his energized antennas for much too long! To knowledgeable amateurs, Riley's recent self-serving and semi-articulate musings in general and about ND8V and the American and the 'Polish Calling Frequency' in particular, in the circumstances do not even pass 'the giggle test'..
This latest wet noodle lashing and the requirement to reply "within 20 days" notwithstanding, as of the time of writing of this piece, or some six months--but in reality two years--later, Riley is yet to do anything substantive to ND8V who continues to terrorize 14.275 MHz and vicinity with manifest impunity..
How come 'Kalamazoo Cuckoo' ND8V is still licensed and leads such a "Life of Riley", many thinking amateurs ask???
There are some cynics who answer generally that the ties that bind--and blind--to this extent are to be found only within 'secret societies'--such as the Masons, the Ku Klux Klan and groups which meet for trysts in 'bath houses'.. But, being cynics, they probably over-generalize, if not over-state.
Others, who are less jaded, muse simply that Riley is ineffective because he is fundamentally incompetent. Some suggest that Riley's secretary is weak in basic fact investigation and reasoning ability and has too ready an access to his rubber-stamp signature.Those who are legally trained, laconically submit that Riley is simply 'wet' on the law. Still others suggest that Riley is legally, administratively and otherwise unethical. A few point out the obvious--that Riley is also from the 4th Call District--and as such is simply covering the 'butts' of his fellow southern rednecks [and/or Klan wannabes]. Some have even suggested that Riley is intellectually and otherwise dishonest. While K1MAN bluntly states--on-air and in writing--that Riley is a "cheap and corrupt politician".
Some of these characterizations might be true, in whole or at least in part. But, after only two years of close monitoring and observation, the

"relationship" between Riley and ND8V appears to be both much simpler and at the same time much more complex than that....
In a nutshell, 'Kalamazoo Cuckoo' ND8V arguably leads "The Life of Riley" because Riley continues to treat this 'useful ~400 lb. idiot' and his uncouth toadies on 14.275 MHz and vicinity as the radio equivalent of thugs and 'brown-shirts' in his battle to get K1MAN and his Bulletins off the air.
Riley was/is playing the dangerous game of 'the enemy of my enemy is my friend' and provides this crude racist bully 'deep cover', convenient 'escape clauses', lenient sentences and 'get out of jail free' cards virtually on request..
But, why has this gone on for so long? Arguably, because now 'Kalamazoo Cuckoo' ND8V also knows 'where Riley's bodies are buried'..
Whatever the short and/or long-term tactical merits of Riley's ad hoc, unprincipled and ultimately Machiavellian approach, because of the collateral damage it causes to non-combatants and innocent others, it constitutes highly irresponsible and unethical administrative behaviour and brings great discredit not only to amateur radio and the FCC, but also to the United States of America as a whole.
It is past time, therefore, not only for Mikee 'Kalamazoo Cuckoo' ND8V but also for Riley 'Rot' Hollingsworth K4ZDH to go....

K1MAN studios are on Baxter Point. We have the peninsula from the tip and back 1000 feet to the narrows. It is the peninsula marked at the top of the the photo.
BIOGRAPHY OF GLENN A. BAXTER, P.E., K1MAN

EXECUTIVE DIRECTOR OF THE AMERICAN AMATEUR RADIO ASSOCIATION (AARA)

NETWORK MANAGER OF THE INTERNATIONAL AMATEUR RADIO NETWORK (IARN)

PRESIDENT OF THE IARN AMATEUR RADIO PEACE CORPS FOUNDATION, INC.

Glenn Baxter, K1MAN, is probably one of the best known radio amateurs in the world today. He is Manager of IARN, the International Amateur Radio Network, founded in 1985. He is also Executive Director of AARA, the American Amateur Radio Association®, founded in 1992. Mr. Baxter was formally recognized by the State of Maine Legislature on March 13, 1991 for IARN's humanitarian work in world wide emergency communications and was named as a Vermont Academy Distinguished Alumnus on October 1, 1993 for his amateur radio contributions to society.

Glenn studied engineering at Northwestern for two years where he also played football for the Wildcats, and he received his B.S. in Industrial Engineering with honors from the University of Rhode Island in 1968. While at URI, he placed Fourth in the Boston University Annual Debating Contest and won First Prize at the American Institute of Industrial Engineers (A.I.I.E.) Northeast Regional Student Conference for written and oral presentation of a technical paper. This paper in Third nationally. He took Third Place at the same conference the previous year.

Glenn worked as an Industrial Engineer at Allied Chemical in Syracuse, New York; Worthington Controls in Norwood, Mass.; and Collins Radio in Cedar Rapids, Iowa. He was also a Management Consultant with Booz, Allen, and Hamilton in Chicago. He is a Registered Professional Engineer in both Maine and Illinois.

Glenn formed a Professional Engineering firm in 1977 and later organized Investors Financial Services, employing 20 NASD Registered Representatives in Maine and New Hampshire. He has also taught physics, chemistry, and math in high school.

Glenn got his FCC Novice class license in 1956 and his Extra and First Class Commercial tickets in 1964. His first stations were a Heath AT-1 and Hallicrafters S40-B; Heath DX-100, SB-10, Collins 75A-4 and later adding a Collins KWS-1 which he ran until 1980 when he upgraded to Collins S-Line gear and a KWM-380. His biggest linear is a home brew PL-172, and he also runs a Collins KW-1 on AM. Glenn can heard frequently on 20 meters from his

mobile running a Yaesu 757 into a Hustler antenna.

IARN started with a spectacular bang in 1985 during the Mexico City Earthquake, and the IARN Amateur Information Bulletin Service began its 365 days per year transmissions on 80 and 20 meters in 1987. See www.K1MAN.com for the latest transmitting schedule. The talk show call innumber is 1-800-262-9543.

The IARN Amateur Radio (call in) Talk Show format began in 1995. The show is 90 minutes per program on 14.272 and 3.977 MHz. single sideband at 5:30 A.M., 1 P.M., and 8 P.M. and also 3.890 MHz. amplitude modulation at 6:23 P.M. and 9:30 P.M. All times are Eastern local times.

Glenn's long term goals are to raise the standards in amateur radio, encourage a significant increase in mutual cooperation among rival factions, and expose and eliminate the petty jealousies and cliques that may end up self destructing our vital and very valuable service.

Jim, I noticed that Hans had three options to choose from in his
original post - the third being:

>> Or were you just trolling? <<

For the sake of accuracy, this one would be the latter , Jim..... :)

Seems to fit best, as well. And as usual.

Absolutely.

Brain has "chastised" me over "not being able to resist" responding to posts, yet his posts on this forum outnumber mine. By a considerable percentage.

Also, he's tried to alledge that I (and others who are "on the other side, which is just about everyone) "don't have a life" beyond RRAP...Yet there's been several occassions wherein family, work, volunteer activites, etc have "kept me away" from the NG, and when I did return, there was a post from the Gonadless One making some smart alec comment about not responding to him in what HE considers a timely manner.

He has taken the lessons of his master to heart: "Do As I Say, Not Do As I Do".

On the contrary.

That device is a rather expensive piece of consumer electronics. If I plop down more than $100 for a television, I darn well expect it to do what I want, and I DON'T expect it to do stuff I don't want it to do...Like QRM'ing SARSAT.

>Of course the story makes good news copy on a slow day, but it's hardly
>a remarkable incident, and certainly not a reason to make snide innuendo
>about "Designed And Built By PROFESSIONALS".

Sure it was.

It was an expensive piece of consumer electronics that launched an even more expensive (and potentially distracting) search and rescue mission. The USAF and it's proxy, Civil Air Patrol do NOT dismiss as "unimportant" ELT signals or RF radiated on ANY frequency that have the potential of being a distress signal.

>Neither is it a reasonable
>basis for a jeremiad about the FCC shirking their responsibilities.

Why not?

What other agency is responsible for establishing the technical standards for consumer

>Sheeeeesh!

Sunnuvagun!

> My name is Hans and I improved this message.

This was improved?

I dare say we know better than you do, Brain.

And if you ARE operating QSK, you don't have to ask "all after"...You can
stop them and get a "fill" right then and there.

(People who USE "QSK" know this...)

>> Here's the plain facts:
>>
>> The speed and accuracy of *any* mode that requires a human operator is

>
>Ever heard of changing bands, or relaying?

OK.

You're taking traffic from someone on 40 meter RTTY. The band sucks.

You just missed practically everything he sent. He finally QRT's.

How are you going to tell him to QSY if RTTY isn't working? Use an even
WIDER bandwidth mode on a band that's already crappy?

>> Or:
>>

If it happened once, it can happen again. We don't really know what made it fail that way.

>Of course the story makes good news copy on a slow day, but it's hardly
>a remarkable incident,

False signal on a distress frequency? Possible fine of $10,000 if the owner turns it on again? Somewhat remarkable to me.

>and certainly not a reason to make snide innuendo
>about "Designed And Built By PROFESSIONALS".

I was simply pointing out that *any* piece of electronics can have problems. I guess that's not allowed here.

Just like one must not wear shirts with the slogan "Protect Our Civil Liberties" where President Bush can see them.

>Neither is it a reasonable
>basis for a jeremiad about the FCC shirking their responsibilities.

I think it is, considering the background of how loose certification has become.

On the subject of "MADE IN CHINA": There was a story in the local paper's business section about the bottleneck at various West Coast ports, specifically Long Beach and Los Angeles. Imports from Pacific Rim countries, particularly China, are arriving at such a rate that ships wait as much as a week to be unloaded because the port facilities can't handle the flow. New people are being hired and the facilities expanded, but such expansion takes time.

Of course what's less visible is the flow of money in the opposite direction.

>Was not the Titanic designed and built by professionals?

Yes - but there was nothing wrong with its design and construction. In fact, it carried more lifeboats, and employed more modern safety equipment, than was required by regulations at the time.

The Titanic's problem was improper operation. Steaming full speed into an ice field on a cold, calm, moonless night after receiving no less than six warnings of ice ahead was simply reckless. Doing so when the lookouts had no binoculars was even more reckless.

Trying to turn away, and in doing so exposing the side of the ship to the danger, was the final mistake. That action can be understood, however, because the decision to do it was made in haste. (Later analysis showed that had the First Officer simply reversed engines and hit the 'berg head-on, the ship would have stayed afloat and few if any lives would have been lost).

My point was simply that even high priced state of the art electronics can go
awry at times, and in ways that affect more than the owner of the device.

IOW, nobody's perfect.

Ah - that fits. In that era, mobile and portable operation by hams was not
allowed. A station license was for one location only! The rules changed in the
very late '20s and '30s to allow portable and finally mobile operation. (Until
1949, mobile operation was not allowed below 25 MHz, and for a time in the
1930s, portable operation required a special "Z" or "ZZ" license with four
letters after the number. W6AM got callsign "W6ZZAM" for portable use.)

The need or desire to develop a distinctive style because of a shared
call sign should not have had much play in the amateur service where
each operator is assigned a unique call sign.

If you wish to speak of other services morse code use, then there are
other venues for that.

> Even with the advent of electronic keyers, some of this old preference

Yes, it is! But given what I've seen from inside the Beltway, and from FCC, in
the past 25 years or so, anything's possible.
>
One more item:

If you look at the comments on the various recent petitions, it turns out that
support for retaining Element 1 is very strong. This is particularly true if
you count by individuals commenting rather than the raw number of comments.

IOW, the majority isn't silent.

Getting the license is just the first step. Then comes setting up a station,
including an antenna system. (Did I mention that my HF antennas are homebrew
too?)

>> The Type 7 photo - just one little low-res photo taken by an old Kodak
>> DC-40 -
>> has kept him tied up for some time. (He hasn't even found the other photos
>> of Southgate Radio projects that are out there on the web).

There's a couple of pictures of a receiver from 30+ years ago, and one of the
power supply for the Type 7 transmitter section. In operation.

And other stuff.

>> btw, some months ago I got a Canon A80 digital camera. New - for CASH...
>
>You're just asking for a windy lecture on photography, aren't you?

Not really. I'm no great shakes as a shutterbug - W3RV has it all over me in
that department. I've seen his stuff. My words can't do it justice.

I've done various forms of photography since high school, including B&W
development and enlarging. The DC-40 was just to get the toes wet in digital;

the A80 is more serious. $250 on closeut sale at BJ's (and I paid CASH ;-))

>> >> But we see nothing at all from Len. Heck, he can't even solve a simple

BRAIN! Violating your own position on the discussion of other radio
service's practice and policies? Why just last week you were invokling this
"broadband" attitude about "radio" in order to accomodate your bunk-buddy
mentor, Lennie the Licenseless.

Have you since changed your position on the discussion of "radio" issues?

>> Even with the advent of electronic keyers, some of this old preference

Brain, just last week you chastised several of us for trying to inhibit Lennie's rhetoric based upon your broad interpretation that this (RRAP) is a "radio" forum, not just an Amateur forum.

Now you are trying to re-write your own policy here.

Some of that "NCTA Double Standard", no doubt.

Yet another Brainism.

On rec.radio.scanner.flame_fest it is implied that Rich Whiten is an obese piece
of white-trash, a world class liar, and a radio
has-been who never really was.

Thats fine as far as the writer goes.
But do you remember when Rich Whiten
called Phil N9GOR
a nigger on ham radio?

Did you know Rich Whiten admits
he called Phil a nigger on the air
and that Rich seems to think
thats perfectly ok?

Now consider this.

Rich Whiten was Glenn Baxters co-host!

Rich Whiten and Glenn Baxter
are best friends!!

So Glenn Baxter, K1MAN, the self described
Radio Savior and alternative to ARRL
is best friends with a notorious racist
who was his radio Co-Host!

What would Walter Cronkite do if he knew
his VOICE ID had been used
by Baxter and Whiten?

Imagine: It would seem as if
CRONKITE endorsed RACISM!

Naturally we all KNOW Cronkites
lawyer asked Baxter to stop using the
ID immediately. But we also know
Baxter is a scofflaw!

Imagine the hypocrisy. Imagine the
degradation. Do you think John Palmer
realized Baxter was best friends with a
racist, or that Baxter invited a racist to
be his co-host on the K1MAN broadcast??

The FCC has NUMEROUS complaints about
Rich Whitens EXTREME RACIAL SLURS.

The only thing I can deduce is that
K1MAN condones RACISM!!

Baxter recently deliberately interfered
with the Jamboree on the Air
The Boyscouts once-a-year
opportunity to try out Ham Radio.

What did Baxter do?
He jammed them off the air!

Is Glenn Anti-american?
Is Glenn a racist?
IS Glenn a closet KKK member?
Does Glenn still send radio equipment
to foreign terrorists and kidnappers?

I think the radio public deserves to know!

No officer in their right mind is going to plow straight ahead into an
iceberg to "save the ship". The rudder was grossly undersized so the
Titanic did not respond to the helm soon enough and swiped the ice.
Other ships of that era with properly designed rudders would have
turned away from the berg and missed it with room to spare.

Not really. Look at an ARC-5 receiver, and how much could be packed
into a small space using mid-1930s technology. Hams could, and did,
build very compact equipment without "miniature" parts.

The govt. was very cautious in those days about such things. Spies and
all that.

Would you be willing to work for what your Chinese counterpart is paid? And
work under his conditions?

Would you be willing to repeal most environmental, safety, and child-labor
laws? How about intellectual-property protection?

I wouldn't.

Sure they would - if they knew that the ship could not turn in time, and would sink as a result.

>The rudder was grossly undersized so the
>Titanic did not respond to the helm soon enough and swiped the ice.

Titanic's sister ship, Olympic, was essentiaaly the same ship. A few feet shorter and less luxurious, but the same basic design. Olympic went into service first, and much of her crew was transferred to Titanic because of their

experience.

No complaints of a grossly undersized rudder.

>Other ships of that era with properly designed rudders would have
>turned away from the berg and missed it with room to spare.

Perhaps if the rudder had been larger, the Titanic might have turned away quicker and missed the berg. But that's really irrelevant. The ship was clearly going too fast for conditions.

And what is even LESS thought of is their investment in us and propping
of our economy that they are doing.

One of these days man,
And it won't be very long
They gonna own us.

Scares the bejabbers out of me.

So are repeater jammers and deadbeat dads.

There's also the possibility that the cold water around
there made the steel the ship was constructed with somewhat
brittle. That the metalurgy of steel wasn't that well
controlled or understood back then. And that the batch
of steel used for the hull wasn't as good as it should have
been. And that modern ship builders would never use it
today. That the same ship built with good steel could have
taken that iceberg hit with much less if any damage.

I still wouldn't sail a ship thru iceberg infested waters.

Stations in distress may only be able to produce QRP level
signals. Thus you want to have *NO* QRM on those frequencies.

If I were the owner I'd unplug it and be screaming at the
manufacturer to come get it and fix or replace it.

But then that "cover story" only provides the government with a "head's up" as to where the radio equipment is, Robert...Still doesn't make sense.

Brief transmissions from low power, mobile (portable) facilities makes more sense.

More than a possibility, it's been documented from samples brought up from the wreck. Lot of sulfur in that steel.

Perhaps what makes the Titanic disaster so intriguing is that there were so many seemingly-small factors that contributed. The lack of even one of these small factors could have averted the sinking, or at least the loss of life.

For example:

If the lookouts had binoculars, they probably would have seen the berg sooner, and the attempt to steer around it would have been successful. (The binoculars were locked in the second officers' cabin, but neither he nor the other officers knew it at the time. Still there).

If any of the six ice warnings had been heeded, and speed reduced just a bit, the attempt to steer around the berg would have been successful.

If the first officer had not tried to steer around the berg, the ship would have stayed afloat.

If there had been lifeboat space for all, all could have been saved. (The design of the Olympic class could accomodate enough lifeboats - special davits were used that allowed more lifeboats, by stacking them on the boat deck. But lifeboats cost money, took up deck space, and everyone thought they'd never be used. So the full number were not provided. After the disaster, sister ships Olympic and Britannic were equipped with adequate lifeboats by simply reverting to the original plan).

If there had been 24 hour radio watch required, the nearby Californian could have saved most if not all who perished.

If Titanic had used a standard distress flare signal, (I don't think such a signal existed in April 1912) the nearby Californian could have saved most if not all who perished.

If better steel, a bigger rudder, higher bulkheads, double hull (not just a double bottom), or higher capacity pumps had been used, the disaster could have been avoided or the ship kept afloat long enough for all to be saved.

If the officer on the Californian who knew Morse Code and who used to listen in when "Sparks" was off duty had remembered to wind up the magnetic detector, he would have heard the distress calls and Californian could have saved most if not all who perished. But he forgot and heard nothing.

>I still wouldn't sail a ship thru iceberg infested waters.
>
Not at full speed with inadequate lookout capability and a big, slow turning ship!

Which proves the point: Titanic was not being operated properly for the conditions encountered. Other ships had stopped completely, or were proceeding at greatly reduced speed, because of the ice.

During WW1, too. In fact, during WW1, all amateur radio equipment had to be
disabled - receiving as well as transmitting.

In 1940, more than a year before Pearl Harbor, all US hams were required to
either take a loyalty oath or turn in their licenses.

That's why they call the events leading up to a mishap "the chain of
events"...Becasue if even one link in the chain had been broken, the chances of
the incident occuring would have been reduced.

In some ways they already do.

Try to buy a new computer that's American made. Or many other items.
The brand name may be USA but the "Made In XXX" label tells the facts.

It's "good for business/the economy" in the short run because the
prices are lower. But in the long run, we're not going to have the
American Dream by manufacturing only weapons, high tech stuff, and
taking in each other's washing.

> Scares the bejabbers out of me.

That's a pair of compounded far-fetched what-if's which defy common
sense. I'm not into endless streams of what-if's, they can go anywhere
as has been the case for 92 years so far in the case of the loss of

the Titanic and "prove" nothing. We're into an engineering screwup
here, not what-if's.

You stated "there was nothing wrong with its (Titanic's)design and
construction." My position is that the Titanic apparently did have a
major design flaw which led directly to it's loss, it's rudder was
undersized.

http://www.bbc.co.uk/history/society_culture/society/titanic_02.shtml

There's no "might have beens" about it. Unless you can explain why a
larger rudder wouldn't have turned the Titanic quicker so that it
missed the berg.

So what's your solution? Shut off Pacific Rim imports and "Buy
American"? Then cheerfully pay maybe $2,000 for a 21" Motorola TV
rcvr? Or do you actually think that by shutting down imports from
China we can "reform" them?

Face it, Dick wasn't defending himself when he WAS in here.

Just like a lot of SK amateur morsemen of "legend" are no longer
with us.

Is the FCC "required" to keep the morse test JUST BECAUSE some
old morsemen are no longer among the living?

You PCTAs need (desperately?) to build Time Machines to go back
to the halcyon past and glory that was beeping. ["Come with us
now to the days of yesteryear..." - intro to the old "Lone Ranger"
show on radio]

Me, I'm busy trying to invent anti-gravity...but something's holding
me down...

>fist of pioneers like W4KFC, you would not have asked the question.
><grin>.

<GUFFAW!>

Morse code radiotelegraphy STILL sounds like robot-to-robot
communications.

Absolutely NO human-sense clues as to the other operator other
than the monotonic "personality" of dot-dash "weighting." Can't
even tell the gender of the other operator...no voice tone, only the
need to Believe in the "honesty" of the operator that what they send
is "truth."

Sort of like "UR 599 OM!" Pbththththt.

>Reason #2: Under "less than ideal" conditions, a little overweighting
>with emphasis on the DAH seems to make copy a bit easier.

Your rationalization seems a bit overweight on the DUH.

Fantasy Island, amateur style.

Make certain amateur radio is safe from SEX...force all to learn morse and qualify by test to exclude any trace of gender. Make certain amateur radio is safe from humor...use "HI HI" for laughter by qualified morse testing. Remove all honesty from signal strength-tone "reports."

[morse allows anyone to use another callsign without an immediate recognition of the fraudulent ID...such as using a spouse's ham call]

Keep the "tradition" firm, fast, held in place by armor-protected concrete & rebar footing, make all hams "qualify" to operate below 30 MHz by morse test. Just like the OLD, OLD days.

All mighty macho morsemen can do perfect copy. All the time.

They are "qualified" to do so. They have their ancient "degrees"
to prove it (suitable for framing, complete with engraved borders.

>> Here's the plain facts:
>>
>> The speed and accuracy of *any* mode that requires a human operator is

>
>Unless you have an Extra Class operator who vows to do his best to
>make machine copy impossible. Ever heard of such stupidity?

Tsk. We shouldn't make fun of W0s who may be SK.

[I think we did that while he was alive - metaphorically speaking -
in here...]

>> The basic fact is that Morse code is *not* the slowest mode available
>> to hams.
>
>It is among the very slowest, all else being equal.

Tsk. From Jimmie Who's vast experience in ALL communications
modes, he might argue that facsimile is "slower" but that isn't really
message/communications transmission but imagery. However, if
"a picture is worth 10,000 words" according to that old saw, then
FAX most definitely has more words per minute than any super

morseman's capability (10,000 "words" taking 10 minutes to FAX
would be 1000 WPM equivalent rate).

The experimental LF amateur trials, not allowed in the USA ham
bands, have been making records for others using "ESSM"
(extremely slow speed morse) which needs a computer and
program to decode. Hardly comparable. :-)

I dunno what he would explain about SSTV but I'm sure that he
could get all pixel-lated about sending imagery via morse. :-)
And "justify" it because interference hit every OTHER mode.
Hi hi!

>> > Assuming the interruption it to tell the transmitting station that
>it's
>> > ALL garbled, your 60-100WPM teletype just became zero.
>>
>> Yup.
>

>>
>> 73 de Jim, N2EY
>
>The only blockage are the eyes rolled back Morse Code elitists.

To quote a supervisor on a Texas road gang, "Whut we got here is
a failure to communicate!" [from a Paul Newman film "Hud"]

Jimmie must think the Tacoma Narrows bridge is still up and
swaying in Kitsap County, Washington. Aka, "Galloping
Gertie" that collapsed six decades ago. Spectacular failure
shown on "disaster" documentaries on TV. Of course it was
designed by PROFESSIONALS! :-)

Tsk. Oddly enough, the replacement Tacoma Narrows bridge
has been up and running traffic daily for five decades. Of course
that one was also designed and built by PROFESSIONALS! :-)

Jimmie Who is busy trying to build a "bridge over troubled waters."
Little does he know that the water dried up a long time ago, leaving
only a trickle ot morse water to be lapped up by elitist AMATEUR
morsemen.

Tsk. Everyone needs wading boots to walk on that "water."

"They" are all in here...you KNOW who "they" are... :-)

>I'm just noting that it is a treaty matter,
>and that the powers that be don't like treaties.

Okay, so who are these "powers that be?" The ARRL? They (the Newington bunch) don't get along with the IARU on morse code testing. Tsk. Haven't for years.

What exactly is this "treaty" you guys keep talking about?

The USA is a signatory to the United Nations and part of that is the International Telecommunicaitons Union, a UN body. As a signatory to the ITU, the administration of the USA is obliged to follow the decisions made at the World Radio Conferences. ALL of them, not just the amateur radio matters. [that ALL is a whole heaping bunch of other radio service matters]

The FCC regularly engages in international agreements on tariffs and details with the rest of the world through the International Bureau of the FCC. Correct me if wrong, but I don't see each and every matter handled by the International Bureau as needing any "Congressional approval," either House or Senate.

Like it or no, U.S. amateur radio is a minor matter among all the various radio services regulated by the FCC. It just isn't of such importance that the Congress of the United States "must approve" each and every decision of the FCC in regards to ham radio.

Note: As to "administration" term in the ITU, that doesn't include the U.S. Congress (the legislative part of the tripartite government organization according to our Constitution). The USA's "administration" for the ITU is the Department of State, the National Telecommunications and Information Agency, the Federal Communications Commission.

>My guess is that if the
>requirement is removed from a treaty and the folks in Washington know
>that, they will oppose it on the basis that they don't want to be told
>what to do by the rest of the world.

As a result of WRC-03, new (in force now) ITU radio regulations state that all administrations have the option to include or exclude the morse code test for any amateur radio license.

So far, the FCC has not changed the requirement for Test Element One in Part 97, Title 47 C.F.R, for all U.S. amateur radio licenses having below-30-MHz operating privileges.

> Despite my PCTA status, When Element one goes away, I'll note it, and
>enjoy my morning coffee just like any other day.

I'll enjoy mine, too. :-)

[Braun coffee maker, Columbian coffee, water imported from California]

> Many middle aged (and up) males astound me with their ability to get
>incredibly angry about "things" "When Morse code goes away.

Yes, they DO! :-)

Olde-fahrt syndrome. Everyone gotta do it as THEY did it because
they WERE so mighty and schmardt...a long time ago. :-)

Tsk.

>It'll just
>be like CB" or the one I always get to hear "Any idiot can become an
>Extra these days" - when they forget that I am one of those any idiots.

I've never classified you as any "idiot," Mike.

Maybe misguided in your preference for having all test for morse-
manship in order to operate below 30 MHz. :-)

Tsk. I was operating below 30 MHz as well as above 30 MHz a
very long time ago, perfectly legally, and without any single
license!

Sunnuvagun!

Search for KGB Colonel Rudolph Abel on the 'web. You will learn
that he posed as an artist in NYC and had an HF receiver-
transmitter in his apartment for his "hobby of amateur radio."
According to arresting investigators. After WW2.

Abel was traded for Francis Gary Powers, the U-2 pilot downed
over Russia, tried and imprisoned there. Powers later worked for
Lockheed in Burbank then the NBC Western Hq there, living in
Roscoe Canyon in Sun Valley (northern extension of Roscoe Blvd,
see Mapquest), not exactly a neighbor but nearby to me.

Talked to a young fella on the repeater the other day who introduced himself by saying "my first personal is Jim and you're my first contact, QSL?".

He seemed like a nice sort, delighted that he had just received his shiny new call sign, and was anxious to make some new friends. Kinda sounded like I felt when I put my new call sign on the air the first time way back when, except probably brighter, cuz Jim is one of those young computer jocks. Me, I still got problems with the LL scale on my Pickett slide rule. Yep, I think Jim sounded brighter than me, quick to catch on to things.

But I don't think Jim will be back on the repeater. Before I had a chance to really get to know much about Jim, or even wrangle an invite to lunch, another station, with an impressive "senior" call sign joined the contact, flashed his shiny Radio Cop badge, and proceeded to issue Jim a "verbal speeding ticket" for improper lingo on the radio. "Radio Cop" said the term "personal" (and for that matter "handle") were unwelcome in ham radio, and that Q-signals were not to be used on VHF voice. Just generally made my newfound friend feel like an unwashed interloper. (Gosh, I've been saying "handle" since I was a conditional class. Slow to catch on, you know.)

Now I should point out that "Radio Cop" took pains to appear very well meaning. Didn't use any bad words that I noticed, was quite polite, even seemed like he was trying to be "helpful." In other words, he thought he was doing Jim a favor by pointing out his transgression from our sacred Amateur Radio way of doing things. I think Jim felt just the same way I did back in a new school in third grade when the well meaning teacher pointed out that "we don't keep our pencil behind our ear in this room." Sure enough, I looked around and none of my new classmates had pencils behind their ears. Sure was embarrassing, and at that moment I really wished I was back with my good old buddies in second grade. Now, if I'd been allowed to hang out a couple of days, I'm sure I would have learned how to properly stow my pencil. And if Jim would have hung around a couple of days on our repeater I just bet he would have noticed that his

lingo, perhaps learned in another radio service, was a bit out of place, and pretty soon Jim would sound "just like the rest of us." Like I said, he seemed pretty bright to me, quick to catch on to things.

"Radio Cop", you have kept our hobby uncorrupted. I heard Jim down around 27 Mhz this morning, and saw his ad on eBay trying to sell his barely used 2-meter HT. I'm gonna miss my new friend Jim, because I think I could have learned something from him. Maybe you could have also.

Like I said, he seemed pretty bright to me, quick to catch on to things. But he left us. Wonder what he "caught on" to?

Nice story, Hans.

Read one almost like it in CQ a few years ago.

Coincidence?

I don't think so.

Isn't it off season for trolling?

I am sure you wouldn't. Kinda rough, all that trolling and story telling,
only to keep getting your nose rubbed in it.

It's gotta hurt.

Maybe if you were a bit more honest and forthcoming it wouldn't be so
painful...

Naturally you'll decline to cite the issue in which you read the story
and provide proof of your slimy ill-disguised accusation of plagarism.

Coincidence?

I don't think so.

So I'll call your bluff, Steve. Cite the CQ issue which contained this
story, not written by me, and I'll send a public apology "Letter to the
Editor" to my buddy W2VU, Editor of CQ. Your move. Put up or shut up.

With warmest personal regards,

de Hans, K0HB

Good question, Hans.

When I find it, I'll hand deliver it so I can film you eating it.

No need to send it to your "buddy", Rich. I'm not his "buddy" but I doubt
he'd be interested in pusblishing an "apology" that was a spin-off of a USENET
flame fest.

His character is a bit more robust than yours.

>With warmest personal regards

What is it with you, Lennie and Brain making public statements you don't mean...?!?!

Dear Rich,

Some time ago a story appeared in CQ that told a story about a young, recently licensed operator who made the mistake of using "CB" lingo on the repeater.

The story went on to tell about a "crusty" old op that subsequently read him the riot act on the air, causing the young op to rethink his Amateur "career".

Can you help me locate this article?

Thanks!

Hi Rich,

Just so you know what's going on......

Back in 1997 on one of the USENET newsgroups, rec.radio.amateur.policy,
I wrote the story quoted below. Today I repeated it there in response
to a related post from Jim, AA2QA, trying to promote more harmony among
the various license classes.

Another fellow there, K4YZ, has suggested I plagiarized the story from
CQ magazine, and I've called his bluff. You'll get a message from him
asking to locate the story in CQ.

73, de Hans, K0HB

Where did Jim go?

Talked to a young fella on the repeater the other day who introduced himself by saying "my first personal is Jim and you're my first contact, QSL?".

He seemed like a nice sort, delighted that he had just received his shiny new call sign, and was anxious to make some new friends. Kinda sounded like I felt when I put my new call sign on the air the first time way back when, except probably brighter, cuz Jim is one of those young computer jocks. Me, I still got problems with the LL scale on my Pickett slide rule. Yep, I think Jim sounded brighter than me, quick to catch on to things.

But I don't think Jim will be back on the repeater. Before I had a chance to really get to know much about Jim, or even wrangle an invite to lunch, another station, with an impressive "senior" call sign joined the contact, flashed his shiny Radio Cop badge, and proceeded to issue Jim a "verbal speeding ticket" for improper lingo on the radio. "Radio Cop" said the term "personal" (and for that matter "handle") were unwelcome in ham radio, and that Q-signals were not to be used on VHF voice. Just generally made my newfound friend feel like an unwashed interloper. (Gosh, I've been saying "handle" since I was a conditional class. Slow to catch on, you know.)

Now I should point out that "Radio Cop" took pains to appear very well meaning. Didn't use any bad words that I noticed, was quite polite, even seemed like he was trying to be "helpful." In other words, he thought he was doing Jim a favor by pointing out his transgression from our sacred Amateur Radio way of doing things. I think Jim felt just the same way I did back in a new school in third grade when the well meaning teacher pointed out that "we don't keep our pencil behind our ear in this room." Sure enough, I looked around and none of my new classmates had pencils behind their ears. Sure was embarrassing, and at that moment I really wished I was back with my good old buddies in second grade. Now, if I'd been allowed to hang out a couple of days, I'm sure I would have learned how to properly stow my pencil. And if Jim would have hung around a couple of days on our repeater I just bet he would have noticed that his lingo, perhaps learned in another radio service, was a bit out of place, and pretty soon Jim would sound "just like the rest of us." Like I said, he seemed pretty bright to me, quick to catch on to things.

"Radio Cop", you have kept our hobby uncorrupted. I heard Jim down around 27 MHz this morning, and saw his ad on eBay trying to sell his barely used 2-meter HT. I'm gonna miss my new friend Jim, because I think I could have learned something from him. Maybe you could have also.

Like I said, he seemed pretty bright to me, quick to catch on to things. But he left us. Wonder what he "caught on" to?

Well, what IS his problem?

That group is heavily focused on DX and contesting - particularly DX
contesting.
They're "a bit competitive"....

Anything less than an Extra is a big competitive disadvantage in DX contesting.
Like not being able to work split. So why doesn't the guy get one? Even if he
only works 'phone, all he need do is pass element 4. And he's had almost 4
years.

No, wait, that's not a good reason. Those writtens are really tough. More than
4 years ago, (Jan 19, 2000, to be exact) a certain verbose nonham here said he
was going for Extra "right out of the box". But no ham license of any class
yet.
And this nonham says he's a "radio PROFESSIONAL"....

Maybe he should apply to The Group. I'd like to attend that meeting....

contesting.
They're "a bit competitive"....

Anything less than an Extra is a big competitive disadvantage in DX contesting.
Like not being able to work split. So why doesn't the guy get one? Even if he
only works 'phone, all he need do is pass element 4. And he's had almost 4
years.

No, wait, that's not a good reason. Those writtens are really tough. More than
4 years ago, (Jan 19, 2000, to be exact) a certain verbose nonham here said he
was going for Extra "right out of the box". But no ham license of any class
yet.
And this nonham says he's a "radio PROFESSIONAL"....

Maybe he should apply to The Group. I'd like to attend that meeting....

>as has been the case for 92 years so far in the case of the loss of
>the Titanic and "prove" nothing. We're into an engineering screwup
>here, not what-if's.

Not at all.

The fundamental problem was that they were going too fast for the conditions. That's an operational mistake, not an engineering mistake.

Recently there was a lawsuit in Lancaster County where a motorcyclist sued an Amish buggy driver. Seems the buggy's horse balked at crossing a bridge, and just stopped. Car came up behind the buggy driver and stopped too.

But the two stopped vehicles were around a blind curve. Motorcyclist comes around the blind curve, swerves to avoid the stopped car, bike falls over and both he and the bike are pretty banged up.

Now he says it was the buggy driver's fault, because he should not have hitched up a horse that might balk at crossing a bridge. He says the fact that he came around a blind curve at a speed where he couldn't safely control his motorcycle has no bearing on the accident.

The court ruled otherwise.

>You stated "there was nothing wrong with its (Titanic's)design and
>construction." My position is that the Titanic apparently did have a

>> going too fast for conditions.
>
>There's no "might have beens" about it. Unless you can explain why a
>larger rudder wouldn't have turned the Titanic quicker so that it
>missed the berg.

Simple. In a ship like Titanic, putting the rudder over isn't like steering the
front wheels of a car. In landlubber terms, the rudder is at the stern, and
depending on a lot of variables, putting the rudder left (to make a left turn)
can make the stern of the ship go right.

In reality, once Mr. Murdock got the bow of Titanic pointed in the right
direction, he ordered the rudder reversed to avoid having the stern hit the
berg.

After the disaster, sister ship Olympic was heavily modified - bulkheads
extended, double hull installed, and of course more lifeboats added. The third
ship of the class, Britannic (originally to have been named Gigantic) was still
under construction in 1912, and its design was similarly modified.

No mention of any rudder modifications.

Britannic never entered service as a passenger ship - she was converted into a
hospital ship during WW1. The British govt. had some sort of deal where they
helped finance the Olympic class, with the understanding that they would carry
the mail [R.M.S. means Royal Mail Ship], and that in wartime they could be
converted to military use if needed.

Britannic's main use was to transport wounded back from Gallipoli. On her
seventh trip, she struck a mine near Greece and sank even faster than Titanic
had, despite all the improvements. Open portholes are generally blamed.
Fortunately she was headed *towards* Gallipoli and wasn't carrying wounded, so
most of those onboard survived. She lies on her side in about 400 feet of
water, and was found in the 1970s by Jacques Cousteau.

Olympic ("Old Reliable" to her crew) was in service for 25 years, being scrapped in 1937. During WW1 she served as a troop transport, and on one trip not only evaded being torpedoed but chased, rammed and sank the attacking U-boat.

And now a trivia question, if anyone is still reading this far:

In both "A Night To Remember" and "Titanic", when the berg is sighted, the command "hard a starboard" is given. Yet the ship turns to the left (port). And this is not a cinematic mistake. What's the explanation?

Do you suggest we break out our little book of quotations from the Chairman?

It isn't funny business. That country is hell bent on becoming the new worlds economic power - replacing us, and too many people are just happy to accept it. After all, they can just go home and watch that 99 dollar TV. Eventually, it will catch up with us.

We live in a country where people seriously suggest boycotting Heinz Ketchup, and Proctor and Gamble for their satanic logo. Wonderful to see such conviction.

But we are willingly allowing a communist nation (and remember, they are STILL a communist nation) to use all the tricks in the book to undercut the rest of the world economically.

BTW, not too many people noticed just a couple months ago, when the US lost out on the title of the preferred country for investments. Guess who is number one now?

882. Re: BPL Has Arrived: One HFer's Take On it

Newsgroup: rec.radio.amateur.policy
Date: 2004-10-21 02:02:49 UTC
From: Wby <rnrampage@yahoo.com>
Message-ID: <dNEdd.11341$Rf1.7967@newssvr19.news.prodigy.com>
Source record: 98730

Bush is under pressure to bring broadband to the masses, especially with some parts in Asia getting 4mb. But is 256k really broadband? I don't think so, not when I get 1.3mb on DSL and my father-in-law gets 2.5mb with roadrunner.
Powell is going to do what the Administration wants, no matter how many times the ARRL points out the obvious flaws in their plans. But historically, how many "You-can-do-this-over-your-AC-lines" products have really worked? How many are still around?
BPL will fail, but it will be a long painful process for amateurs to endure...unless of course there is a change in the administration, no more Powell, etc. and maybe, just maybe, they'll actually put some ham-smart people in charge.

I asked him about the story without "who what when where why".

I asked him a benign question about a "CQ" story.

You made it a personal vendetta. Covering your butt.

You had to give your "friend" a "head's up". Turned it into a flamefest
outside of the firepit. Why do you think it was necessary to give Rich a
"head's up"..?!?!
Does every inquiry about "CQ" magazine require a clarification from you?

Guess this just kinda confirmed my suspicions about what kind of a creep
you really are, Hans.

Still nothing from one of "us"

It STILL does not answer your suggestion about "several Extras" in RRAP suggesting that anything less than an Extra Class is "a problem".

The story relates the telling of some club some time ago wherein some other group of people may have acted stupidly.

You have yet to quote Brian (W3RV), Hans, Jim, the other Jim, or myself, among others, as having said anything close to "what's his problem" over not being an Extra class licensee.

Where's the quotes, Brain?

I just KNOW there was a reason you posted the SAME post under two different threads, but I'll be darned if I know what it is.

And I'm trying to figure out how some club meeting int the 1960's has anything to do with what's going on today.

Some generic club, with generic members, making generic comments that may or may not be germane.

Whew.

Aw, gee, Steve, you make a nice whining tear-jerking lament out of it,

"benignly" accused me of plagiarism. Now you cry out in dismayed
anguish about "cheap shots" when your accusation spirals down in flames.
Andersoneque misdirection, puffery, and posturing at its finest!

Sunuvagun!!!

Nope.

I asked Rich a question. No names, reasons, or other non-germane "head's up" as to why the article was of interest to me.

You, instead, go into "CYA" mode and front loaded it with your "Let me give you a head's up" letter. What was the purpose of that, Hans, if not to give your "friend" the opportunity to cover YOUR butt...?!?!

Had Rich come back and said "Sorry, you got it wrong", I would have come back and said I got it wrong and apologized. I've done it before, I would have done it again.

You on the otherhand...well...you accuse me of "Andersonesque misdirection, puffery and posturing"..

What was your letter to Rich if not misdirection of it's own?

You prove your own misdirection and puffery, Hans. It scared the bee-jeebers out of you that YOUR bluff was called and you had to do what you could to tilt the playing field in your favor.

I know it means little to you coming from me, but trust me when I say that others here have seen what has transpired and will see that Hans Brakob is not a person to be trusted to be fair.

Sunnuvagun!

And that is enough in and of itself for me.

G'nite, Lennie!...I mean Hans!

My offer stands, Steve. Cite the CQ issue which contained this story,
not written by me, and I'll send a public apology "Letter to the Editor"
to CQ. If my story came from CQ Magazine as you suggest, then nothing
which happens here on rrap or in emails to W2VU will magically erase it.
Show us the article.

Your move.

Put up or shut up.

Hello, Hans

This group could learn something, but I doubt most are able.

To the group:

I was on Guam when Hans provided communications that the U.S. Navy couldn't.
Yep, ol' stupid Hans loaded up a fence and contacted KG6AAY on Guam and
communications were passed directly to ComNavMar.

So go ahead and say what you may; I know better and so does Hans.

Grow up and try and do something constructive.

There's a lot of "constructive" things that can be done in this world, Jim. We all do what we can and in our own ways.

No one doubts that Hans has done many of the things he has said. Indeed, there is much documented to prove his assertions.

However that's not MY current issue with him.

It seems Hans has a problem with anyone threatening his "authority" or daring to take his bluffs. I wrote a very benign letter to Rich, W2VU at CQ magazine to try and locate the article that I remembered reading.

Hans felt it necessary to give Rich a "heads up" letter that could do nothing but induce prejudice on Rich's part in finding the item to which I refered.

P L E A S E show me the "constructiveness" or "fairness" of Hans' actions.

Inquiring minds, etc etc etc....

Here's why it looks familiar:

http://groups.google.com/groups?selm=871572021.21669%40dejanews.com&output=gplain

http://groups.google.com/groups?selm=944ade%24t3q%241%40nnrp1.deja.com&output=gplain

http://groups.google.com/groups?selm=7r0mpu%24q9n%241%40nnrp1.deja.com&output=gplain

I don't read CQ with any regularity so I don't know if it's in there or not.

>So what's your solution?

Long term thinking.

>Shut off Pacific Rim imports and "Buy
>American"?

No.

>Then cheerfully pay maybe $2,000 for a 21" Motorola TV
>rcvr?

In the very early 1980s I paid about $300 for a 19" TV set. It lasted almost 20 years with one minor repair. $300 then is what - $600 today?

With all the improvements in the intervening years, I'd expect a US made 21" to cost less than $500, not $2000. And yes, I'd pay more for American-made.

>Or do you actually think that by shutting down imports from
>China we can "reform" them?

Where did I say we should cut off imports from them?

Now, you answer my questions:

Would you be willing to work for what your Chinese counterpart is paid? And work under his conditions?

Would you be willing to repeal most environmental, safety, and child-labor laws? How about intellectual-property protection?

On that last item, note that one of the prime problems foreign firms are having in China is dealing with underpriced knockoffs. Like a major software company finding copies of their products for sale in China at less than 10% of the price of real ones - and the authorities won't do anything about it. Not because they're corrupt, but because they don't consider that sort of thing to be wrong. To them, it's more important to get the software into use in China, so that it can contribute to the build-up of the economy. Their concept of production cost appears to be the cost to burn the CDs and make the packaging. A perfect example of "From each according to his ability, to each according to his need".

Not just reduced but in most cases totally eliminated. That's what's so intriguing about the Titanic disaster.

For example, with or without a bigger rudder, even a slight speed reduction would have given the crew more time to react, and the ship more time to turn and avoid. As it was, Titanic almost missed the berg, so a little more time, resulting in quicker turning would have been a critical factor.

The business about surviving taking the berg head-on was confirmed by computer simulation. Done by expert professionals, too.

One idea was disproved by computer simulation. Some folks speculated that if the watertight doors had been raised, the ship would have gone down level instead of bow-first, and stayed afloat longer because the bow, gangways and portholes would have stayed above water longer. Computer simulation showed that with the watertight doors open, the ship would have sunk even faster, and that power would have been lost much sooner, darkening the lights and silencing the radio. Plus cutting off the pumps.

--

It should be remembered that none of the engineers aboard Titanic survived, because they all stayed on duty keeping steam up and the power on until the very end.

Not a troll.

A FACT!

Riley is going to be K1MAN's BITCH!!!!

K1MAN is doing MORE to promote Amateur Radio than ANYONE else!

Indeed. I had the opportunity to witness a new ham make a mistake on
a wide area St. Louis repeater. Radio Cop Curt/Advanced blasted him
without even trying to appear nice about it. Another ham intervened
and told Curt that his name was the first half of the word "Curteous."
Didn't phase him - he just kept going.

1. You are blind.

2. The club meeting was in 2003.

3. Kelly related the story for a reason.

4. Jim agreed with the "what IS his problem" remark.

5. Do your homework next time before shooting off your mouth.

6. Get back to me if you have something useful to add.

If you mean the suggestion about slamming Lennie over HIS asertion that
he'd get an "Extra lite out of the box", those were HIS words, you idiot.

And in ANY case, you STILL don't make a case for your "several Extras on
RRAP" assertion.

So.............You're STILL shy of some facts here, Brain.

Try again.

I see it, Brain.

It STILL does not prove anything. Most of the comments were about your
scumbag buddy and HIS not taking a test that HE said he was going to take...but
hasn't.

1. I am not blind. I can SEE THROUGH your rants just fine.

2. You still refer to some club wherein some persons made some comments
that are completely relevent to that CLUB in particular, NOT Amateur Radio in
general. I am assuming it was the Franklin Radio Club or other such east coast
club.

3. Yes, he did.

4. Jim ACKNOWLEDGED Brian's remark which again pertained to the club in particular, not Amateur Radio in general.

5. No homework was needed. I had 115 countries confirmed as a General/Advanced, so I KNOW that getting the Extra, while helpful in some regards, was not NECESSARY to DXing. I recommend that before running YOUR mouth off YOU do your OWN homework.

For once.

What...No snappy response? You responded to other posts
vis-a-vis this situation within minutes...don't tell me you didn't
"see" this one too!

>>I<< have the answer...just being a big shot, as ususal. Always
first, better, bigger or longer....

Just like Lennie.

Received the following from Rich, W2VU:

QUOTE:

Dear Steve,

I did a search of our online database, which extends back to 1990, and
found nothing. I also checked and found nothing in CQ VHF. On the
other hand, this is unfortunately such a common experience that it

wouldn't surprise me if some variation on the theme has been published somewhere before.

I see that you've copied K0HB on your request for information. Hans and I have been e-mail correspondents over many years now, sometimes agreeing on things and sometimes disagreeing. But I seem to recall that some years back, HE wrote something along these lines - posted it somewhere on the internet as I recall. Internet postings tend to take on lives of their own, often traveling far beyond their original intended audiences. Perhaps parts of his story were quoted by a columnist for some ham magazine? Or maybe it was reprinted (with or without his permission) in a club newsletter? You might ask Hans if his story - if I'm remembering things correctly - was ever published anywhere.

vy 73,
Rich W2VU
Editor, CQ

UNQUOTE

In as far as remembering that the article was from "CQ", I am apparently wrong. My own personal "library" of "CQ" only goes back to January 2001.

In as far as stating it was CQ, I was wrong and apologize to Hans for that.

I have, however, sent a letter to the ARRL to inquire of them if the story was thiers. If that too comes up empty (and assuming Hans doesn't feel compelled to send THEM a "heads up", too...) I will complete the apology. There WAS an story. If I remeber it from here, then I was wrong as to it's origin and author.

Steve, K4YZ

What "actions"?

You're the one who opened the incident with an accusation of plagiarization, yet when I defend myself against that slimy charge you wring your hands in self-righteous dismay.

"Why Am I Not Surprised?"

My offer stands, Steve. Cite the CQ issue which contained this story, not written by me, and I'll send a public apology "Letter to the Editor" to CQ.

Your move.

Put up or shut up. It's really >>THAT<< simple.

Defending yourself...to Rich?

When absolutely NO MENTION of you, RRAP, or the intended use of the request was, Hans?

What was the purpose of your "head's up" letter to Rich, W2VU about...?!?!

It was YOUR slimy attempt to divert Rich's attention from assisting me, Hans.

It was YOUR "self righteous" hand wringing that we are talking about.

>My offer stands, Steve. Cite the CQ issue which contained this story,
>not written by me, and I'll send a public apology "Letter to the Editor"
>to CQ.

Not necessary, Hans.

I have already posted the letter that Rich sent to both of us and apologized to you for having gotten the attribute vis-a-vis the medium that I thought it was in.

>Put up or shut up. It's really >>THAT<< simple.

I've already been "on the move", Hans.

Those "actions", including my apology for having gotten it wrong about CQ vis-a-vis another source.

Try being a man about it, Hans.

It really is THAT simple.

>36, de Hans, K0HB

Un-sincere as always. Thanks for proving me right...again...

"Constructiveness" and "fairness"???? When attacked with unfounded and untrue suggestions of wrongdoing (in this case, plagiarism) you will never find me "fair" or "constructive". It was my intention to bare your lie to public view, which I seem to have done.

I note in a message which the Editor of CQ sent to you and copied me, he says:

"Dear Steve,

I did a search of our online database, which
extends back to 1990, and found nothing.
I also checked and found nothing in CQ VHF."

But keep looking, Steve, because my offer still stands. Cite the CQ issue which contained this story, not written by me, and I'll send a public apology "Letter to the Editor" of CQ.

Your move.

Put up or shut up.

No, it was first and foremost an engineering screwup, if the rudder
had been properly sized the ship would have turned harder/quicker at
any speed and would have missed the iceberg. Particularly since the
collision was only a sideswipe.

> Titanic was "state of the art" for its time.

So were the World Trade Center towers which were designed to survive
if an airliner plowed into them. But the engineers who designed the
towers didn't factor in the fact that airliners are not just
structural impact loads, the carry fuel too. Oops.

Save it for the landlubbers.

<<massive snip>>

By the way, ya want the list of ships I've been on during sinuous
coursing anti-submarine drills at 30+ kts? Ever stand on the deck of a
ship which is bigger the Titanic doing multiple banked s-turns turns
at combat power speeds? There's some "rudder ops" which will get ya
yer sea legs real quick . . .

Now answer my question and thankew.

That's right.
>

> other group of people may have acted stupidly.

That depends on the definition of "stupid".
>
> You have yet to quote Brian (W3RV), Hans, Jim, the other Jim, or myself,
> among others, as having said anything close to "what's his problem" over not
> being an Extra class licensee.

Let's clear this up.

The club referred to above is a special-interest amateur radio
organization, not a general-purpose club. Their focus is HF contesting
and DXing, setting up stations to do those things better, and not
much else. They don't do domestic contests or QSO parties; they focus
on the big stuff. Their members are highly competitive, and
progressive. (Example: They were among the very first to have
computers in their hamshacks).

In pursuit of the club goals, an Extra class license is pretty much a
necessity, because the DX is often in those subbands. That's just the
way it is.

So the fact that somebody without an Extra would even apply for
membership and expect to be taken as a serious DXer/contester by that
bunch indicates a problem someplace.

The "what's his problem" reaction above happened a relatively short
time ago, not the 1960s, so the code test wasn't the issue at all.

Is that an "elitist" situation? Maybe - but that club is an elite
group. Their accomplishments in their chosen field tell the tale.

Yeh, right. Like the guys below wondering about the following ham's license class?

"What IS his problem?"

It's not that simple.

At present we have protection against non-licensed users including
BPL. When it becomes uncomfortable for the BPLers, they will
petition the FCC and with enough "juice" applied, the situation may
very well change 180 degrees as to who has to protect whom.

The protection that the Rules grant can be reversed at the stroke of
a pen.

Source record: 98670

I won't go into detail, but, the supporters of K1MAN might be
bemoaning some upcoming enforcement issues regarding the ongoing fued
between Glenn Baxter and Riley.
I've got it on good authority that K1MAN will be receiving
some future enforcement action. The reason I'm not posting the emails
I've gotten from,my source, is that I'm respecting a statement that
the emails are internal and not for the public.
All I can say is "stay Tuned". I know that some people will
not appreciate this posting, and I respect that as everyone, including
the trolls on here, has a right to their support or opposition to
K1MAN. I will ignore flames, though, so,k those that wish to do their
imatition of a fire breathing dragon should save their breath and
their time as I have zero interest in replying to a potential flame
war.
Besides...Baxter's license expires in a little less than a
year and given his many letters from Riley over the years, it's a sure
bet that there's a major regulatory hurdle that Baxter will have to
clear up before he gets a renewal ticket.
Personally, I would try to stay off the FCC's radar in terms
of enforcement, even if some people disrespect Riley for whatever
reason ("paper tiger", being a punk, etc, etc). It's not worth it
money wise to tick this guy off! Remember: ticking off a government
official is usially akin to messing with a hornet's nest. You tend to
lose the battle.

Steve, K4YZ

925. K1MAN JAMS BOY SCOUTS

Newsgroup: rec.radio.amateur.policy
Date: 2004-10-21 19:02:26 UTC
From: Tarapia Tapioco <comesefosse@ntani.firenze.linux.it>
Message-ID: <4f89c9304ab2a79a5291e7391f1680a4@firenze.linux.it>
Source record: 98674

Mark Abramowicz, NT3V is the
trustee of KC3BSA, the club station
K1MAN deliberately interfered with
last Saturday (Oct. 16, 2004)
during the Scouts national
Jamboree On The Air event.

Mark is also a reporter for
AR Newsline. Hopefully
Bill Pasternak will choose
to run a story about
K1MAN jamming boy scouts on 3.890.

It will be interesting to hear K1MAN
explain the story of his own
jamming on his bulletin.

Heres what happened:

A large group of Hams were
talking on 3.890 MHz. As they
chatted, two Boy Scout stations
happened by the frequency.

VE3WIB and KC3BSA, with a total of
nearly 80 Boy Scouts joined the
conversation on 3.890. The scouts
were having a great time, and
the hams involved were excited to
work these enthusiastic youngsters.

At 9:34 PM, long before even one
quarter of the scouts had
a chance to speak, K1MAN
began the deliberate
interference which ended their ham
radio contacts.

In fact, WA1HOD, Chris Murdock, called
K1MAN no less than 3 times to inform
him that K1MAN was interfering with
an ongoing QSO of "12-14 hams
and some VEs" (Canadians).

"The righteous indignation is
simply overflowing." Chris said.

What was Baxters reply?

Laughter and
mockery of the situation.

Baxter: "Oh my goodness please
dont tell Riley... please dont
tell Riley."

And "(Laughing) Oh my goodness,
oh woe is me, (laughing) please
dont throw me in that briar patch, please dont throw me in that briar patch."

Controversy is no stranger to
K1MAN. He has been accused
of supplying radio equipment and aid to terrorists on the
island of Bougainville.

More recently Baxters show
invited a co-host to his bulletin, namely alleged racist,
Richard Whiten, ex-WB2OTK,
who was accused of deliberate
interference and extreme racial
slurs before turning in his
own license for cancellation,
after first claiming the
license had been turned in
by computer hackers.

It is also well known in the
Ham community that the voice ID
used by K1MAN, done by
Walter Cronkite,is used
against the journalists
express wishes, as outlined in
a letter to K1MAN by his lawyer,
Ronald S. Konecky.

Hopefully, Baxters latest warning
letter from the FCC signals the end
of K1MANs days on Amateur Radio.

One could sumise that if all the other ships in the area were
taking it slow, Titanic should have taken heed and go slow
as well. One doesn't have to have knowledge of a field to
realize that. I'm sure that the ship's owners would have preferred
and understood a late but intact Titanic at the destination.
Maybe the ship was "unsinkable" but I wouldn't want to test
that with paying passangers aboard. Boeing doesn't test fly
new aircraft with commercial paying passengers.

933. BBC Says Morse Code Still Alive and Well In UK

Newsgroup: rec.radio.amateur.policy
Date: 2004-10-21 20:38:15 UTC
From: k4yz@aol.com
Message-ID: <20041021163815.15823.00002683@mb-m28.aol.com>
Source record: 98682

QUOTE

Morse code 'alive and well'

By Brady Haran
BBC iCan reporter

Read this entire story again - but in Morse code

Morse code seems to be the communication method that just won't die.

The maritime industry stopped using the code years ago and radio hams are no longer required to pass a Morse test to obtain a UK licence.

But a dedicated band of amateurs - and a large number of people with disabilities - are helping keep the dot-dash system alive.

Leicester-based radio ham David Ramsey told BBC News Online: "One country after another dropped the code, but on the amateur side it seems to be picking up again.

"People who mainly use their voice (on radio) like the idea of picking it up... they know there is a lot of Morse going on and they wonder what it is all about.

"It is curiosity that is bringing them back."

It is difficult to find a clear spot on many of the popular bands

In a bizarre merger of technologies, there are even people sending Morse messages via the Internet.

Radio hams with disabilities are another group utilising Morse code.

Tapping out dots and dashes can sometimes be easier for people with physical or speech impediments.

John Hammond, from the Radio Amateurs Invalid and Blind Association, said some radio users used Morse keys which are modified to suit their disabilities.

"I remember a chap who couldn't speak and was totally paralysed, but he was able to use his Morse key with his tongue, which was marvellous.

"Another chap, known as Twinkle Toes, could use his big toe... I think that was the only part of his body that he could use."

George Longden, secretary of the Morse Code Preservation Society in the UK, said his dream would be for radio hams to be required to pass a Morse test.

He said: "My prime wish will never be granted - the resumption of a CW (Morse) examination for all amateurs aspiring to a licence to operate on all HF bands between 1.8 and 30MHz."

Despite this, the society is attempting to teach Morse to new radio users.

"We support an initiative which offers authenticated speed tests.

"It will provide for tests of varying speeds at rallies and conventions throughout the country and we are also endeavouring to encourage other countries to undertake similar services."

Mr Longden said the airwaves remain clogged with Morse users.

"(Morse code) is still very much alive and it is difficult to find a clear spot on many of the popular bands during an international contest.

"If you don't believe me then listen on most weekends."

> a pen.

Correct.

Do you have any idea how the rules might be rewritten so that they exempt BPL, but don't apply to every other unlicensed service? THe act of unlicensed services given carte blanche to interfere with the licensed ones would indicate that they can interfere with other unlicensed services!

Just wait until some intermod interferes with a baby monitor at the wrong time! Guess Mr and Mrs Smith will be consoled that their neighbor can download his porn via protected BPL.

This is the opening of a brave new world of wonders! Just imagine once those pesky "regulations" (a swearword in republicanese) go away.

Those cheap Chinese TV's will be a couple bucks cheaper once they can get rid of that stupid RFI shielding.

The same for computer monitors. Those sissies that are worried about monitors pooping all over international distress frequencies can go take a hike. The need for another broadband option and the needs of the many far outweigh the needs of a crashed pilot. Hell he or she knew the risks when taking off for that flight.

So many electronic items can be made cheaper by removing those stupid interference regulations, it is a wondrous thing. The free market rulez.

Somewhere along the way, people will discover that *nothing* works anymore tho'. ;^)

Indeed.

> The "what's his problem" reaction above happened a relatively short
> time ago, not the 1960s, so the code test wasn't the issue at all.

That was Steve's assumption -and- mistake.

> Is that an "elitist" situation? Maybe - but that club is an elite
> group. Their accomplishments in their chosen field tell the tale.
>
> 73 de Jim, N2EY

Jim, -you- chimed in with "Well, what IS his problem?" indicating that
you agree with the scorn given a mere Advanced class operator who
wished to contest with like-minded people.

Best of luck.

The ARRL, huh? Great use of some staffers time. Good thing I didn't short them on my dues money.

Leave no stone unturned.

Check out 73, World Radio, and Nuts&Volts, too.

Maybe Len can look back in that defunct magazine, Ham Radio. Or ask Yoshi if it was published in JARL.

After all, you couldn't be wrong.

Manic efforts to prove Hans wrong. Hi, hi!

Hans, I see no apology either.

Meanwhile, Steve is manically exhausting all other avenues before he has to phase the music. But in the end, I'm sure you'll get your apology because he's told us before that he admits when he's wrong, even though I've never seen an apology from him. He's in too deep on this one to snub you on your justly deserved apology.

Best of Luck.

Hi, hi!

Hmmm? Doesn't look like an apology even though he admitted to getting it wrong. Just what does it take for Steve to act like a human being?

BPL isn't an unlicensed service. It's an incidental radiator - under present
rules..

One simple change that could happen would be to define BPL as a new class of
service - perhaps with a "license" of some sort.

>THe act
>of unlicensed services given carte blanche to interfere with the
>licensed ones would indicate that they can interfere with other
>unlicensed services!

(Insert standard "not a lawyer" disclaimer here)

Who defines what constitutes "harmful interference"?
>
>Just wait until some intermod interferes with a baby monitor at the
>wrong time! Guess Mr and Mrs Smith will be consoled that their neighbor
>can download his porn via protected BPL.

Not a question of intermod. And since the baby monitors have to accept
interference today, they'd not be protected anyway.

Besides, it would be a simple matter to notch out a narrow band around 49 MHz
for old cordless phones, baby monitors, etc.

>This is the opening of a brave new world of wonders! Just imagine once
>those pesky "regulations" (a swearword in republicanese) go away.

Just the next step in "getting the government off your back"...

>when taking off for that flight.

There are people who will argue that point.

>So many electronic items can be made cheaper by removing those stupid
>interference regulations, it is a wondrous thing. The free market rulez.

Sort of.

Consider that for many people today, "radio" below UHF almost doesn't exist.
They have broadband internet (wired), cable TV (wired), cell phones (UHF)
satellite radio (UHF), maybe a wireless lan (UHF) etc. Heck, conventional NTSC
TV is supposed to be replaced by digital HDTV a few years ago, etc.

>Somewhere along the way, people will discover that *nothing* works
>anymore tho'. ;^)
>
Nothing *old* works anymore. The solution will be simple: Go buy a new one.
(Made guess where).

Look at the history of consumer electronics since the '70s, Mike. LPs were
replaced by CDs. Beta was replaced by VHS which is being replaced by DVD in a
bunch of formats. (Remember the big old laserdiscs?) How many generations of
computers and various hardware formats have come and gone? Etc.

Our Ford had a phrase for it: "ending is better than mending"

This isn't anything new. More than 40 years ago, the major car companies knew
that, on average,a large part of the new-car-buying public was buying a new car
every 2 model years. Their goal was to get it down to every year. Back then the

average car lasted about 7-8 years, and it was a rare one to go 100,000 miles, but the manufacturers paradigm was that it was better that way.

> 'newsgroup cops', I'm still a radio amateur and still online"

It is a good point you make, Jim. First time I ever used an autopatch, a local Ham came on afterward, and let me know about some mistakes I was making. I thanked him, and we went on our merry ways. Even now, last weekend, when I was operating in a contest, another Ham came on and asked if I could move "upwind a bit". I asked him if he had a pref of how far, he told me, and I moved. We both went on our merry ways.

Later in the same contest on 20 meters, a Ham (presumably, since he didn't ID) broke in on a QSO to chastize me for using speech compression - which I do if I need to. I asked him if he wanted to make a QSO with me, and he said "Hell NO, you stupid asshole!" I thanked him and noted that it was good to see there were still gentlemen on the air, and we both went our merry ways.

Point is that its a big world with all types, and if you are going to allow one early experience to convince you to call it quits, then you

must have had some interest issues going on.

Lessee, a person studies the writtens, takes the time to learn Morse code to 13wpm, takes the time and trouble and expense to take the tests. Then in his first QSO is chastized for using "my first personal is" instead of "My name is", so they quit?

I can only assume Hans is telling the truth, as he seems a pretty straight shooter to me. I draw a different conclusion tho'. Mr Newbie Ham was waaaayyy too sensitive, either from embarrassment or ego.

We cannot control how others talk. The simple attempt to control teh behavior often reinforces the behavior.

BPL is susceptible to intermod effects is it not? I'm assuming that if
it is at different frequencies, that the frequencies can add and
subtract just like other RF.

> Besides, it would be a simple matter to notch out a narrow band around 49 MHz
> for old cordless phones, baby monitors, etc.

Except for that intermod problem, which would get to you via the
"incidental radiator"

That shouldn't matter. Buy a new unshielded device to replace the old
unshielded device. Same problems and more. There really is only so much
spectrum to use

> Look at the history of consumer electronics since the '70s, Mike. LPs were

I have to live with the problems caused by that. When you have to
archive digital data, the disappearing machine paradigm causes us to
have to re-archive, and re-archive and re-archive. Coupled with the fact
that CD's are now considered to be extremely non-archival, it's a
nightmare, or at least almost a full time job for someone!

And now (most) Automobiles cost so much that people have to take out
longer and longer term loans. I know people that have 7 year car loans!
This new paradigm is near it's endgame also. I note that the local car
dealerships are filled to bursting with those 35-40 thousand dollar cars.

Simple. BPL will be defined as a specific non-licensed service
protected against harmful interference from the Amateur Radio
Service.

Kaboom. End of discussion. Even if it's taken to court, in
technical matters (as differentiated from non-tech policy or
quasi-political matters) the Federal appellate courts always
seem to give deference to the agency involved.

>Those cheap Chinese TV's will be a couple bucks cheaper once they can

The only ray of sunshine is that the EU standards for RFI protection
are stronger than those of the US and the cheapie manufacturers do
not want to tool up two different production lines for the sort-of-same
item.

>yer sea legs real quick . . .

Big deal. Were you driving the things? Did they do the tests with a hull, rudder and propulsion system identical to Titanic's? Didn't think so.

Titanic and sisters were primarily designed to be liners, not military ships. Sister Olympic not only evaded a torpedo attack in WW1, but chased down, rammed and sank the attacking submarine. Kinda says something about rudder size and manueverability...
>
>Now answer my question and thankew.

Simple:

Suppose you're driving a car in conditions where your range of vision is 200 feet. And suppose it takes that car 10 feet to stop for every 10 mph of speed.

How fast do you drive the car under those conditions? If you go 50 mph and hit something, is that an engineering screwup? Or is it a simple case of going too fast for conditions?

I say it's simply going too fast. Better brakes, better headlights, etc., might permit higher safe speeds, but if they're not in use, it's fundamentally the driver's responsibility to operate at a speed safe for the conditions encountered.

Of course!

>Maybe the ship was "unsinkable" but I wouldn't want to test
>that with paying passangers aboard. Boeing doesn't test fly
>new aircraft with commercial paying passengers.
>
Almost everyone then knew Titanic could sink (the term used was "virtually
unsinkable"). What they could not conceive of was that she could sink so fast -
less than 3 hours from hitting the berg to hitting the bottom of the ocean.
That's why the rules did not specify "lifeboats for all" - they could not
imagine a modern ship in the North Atlantic sinking so fast that no other ship
would come to her rescue in time.

Of course WW1 would show just how fast even modern ships could be made to sink.

The comparison with new aircraft isn't as valid, though. Titanic wasn't a new
type of ship - Olympic was the first of the class, and had been in service for
months before Titanic's voyage. Both ships had undergone sea trials and the
crew supposedly knew how to operate the ship safely.

>
>Which would answer why the possession of an Extra MIGHT make the
>difference.

What the back benchers were saying was: "How come this guy doesn't realize that any serious DXer/contester who wants to join our club would get an Extra first?"

How could anyone disagree with that?

>>In pursuit of the club goals, an Extra class license is pretty much a
>>necessity, because the DX is often in those subbands. That's just the
>>way it is.
>
> Then that IS the difference.

Exactly. Having that license *does* make a difference in how well someone can do what the club is focused on. "What's his problem", in that context, meant "doesn't this guy understand how basic that is?"

Take contesting, for example. There are folks who think they are doing well if they make 15 QSOs/hr in a major contest, and can keep that rate up for 12 hours. And for their setups and skills, they *are* doing well! Yet among other folks, 30 QSOs/hr for 24 hours (twice the rate, twice as long, four times the score or more) isn't considered "doing well" at all. All depends on your concept of what "doing well in the contest" is.

>>So the fact that somebody without an Extra would even apply for
>>membership and expect to be taken as a serious DXer/contester by that
>>bunch indicates a problem someplace.
>>
>>The "what's his problem" reaction above happened a relatively short
>>time ago, not the 1960s, so the code test wasn't the issue at all.
>>
>>Is that an "elitist" situation? Maybe - but that club is an elite
>>group. Their accomplishments in their chosen field tell the tale.
>
btw, Steve, no disrespect intended, but among those folks, 115 countries isn't a big deal. Twice that many isn't! It's just a matter of what they focus on.

To paraphrase what was written earlier: Nobody, regardless of license class, has all the answers or knows all of it.

That doesn't mean everyone's knowledge is the same, or that everyone's opinion is equally valid/of equal value.

While old paper books remain readable for centuries.

Our Ford would say that the benefits of new technologies outweigh the problems.
Would also point to the new industry of retrieving data from old archives.

>> Our Ford had a phrase for it: "ending is better than mending"

Part of that is the perception that people "need" a certain type of car. Today,
it's SUVs - I can't tell you how many people I know drive SUVs as
commuting/general purpose vehicles. They *never* go off a paved surface, and
are in 4WD a couple of times a year at most, when we get a bad snowstorm.

I think part of what has happened is that as electronics have gotten more
reliable, the industry has changed to insure that people will keep buying new
stuff. My first CD player lasted almost 20 years, and failed due to mechanical
abuse (not by me). Its replacement plays DVDs too. Another example: The latest
version of Windows 95 is only about 7 years old, but it is no longer supported
by Microsoft. More and more new software won't run on it, so eventually Win95
will simply disappear from most of the few places where it is still used. Which
means new computers because the old ones won't run XP, etc.

I don't know Jim. I know I guy who is on the DXCC Honor Roll and is only a General. I'm an Extra and I don't even have my basic DXCC. I could see the same might apply to contesting too.

>isn't
>a big deal. Twice that many isn't! It's just a matter of what they focus on.

No offense taken.

I know that a lot of the "big ones" are in the bottom 25kHz, but at the same time, a lot of them transmit in the bottom 25 and listen up. That's where I caught a lot of them.

Although I know you can use "past" callsigns collectively to get your DXCC, I reworked almost all of them again under K4YZ to get my DXCC. A few were left overs from when I held my 2X1, but most were done over...just to do it.

>apology because he's told us before that he admits when he's wrong,
>even though I've never seen an apology from him.

You only see what you want to see, Brain.

Obviously Hans saw the apology after reading a little bit. Strange,
though, since he "responded" to posts made AFTER those comments, yet stated he
didn't see those. Oh well...He DID see them and DID respond accordingly.

>He's in too deep on
>this one to snub you on your justly deserved apology.

You need to ask around, Brain. I have made errors before and was not the least bit hesitant to come up off of an apology when it was right to do so.

On the otherhand, we're STILL waiting on apologies from you on your falsely claimed Somalia operation and your failed claim of "Unlicensed devices play a major role in emergency comms" assertions, even though both of those have been hanging out there for MONTHS.

How long does it take YOU to make an apology for mistated, untruthful or errant posts, Brain?

>
>5. Steve still does not acknowledge that he was wrong. Never apologizes
>either.

1. Sure it was. You started it with that silly "several Extras on RRAP"
claim.

2. Talking about a specific club with specific requirements.

3. Talking about a specific club with specific requirement.

4. Does he need to? It certainly doe NOT affirm YOUR assertion, Brain.

5. Wrong. Your message is date-time-grouped Thursday at 6:26PM CST.
Hans had acknowledged and ACCEPTED my aplogy HOURS before you made this
post...More than enough time for you to get your facts right.

Now...Since YOUR statement is obviously VERY wrong on TWO counts as
demonstrated by Hans' acknowledgement and acceptance of the apology hours
before you made this post, let's see how long it takes YOU to acknowledge YOUR
error and apologize to me........

Maybe he's ND8V's neighbor!

Talk about a RADIO CRIMINAL!

If someone needs "chopped off at the knees", it's ND8V, and his idiot
friends!

Time after time, I hear ND8V using foul language, making references to
sexual encounters with other hams XYL's, and so on. How many times has
anyone heard K1MAN using such language? ND8V is the PROBLEM, not K1MAN.

How bout it Rube, you in there Rube?

Give me a fu**ing break.

> You've snipped the part where I prove my points, of course.

Hey kids! Trying to blame the loss of the Titanic on the rudder, while certainly an interesting point, is only one point. The rudder was what the rudder was. It functioned as well as it could, which was no well enough. That is a different matter.

If I roll down the street in a loaded 18 wheeler at 100 plus miles per hour, and try to stop within 300 feet - it will not happen. The brakes are simply not up to the task. Does this mean that the brakes are poorly designed or defective? Not even. I was operating my 18 wheeler way outside it's design parameters.

Did the pilot and Captain not know the handling characteristics of the ship? They should have.

Frankly that BBC story smacked of the "Everything you think you know is wrong" sort of tale. The guy that was the hero is actually the coward, and the guy they called the coward was actually the hero, blah, blah, blah....

If the Titanic had not been simply scaled up from smaller designs, it probably would have been a better ship. If the metal was better, it would have probably not suffered the extent of damage, If the ships compartments not been *open at the top*, it wouldn't have had a cascading effect of water going over the top of one compartment, then starting to flood the next compartment, tilting the ship more, and exacerbating the problem until the water filled all the compartments and it sunk. Watertight doors at the bottom meant nothing when the water just went over the top.

Odd that in all the arguments, that one is overlooked. I would postulate that the number one reason that the Titanic sunk at all is that the compartments had the open top design. Were they sealed, the Ship would probably just taken on a major list, and ridden low in the water. But almost all the people would have survived.

>

HAR! I didn't read the whole letter before replying, and see that you
used a similar example!

The rudder was sufficient to maneuver the ship at a certain rate at a
certain speed. Was the Titanic not very maneuverable? Possibly. Is an 18
wheeler as maneuverable as a 'Vette? Not hardly. But if the 18 wheeler
tries to head down a winding mountain road at the same speeds the "Vette
can, and it crashes, it isn't the designer's fault.

Bullshit. I've heard ole Mikey cursing on HF for YEARS! What takes so
long??? He's had many complaints filed, but little get done.

>

reputation.

He represents those who DO NOT worship the ARRL. ARRL, "trusted", "eanrned",
yeah right, only by fools.

>
> K1MAN, on the otherhand, is a callous, self-appreciating thug.

Again, your opinion, not a fact.

Here's a FACT.
If ya don't like the bulletin service, spin the f**king dial! It's not like
the bands are jammed packed these days!

Maybe no one turned them in? I have no idea how or IF the FCC goes about "monitoring" the bands. I thought that was what the "elite" Official Observer (OO) club was for. You know, the bunch that the ARRL makes you test for and then says you're a qualified "turner inner"? Problem is, most of the stuff turned in, goes unnoticed or let's say not dealt with for a LONG time. WHY? Because you have to report it (IF AN OO) to the Head OO in your area, then IF he/she thinks it is good enough - providing they're doing their job, they send it on to the ARRL who then scrutinizes it and sends it (if they even bother to look at it or listen to it) on to the FCC. By that time the damage is done. People who may have wanted into ham - shuck the idea off, those who were, don't want bothered with it anymore. It ruins it for many. Used to be, I'd promote Ham. Once the crap started filtering in and you were afraid to turn the dial for fear of letting some kid you were trying to promote ham to, hearing the same BS as is very common on the CB band, then I quit doing so. I used to have parents ask me about how "nice" ham was and they'd like their child to get into it, as it was "clean". They didn't want CB. Well, now it isn't so anymore. That few percent is enough to start ruining it for many. You leave enough bad apples in a barrel long enough, eventually they all start to rot.

Enforcement issues are varied. Some may agree, some may not. For starters, IF daily fines (usually of $500 per day/offense) are listed in many of the FCC books, then why wait months? Rack them up with the number of days it takes and the cumulative fines of $7000 or more and have at it. Yank the license. Be done with it. Why screw around? I have to wonder if the FCC really DOES want to do anything about half the crap that goes on. Of course, if they're getting ready as they may already have done - selling Ham up the river with BPL or some other scheme to wipe out Ham as we know it, they won't have to bother enforcing anything anymore. Just make it illegal for ALL to be there. ONE CLEAN SWEEP. IF BPL or whatever produces as much interference as it is thought - then no one will be able to talk and well..... eventually, they will shut their systems down for lack of interest or an audience as the case may be.

Then there is the flip side of the coin. Enforcement takes time which relates to cash and hourly fees/wages. Though the fines COULD pay for the costs incurred, they have to be finalized through the legal system. That can take a while and well, some may be wiped out with a "not guilty" verdict. So, bottom line... Unless they have a hard core case, ham radio will go into the trash barrel because of all the crap allowed to go on.

I don't think it is "just" Riley, after all, he does have "bosses". What the collective ham community who wants to preserve it's good nature - needs to do, is start sending mass petitions to the "Chairmen" of the FCC to demand

action be swift and just on those who choose to violate the laws. Just like you go to council in your borough or City to demand a crack down by Police to quell hot spots in speeding or other activity. You've got to speak up to those in control. Talking to the "cops" gets you no where, they don't make the laws or have the authority to start spending time on any single issue. They too have bosses - those in local government. SO, you got to go over their heads if you want more action.

Personally, I give Ham about 5 - 10 more years and it will be DEAD. For many reasons. Technology being one, lack of oversight - another. Ham radio prices high as they are, are not enough to keep the bad bunch off. Code isn't enough either. It hasn't kept those from transgressing onto 10 meters! Has it? NO..... With used H.F. rigs available at Hamfests and so on, there is NO control. NOTHING will stop those from getting on illegally if they choose to do so. It's the beginning of the end for what "was" a nice hobby. This country is beginning to be more and more like the wild west. LAWLESS. Many have shucked - obeying the law of the land. With that attitude, it can't get any better.

Just me!

Since there are something over 230 "DX entities", you have a daunting
research and collation task on your hands.

Or you could hit the web and point your browser at
http://www.iaru-r2.org/hf_e.htm for a reasonable summary.

What's *his* problem? As long as you're not splattering, speech compression in a contest is a good idea, isn't it? (If you're splattering, it's a bad idea, period).

> code to 13wpm, takes the time and trouble and expense to take the tests.
> Then in his first QSO is chastized for using "my first personal is"
> instead of "My name is", so they quit?

The person in Hans' story was on a repeater, using an HT. While it's not stated explicitly, the implication is that the newbie was a brand-new Tech.
>
> I can only assume Hans is telling the truth, as he seems a pretty
> straight shooter to me. I draw a different conclusion tho'. Mr Newbie
> Ham was waaaayyy too sensitive, either from embarrassment or ego.

Of course it was a made-up story, as Hans has written.

My take on it is somewhat different.

First off, nobody with any sense says "first personal" in normal conversation. That's cb slang, pure and simple, and it has no place in amateur radio. Period. If somebody wants to talk like that, 27 MHz is the place, not 2 meters. Q signals on voice aren't as bad, but they're usually not good operating practice.

But on-air lectures aren't the way to stop those things. Better to simply set an example and ignore the newbie's mistakes unless they are rules violations. I've had folks tell me their "first personal here is Bob" and I simply reply "my name is Jim" and on with the conversation. Pretty soon they get the idea that a one-syllable word that everyone recognizes is better than four syllables in two words, without any lectures. Even if they don't pick up on the example, it's not illegal, just silly.

The second thing about the story that I find odd is that 'Jim" didn't appear to listen to how hams talk on the air before jumping in. Most newcomers I've come across at least do that for a short time, getting the feel for the form of a contact and other practices before talking.

They tend to imitate what they hear, too.

The third thing is that even though the lecturer took great pains to be nice, 'Jim' was still driven off.

The moral of Hans' story seems to be "Don't ever tell anybody how to operate, no matter how nicely, because they might be driven off." The implication seems to be that we should accept any sort of behavior on-air, rather than risk offending anybody. The paradox is that the story has the tone of a lecture!

When I started out way back in 1967, ARRL sent me an article called "Your Novice Accent" that explained in clear terms how-to and how-not-to. Of course it was aimed at the typical crystal-controlled CW-using Novice of those days, but the concept was sound.

> We cannot control how others talk. The simple attempt to control teh
> behavior often reinforces the behavior.

Yep. But that does not mean "anything goes". Which will happen if we keep *too* quiet.

73 de Jim, N2EY

...who does not say "destinated" either......

OT story: Some time back, a telephone conversation with some service desk or other resulted in the person on the other end asking for my "social". I had no idea what she meant, asked her to repeat it a few times, etc. She actually started to get impatient, as if I were playing games with here or just being a bit dim.

Finally she said she just needed the last four digits. Finally dawned on me that what she wanted was my social security number! (It was an appropriate request for the call). I'd never heard that one before. I must be getting old....

I agree with Jim.

A few years ago an AMATEUR sailor from landlocked Minnesota safely crossed the Atlantic in a 10-foot wooden boat. He obviously understood the seakeeping capabilities of his vessel and practiced good seamanship.

The loss of the Titanic, crewed by PROFESSIONAL sailors, can be laid squarely at the feet at their obvious ignorance of the seakeeping capabilities of their vessel and poor seamanship.

If we read the latest enforcement letters, the bulletin "service" is
not an issue. Not being an issue, it is not germane to any enforcement
or legal actions.

Scofflaws usually provide multiple ways to be tripped up....

As a KVG fan, I'd have thought you'd be the one person here to see the
moral of the story, because it echos the theme of almost all of his
work, which boils down to "BE NICE, DAMN-IT!"

"Pretend to be good always,
and even God will be fooled."

> usually not good operating practice.

I use QSL in voice contesting simply because everyone eles is doing it,
but in normal QSO's on HF, I use plain english, except when saying
things like QSL card, which is what it's name is. I do use some of the Q
signals when I type tho'. But my skin crawls when I hear somone say HI HI!

Pardon the pun, but it would be much more manly of Riley if he got Baxter
off the air before Baxter's license expires. Revocation would send a much
stronger message.

Of course it's more manly to drop Baxter's license. I got a
feeling that he's in for a rude surprise in the coming months.
Regardless, the FCC would have serious doubts about renewing
K1MAN's license next October 14. All I know is that someone at FCC is
working the case now. I got the impression that Baxter's reply to
Riley only served to anger the guy. At the risk of sounding like a
a**kisser here, Riley doesn't appear to the a man you want to tick
off. There's too many instances of where he's went from friendly
advisory tonotces, to multiple warming notices to the dreaded
expensive NAL/FO and even a hearing notice for revocation.
Riley's got a diffucult job and those that do break the rules
only make things much more difficult. Riley seems to understand and
let slide minor things like a very rare minor profanity, as long as
the person making the minor goof doesn't make a habit out of it. He's

got bigger fish to fry, to be honest and is a guy who is qsl a lot of times.
What some people call ineffective and a paper tiger, I see differently. He's showing a lot of patience with people who break the rules and only goes after the major rule-breakers. Heck, K1MAN had actually gotten Riley off his back for a while by shutting down temporarily, but, when K1MAN started up again with the matginal rulebreaking, then, Riley had to resume the investigation. He's liked some of what he's seen and not others, as evidenced by recent letters. I, for one, am glad that Riely isn't taking an extreme hardline view here and he's reasonable as well, judging from some of the things I've seen. Several people that got into trouble with the guy fully cooperated with the matter being looked into and if the person admitted their fault to Riley's satisfaction, the matter was dropped in a fair manner. Those that drew his ire with willful and continued violations of the rules deserved their fines, IMHO. Riley isn't Saddam, Castro or any other dictator who punished for the slightest violation, yet, some people wither want a Stalin type response or they blast the man for being too soft.
Heck, if I had the equipment and the right ticket, you'd hear me talking to the guy as a friend, as we are all supposed to be in this hobby, correct? Ham is the greatest equalizer since the Grim Reaper.

Amateur Radio Newsline™ Report 1419 October 22, 2004

Amateur Radio Newsline report number 1419 with a release date of
Friday, October 22, 2004 to follow in 5-4-3-2-1.

The following is a Q-S-T. A ham down-under finds a way to evaluate
the effect of B-P-L on your station while hams in California keep a
hospital in contact with the outside world. Find out the details on
Amateur Radio Newsline report number 1419 coming your way right now.

THE BPL FIGHT: AUSTRALIAN HAM DEVELOPS ON-LINE BPL IMPACT EVALUATION
TOOL

A new tool to help hams evaluate the impact of Broadband over
Powerline has just been made available on the Internet by an
Australian radio amateur. Its based on the work of a European
consortium that's trying to set a world standard for B-P-L
radiation
limits. Owen Duffy, VK1OD, is the ham who made it happen:

--

Current BPL technology works by conduction of signals in the radio
frequency spectrum up to about 100 MHz. Existing power lines
networks are not ideal RF transmission networks, they will radiate
radio frequency energy causing interference to radio communications
services, and they will be susceptible to interference from nearby
transmitters -- radio or otherwise.

The European Committee for Electrotechnical Standardization,
CENELEC, are developing a standard for "Electromagnetic emissions
from access powerline communications networks". Access powerline
communications networks are commonly termed Broadband over Power
Lines or B-P-L.

The proposed CENELEC standard does not automatically apply globally,
though countries like Australia draw heavily on international
standards, such as CENELEC's for their own jurisdiction.

This proposed standard would set limits for the conducted energy and
radiated energy of B-P-L systems. The radiation limit is specified
for example as a field strength in dBuA/m in a measurement bandwidth
at a specified distance on particular frequency, and its impact will
not be immediately apparent to most radio users.

Do you know what the impact of +4dBuA/m in 9KHz at 3m is on your receiver?

The B-P-L Interference Evaluation Tool allows evaluation of the impact of B-P-L interference under the proposed CENELEC standard given a set of location / application specific parameters.

Go to the BPL Interference Evaluation Tool at www.vk1od.net/bpl and enter the details for your site and discover the impact. The URL again is www.vk1od.net/bpl .

--

Again, the VK1OD B-P-L Interference Evaluation Tool is on the web at www.vk1od.net/bpl. (WIA News)

**

THE BPL FIGHT: FCC RULE CHANGES TO PROMOTE BROADBAND

Back here in the United States, very little attention appears to have been paid to two other FCC actions amid last weeks FCC decision on BPL. But both are designed to help promote different forms of broadband Internet access. This is important because they will be giving Broadband Over Powerline a run for the corporate dollar profit. Amateur Radio Newsline's Bruce Tennant, K6PZW, has more:

--

In another vote taken at their October 14th meeting, the FCC loosened restrictions on fiber-optic networks built by local phone companies, encouraging them to make greater investments in so-called "fiber-to-the-curb" and "fiber-to-the-home" networks. According to the Commission, and as reported in a bulletin from C-Q, the ruling will encourage deployment of fiber optic broadband networks capable of delivering advanced data, video and voice service" by local telephone companies.

Prompted by the decision, several big telephone companies said they would move more rapidly to build fiber networks to homes. S-B-C says it now plans to provide 18 million households higher speed Internet services in two to three years, rather than five years as previously announced. . So far, Verizon Communications has been the most active in building residential fiber networks.

And there is more. The day after the BPL vote was taken, the FCC's Wireless Telecommunications Bureau announced a joint effort with the U.S. Department of Agriculture's Rural Utilities Service. This, to advance the deployment of broadband wireless telecommunications across rural America.

Its called the "Rural Wireless Community VISION Program. Its purpose is to bring experts from both agencies into rural communities selected as models to help provide technical, financial and other assistance in launching wireless broadband services in those areas.

All of this adds up to a lot of competition for B-P-L from the day it gets going.

For the Amateur Radio Newsline, I'm Bruce Tennant, K6PZW, in Los Angeles.

--

As we go to air, it is unclear whether either of these actions are efforts to promote multiple types of broadband, or, possibly a no confidence vote in the long-term potential of B-P-L.

More information on the program is available online at http://wireless.fcc.gov/outreach/ruralvision/index.html. (CQ)

**

RESTRUTURING: NEW UK INTERNET LINKING RULES

Across the Atlantic, some new procedures have been announced by United Kingdom radio regulator Ofcom. This, for the issuing Internet-linking Notices of Variation for U-K hams. Jeramy Boot, G4NJH, is in Nottingham with more.

--

Following a period of consultation, the following new procedures have been agreed between Ofcom and the RSGB. All current Internet linking NoVs will expire on 31st December 2004. Existing NoV-holders and new applicants will be able to apply for new NoVs from 1st October. The three-month period between 1st October and 31st December will allow for the continuity of the present
network to be maintained.

If you currently hold an Internet linking NoV and you wish to continue providing an Internet gateway beyond 31st December now is the time to apply for your new NoV. If you do not apply for a new NoV, the service you currently provide to the amateur radio community must cease on 31st December.

The method of application is totally web-based, and further details and a series of 'FAQs' can also be found on the RSGB website.

Jeramy Boot, G4NJH

--

Here in the U-S-A we take Voice over I P interconnects for granted. In most other nations hams are required to get special permission to connect their stations to the Internet. (GB2RS)

**

Break 1

Its time for you to identify four station. Linda Reader, N7HVF, if you please:

"From the United States of America, We are the Amateur Radio Newsline, heard on bulletin stations around the world, including the W7FP repeater serving Salt Lake City, Utah."

(5 sec pause here)

**

RESCUE RADIO: HAMS SUB FOR PHONES IN SOCAL HOSPITAL OUTAGE

Its ham radio to the rescue once again. This, when a construction accident takes out telephones, faxes, Internet and all other outside wireline communications at a southern California hospital. Amateur Radio Newsline's Joe Moell K0OV has the details.

--

Imagine that you're a nurse in the Intensive Care Unit of a hospital. You need to contact a doctor at his home or office, but you can't get an outside line on the phone at your nurses' station. That's what happened on October 6 at Tustin Hospital Medical Center in southern California. At a construction site next to the hospital, earthmoving equipment dug up 50 feet of telephone trunk lines, severing a 400-pair cable and damaging a 200-pair cable.

Following its previously-drilled procedures, the hospital's Director of Safety contacted the Hospital Disaster Support Communications System -- HDSCS -- an ARES group dedicated to the support of medical facilities in Orange County. In 30 minutes, the first ham had gotten through rush-hour traffic and arrived at the hospital to set up a communications link to the outside.

As more hams arrived, they deployed to the emergency Command Post, switchboard, Medical/Surgical unit, Pediatric unit, Intensive Care Unit, and the new Emergency Department. Meanwhile, the group's leader, April Moell WA6OPS, and two other base station operators prepared to make and receive phone calls in behalf of the THMC. Message traffic began to flow immediately after the operators got on station, as hospital staff members re-established links with their patients' physicians on the outside.

--

WA6OPS: "Go ahead, W6KOS."

"Please advise ICU, I got the service, it was a message machine. I put a message on that machine to call the number that you gave. I also gave it my number. If there's any other way they want us to try to get hold of him, we'll do it. Please advise them that we have called."

W6KOS: "Will do, W6KOS."

--

When phone company workers stated that repairs would take at least six hours, HDSCS began calling more members to provide relief to the first responders. By 9:30 AM the next morning, when the last telephone pair was spliced and the outage was declared to be over, four shifts of HDSCS operators had worked within the facility. Twenty-four hams participated in all.

This was the 85th time that HDSCS has activated to provide support when telephones failed or overloaded at hospitals, for reasons ranging from equipment failure, to cut cables, to natural disasters such as earthquakes, floods, and wildfires. It was the fifth activation so far in 2004. Each of the 80 members has his or her own Go-Kit, ready to take to any of the 34 supported hospitals to establish communications.

For more information on HDSCS -- and how hams in your community can organize to provide rapid response like this to hospitals -- point your Web browser to www.hdscs.org. Those are the initials for Hospital Disaster Support Communications System, followed by dot-org. From southern California, this is Joe Moell K-zero-Oscar-Victor, for Amateur Radio Newsline.

--

Among the hams responding to this emergency were Newsline's 2003 Young Ham of the Year Jay Thompson W6JAY and his father Richard, WA6NOL. They, and all of the others who volunteered are another good example of Amateur Radio ready and able to step in when commercial lines of communications fail. (K0OV, ARNewsline™)

**

RESCUE RADIO: STUDY SAYS THAT CELL PHONES IN HOSPITALS MAY PRESENT RELATIVELY FEW RFI HAZARDS

Cellular telephones may not pose the big risk in hospitals that was once thought. At least according to Dr. John Halamka who is the chief medical information officer for the Harvard Medical School.

According to Dr. Halamka, three years ago the school held a conference on the subject of hospital versus cellular telephone RFI issue. Attending were some 100 engineers, the Food and Drug Administration, wireless providers and businesses.

At that meeting the group determined that cell phones only pose a threat if they are within three feet of medical equipment. So, says Dr. Halamka, the current widespread hospital restrictions on cell phone use are probably greatly overblown except at locations where phones may audibly disturb patients or staff.

So will this report ease restrictions against cellular phone use in hospitals? Probably not because no study can cover all eventualities and most hospital administrators feel it better to safe than sorry.

The full story is on-line at
http://www.usatoday.com/tech/wireless/phones/2004-09-27-hospital-phone-use_x.htm (CGC)

**

COORDINATION: SERA RESCINDS MANDATORY TONE POLICY

According to the Repeater Users Internet remailer, the South Eastern Repeater Association has rescinded a controversial mandatory tone access policy enacted last summer. One that would have required tone receive and transmit on all new FM voice repeaters now, and on existing repeaters by July of 2006. Postings to the remailer say that numerous complaints lead the SERA Board of Directors to repeal the policy at a meeting on October 4th. (Repeater Owners / Users Remaler)

**

ENFORCEMENT: FLAT SCREEN TV FOOLS RESCUE SATELLITE

An Oregon resident has been told he could face a $10,000 fine if he continues to use a new flat screen television set that is radiating a high power spur on the International Distress Channel of 121.5 MHz. This, after an October 2nd visit by a contingent of local police, civil air patrol and search and rescue personnel.

Chris van Rossmann of Corvallis owns the year old Toshiba flat screen T-V. Unknown to him, the set was radiating a signal that was strong enough to be heard by the orbiting Sarsat Cospas search and rescue
satellite. From there it was relayed the Air Force Rescue Center at Langley Air Base in Virginia which activated a search.

Van Rossmann found out about his broken television set when the search team knocked on his door. They were expecting to find a malfunctioning portable emergency transponder like those carried on boats and in light plans. Instead their T-hunting gear lead them to the college students T-V.

This is not the first time that an errant piece of ground based electronic gear has fooled the Sarsat Cospas rescue satellite. About 12 years ago the crystal oscillator in an inadequately shielded broadcast graphics machine brought a similar response to a production studio in New Jersey. In that case the Ampex Digital Optics unit was quickly retired from service.

Van Rossmann is faring a lot better. Toshiba has contacted him and offered to provide him with a replacement set, for free of charge. (Published reports)

**

ENFORCEMENT: SANTA CRUZ PIRATE SHUT DOWN BY FORCE

Government agents have shut down another unlicensed broadcaster. On September 29th agents of the U.S. Marshals Service served a warrant on a Santa Cruz, California pirate radio station.

The target was Free Radio Santa Cruz, an FM station running 35 to 40 watts of power while offering round-the-clock music, activism and other local programming.

The marshals, along with agents of the Federal Communications Commission, dismantled the station's equipment and carted it away in a pickup truck. The warrant bore no names, listing as defendant any and all radio station equipment used in connection with the transmissions.

Those running the station face the possibility of further punitive action in the form of hefty fines and even time in jail. The search warrant gave the station operators 20 days to respond in court. The value of the equipment seized is estimated at $5,000, including the antenna agents removed from the roof.

More on this raid is on-line at www.mercurynews.com/mld/mercurynews/news/9797653.htm?1c (CGC, Mercury News)

**

COMMUNICATIONS LAW: TELEMARKETERS LOOSE IN SUPREME COURT

The Supreme Court has turned away a challenge to the federal do-not-call registry. The ruling came on Monday, October 4th and upholds the lower court ruling that says the list does not in any way violate telemarketers rights to freedom of speech.

Under a federal law passed in 2003, telemarketers face fines of up to $11,000 if they call people who sign up for the registry unless they have recently done business with them. Charities, those conducting polls and callers on behalf of politicians are exempt. (Published reports)

**

ALERT: POSSIBLE E-MAIL SCAM TARGETING HAM RADIO

If you get an e-mail with a subject line saying Golden Trust telling you that you have won a lot of money, and its from hamemergency at some unknown dot com, toss it. It may well be another Internet scam targeted to Amateur radio.

Ray Shatzel, W2XC, says over the Internet that he received such a solicitation recently. It told him that he had won $1,500,000 in the Lottery Winners International program held on the July 7th of this year.

Curious, Ray checked it out on the fraud watch international dot com website. There he found out that it is nothing more than another of

the many e-mail scams aimed at getting people like you and me to part with personally identifiable information that could be used in an identity theft scheme. They will also ask for payment of taxes, legal fees or other charges before the winnings can be released. People who fall for it loose what they send in and maybe a lot more.

Our thanks to W2XC for posting this warning to the Internet . He's
one of the good guys who took the time to find out and to pass along the information so that nobody in the ham radio community gets stung. (via Internet)

**

ON THE AIR: HAM RADIO TO CELEBRATE DEDICATION OF CLINTON MUSEUM

Turning to the ham radio happenings, word that special event station W5C will take to the airwaves on November 13th and 14th from the Historic Arkansas Museum. This, to help celebrate the dedication of the William Jefferson Clinton Presidential Library. Operation will be on 40 through 15 meters using various modes including PSK 31. Those making contact will receive a special certificate in exchange for their Q-S-L card sent to Dennis Schaefer, W5RZ, 181 Schaefer Drive, Dover, Arkansas, 72837. (Via E-mail)

**

THE SOCIAL SCENE: GREAT LAKES SUPER SWAP IN MICHIGAN IN NOVEMBER

And the combined 2004 Great Lakes Super Swap and ARRL Michigan State Convention takes place November 5th and 6th at the Harbor Lights School in Holland, Michigan. This years special guest is League President Jim Haynie, W5JBP, who will speak both at the ARRL forum and at the Saturday night banquet. For more information on this fun event take your web browser over to www.hollandarc.org and click on the words swap info. (Via E-mail)

**

BREAK 2

This is ham radio news for today's radio amateur. From the United
States of America, We are the Amateur Radio Newsline with links to the world from our only official website at www.arnewsline.org and being relayed by the volunteer services of the following radio amateur:

HAM RADIO HELP: ARRL JOINS HOLIDAY TOY DRIVE

The ARRL is joining with the United Way in a project to brighten the lives of kids who lost everything in the recent hurricanes that ravaged Florida.

--

Thats right Don. The ARRL is joing forces with a special United Way drive aimed at brightening the coming holidays for kids in central Florida who might not otherwise be able to enjoy the season. They are the youngest victims of the fall hurricanes that ravaged the area. Suddenly living out of a tent or car.

To help these kids, hams nationwide are being asked to purchase a new child's toy and send it to this special United Way campaign. Be sure to include a QSL card or 3x5 file card showing your name and callsign.

Send your donated toy before Thanksgiving to Ham Radio in care of the The United Way White Dove Project at 50 Kindred Street, Suite 207 in Stuart, Florida. The zipcode is 34994.

As we have often said, children are the future of the nation and the world. They, more than any others, really deserve your support.

For the Amateur Radio Newsline, I'm Bill Pasternak, WA6ITF.

--

Again, between now and Thanksgiving, purchase a new child's toy. Send it with a QSL card or 3x5 showing your callsign to Ham Radio, in care of The United Way White Dove Project, 50 Kindred Street, Suite 207, Stuart, FL 34994. We will and we hope that you will too. (ARRL)

**

ON THE AIR: HZ1AB PERMANENTLY QRT

The Dhahran Amateur Radio Club has been permanently shut down. This, as the result of telecommunications regulatory changes in Saudi Arabia.

For close to sixty years the Dhahran Amateur Radio Club operated station HZ1AB. Club Secretary Thomas Carlsson, AB5CQ reported that due to revisions made in Amateur Service licensing requirements by the Saudi Arabia Communications and Information Technology Commission, operations were no longer possible.

The HZ1AB callsign has already been reissued to Bandar Salah AL-Harby. Carlsson says that the clubs QSL manager, Leo Fry, K8PYD still has all the logs and will process any outstanding QSL card requests. (WIA News)

**

CONTESTS: RCA QSO PARTY - NOVEMBER 6TH

From the contest calendar, word that Saturday, November 6th is the date for this years Radio Club of America 20 and 75 meter QSO Party. The event will start at 4 p.m. Eastern Standard Time on 14 point 280 MHz upper sideband and at 8 p.m. E-S-T move to 3 point 910 lower sideband. Both frequencies are plus or minus any Q-R-M. During the party, W2RCA which is the club station of the Radio Club of America will also be activated. Logs and suggestions for this contest go to W2ZE by e-mail to mrraide@cbs.com (W2ZM)

**

CONTESTS: FISTS COAST TO COAST ON NOVEMBER 24

The 4th annual Fists Coast to Coast contest takes place October 24th from 0000 U-T-C to 2400 UTC. This is a CW only event with the object being to contact as many Fist affiliated clubs on as many bands as you can. The contest is sponsored by Northwest Fists club K7FFF. Full rules and certificate information may be found at //www.tomochka.com/k7fff/fnw_c2c04.html (FISTS)

**

DX

In D-X, OH2BH and OH2PM will be in Albania from October 26th to the 31 finalizing Project Goodwill Albania and related activities with the hope of bringing a number of new students on the air. Both operators will be on the air from Albania during the C-Q World Wide SSB contest on October 30th and 31st signing portable Zed A. During this trip the two will be accompanied by representatives of the I-A-R-U folks assisting Albanian Telecom in variety of regulatory issues. QSL cards for contacts made go to the operators home call address. (N4GN)

Also on for the CQ Word Wide SSB contest will be eight operators from the North-East calling themselves Team Antigua. will again activate as V-26-B from Antigua and Barbuda on October 30th and 31st and plan to enter the multi-operator two-transmitter category. Operation will be on all bands with a possibility of some satellite contacts on AO-7 and AO-51 More information is on line at http://n3oc.dyndns.org/v26b/ (KA2AEV)

**

WITH THE YOUNG: THE NORTH AMERICAN YOUTH NET

The North American Youth Net meets every Friday at 23: 00 UTC on 14.329 MHz. According to Steve Anness, KD5OWO, the purpose of this on the air gathering is to get young hams together for technical discussions or just a chance to meet and get to know one another. If you are interested in becoming a Net Control for this gathering e-mail Steve at kd5owo@arrl.net. You can also visit the groups website at http://groups.yahoo.com/group/nayn (KD5OWO)

**

THAT FINAL ITEM: HAMVENTION 2004 THROUGH TEENAGE EYES

And finally this week, its the Dayton Hamvention as you have never seen it before. This is because its through the eyes of the young. And while we can't show you the pictures here, we can bring you some
of the sound:

--

Sara K3OOO: "So you are probably thinking, OK I'm into this, but how
do I get my license? Well, there lots of stuff. There's study guides. Real cheap. Real easy. You go home. You study for a while and do take your test and you pass and you get your license. No Internet. No wires required."

--

That's 15 year old Sara Saeger, K3OOO, who, along with 18 year old
Trevor Conroy, W7TDC, are hosts of a new video about Hamvention 2004 produced for Icom America by of John Webb, W7NWH. But this show is not a commercial for Icom brand ham radio gear. In fact, its as if John borrowed a bit from Cole Porter's grand old Broadway musical.
The one whose title is "Anything Goes":

--

Trevor W7TDC: "Right over here we have DX Engineering, a manufacturer of components that actually allows you to build your own antenna. Antennas can be big. Antennas can be small. But theres one thing thats true about all of them. They all get your signal in the air."

--

Thats the other half of the anchor team and if Trevor sounds excited about building antennas it's because he knows just how much fun it
can be. And while Sara and Trevor are our guides, they are not only young people in the new Icom show. Meet Rebekah Dorff, WG4Y, of Alabaster, Alabama:

--

Rebekah W4GY: "Ive been a ham since I was 8. I got my Tech when I
was 8, my Extra when I was 9 and then I got my DXCC when I was 10 and then I got appointed as the Assistant Section Manager this year."

--

The bottom line. This is a new world of Amateur Radio and a lot of young people are getting excited about it once they find out just how much fun it can be. Thats because it gets you away from a computer screen and gives you new friends all over the world:

--

Unidentified youngster: "Hopefully I will get my license today and I
will finally be able to talk to Russia."

--

If you are one of those who really care about the future of ham radio and want to see what it looks like through Sara and Trevor eyes, then go to www.icomamerica.com/amateur/video and have a look for yourself. Better yet, have your kids -- or your friends kids watch the show with you. Once you do, we guarantee that none of you will ever view ham radio the same way -- ever again.

Our thanks to Ray Novak, N9JA, and the fine folks at Icom America for funding this important new ham radio video and making it available on-line. Again that URL is www.icomamerica.com/amateur/video on the World Wide Web. (ARNewsline™)

**

NEWSCAST CLOSE

Which does not mean there's anything wrong with your 18 wheeler,
either, except for the loose nut holding the steering wheel....;-).

> Did the pilot and Captain not know the handling characteristics of the
> ship? They should have.

There was no pilot.

Most of the officers were transferred as a unit from Olympic, which
was Titanic's older and slightly shorter sister. Captain Smith was
Olympic's captain before Titanic, and was certainly familiar with her
characteristics. He was routinely assigned to the newest White Star
ships to essentially "write the book" on them.

In fact, Smith was the senior captain of the whole White Star line,
and was supposed to retire before April 1912. He was persuaded by
Ismay to do just one more round trip, closing out his career with the
first voyage of Titanic.
>
> Frankly that BBC story smacked of the "Everything you think you know is

> and the guy they called the coward was actually the hero, blah, blah,
> blah....

Some new data has come to light since the wreck was found. For
example, it was not known with certainty before that the ship broke in
two. The brittleness of the steel, particularly the rivets, was
documented from actual samples.

> If the Titanic had not been simply scaled up from smaller designs, it

A "sealed top" design would be impractical - and completely
unnecessary. It was known soon after the disaster that if the
watertight bulkheads (transverse walls between compartments) were just
one deck higher, the overflow would not have occurred. But the
bulkheads did not go one deck higher.

It's exactly the same principle is why. They were outdriving their
vision, which is suicide in any mode of transport that depends on
seeing what's ahead.

> The rudder was sufficient to maneuver the ship at a certain rate at a

>
Exactly!

The designer was aboard Titanic, and went down with her.

If you haven't seen it, I highly recommend the book and film "A Night
To Remember".

Of course. The exception that proves the rule.

> I'm an Extra and I don't even have my basic DXCC.

Me neither. I'm not into DXing that much.

>I could see the
>same might apply to contesting too.

Sure.

The discussion quoted above was about admission to a very serious DX/contest club. Their standards are high, and their goal is to win. Not having an Extra is an easily-avoided disadvantage, and that the applicant didn't understand that was an indication that he didn't really understand what the club is all about.

Heck, if I applied, they'd probably ask me what logging software I use in contests. And when I told them I use paper logs, they'd probably say:

"What's *your* problem, Jim?"

>I have no idea how or IF the FCC goes about
>"monitoring" the bands.

From what I have seen for many years, they don't do that very much any more. What FCC does is to respond to complaints.

But the complaints have to be substantive. "So-and-so was on 75 meters last night and was jamming" doesn't cut it. An audio tape of the the offensive transmission, and a signed letter with date, time, frequency and other pertinent info is what FCC wants.

A single complaint isn't going to get much reaction, usually, but a bunch of them from different people will.

>I thought that was what the "elite" Official
>Observer (OO) club was for. You know, the bunch that the ARRL makes you test
>for and then says you're a qualified "turner inner"?

That's not the purpose nor the function of OOs at all.

The Official Observer idea is to *avoid* FCC involvement. Originally, it was about signal quality - being in the band, having a clean signal, etc. Hopefully an OO would tell you about an out-of-band harmonic or a clicky signal before FCC did.

Nowadays such technical violations aren't so common, but operating violations still happen. Like not IDing often enough.

Newbie Dee didn't shrink away from the task.

Hans, please note that I said various, and not "all." Anyone can
bumble about and get 180 or 190 so called countries. That last 40 or
so probably require a slightly different strategy. Would you choose
to remain ignorant of the operating priveleges of those last forty
countries, or would you work smarter, not harder?

And there you have it!

Thanks, bb

1. Nope. Just a straight clip of what Kelly and Micolis exchanged in
RRAP. "Don't blame me, I'm only the messenger," another PCTA once
told me. Hi!

2. Sure.

3. Sure.

4. He's in denial. You're still getting the attributions wrong. Hi!

5. I use Google. I read one thread at a time, and respond as appropriate. Too bad.

6. You did not apologize with the intent of sorrow or remorse. Your so called apology was very narrowly focused, merely buying you time while you continue to check out all other possible avenues for calling Hans a liar. I think you even called Hans "slimy." Hi!

Left Face!

Right Face!

About Face!

Two Face!

As you were! (two faced)

Hi, hi!

> >But in the end, I'm sure you'll get your
> >apology because he's told us before that he admits when he's wrong,
> >even though I've never seen an apology from him.
>
> You only see what you want to see, Brain.

I've since seen your apology. Pretty lame stalling tactic while you
have an ARRL Staffer decide if Hans is a liar.

No intergrity is your accusations, and no integrity in your apologies.

Your word isn't woth much.

Hi, hi!

> Obviously Hans saw the apology after reading a little bit. Strange,
> though, since he "responded" to posts made AFTER those comments, yet stated he
> didn't see those. Oh well...He DID see them and DID respond accordingly.

Strange is Steve. Steve is Strange.

You need an apology for my Somalia operation???

You go to hell.

> How long does it take YOU to make an apology for mistated, untruthful or
> errant posts, Brain?
>
> Steve, K4YZ

I've apologized to Dee. I thought she was wrong, I -said- she was
wrong, she was not wrong, and I stood corrected. That's how it works.

Yet you want an apology for my having an OPINION???

You're NUTS!

Scorn for a mere Advanced Class licensee thinking he could compete in 2003.

Hi, Hi!!!

Maybe Kelly can tell us if this "fool" was accepted into the den of inequity.

Alun, even Heil had that attitude about my DXing on the 10M SSB
"kiddie band."

Welp, the contacts were valid regardless of his attitude.

There's just something wrong with with some of these Extra's.

As far as contesting goes, even the heavy hitters come looking for the
little pistols late in the game trying to run up the contact #'s. I
guess I made a bad assumption thinking that everyone who wanted a part
could have a part.

Elitism at it's worst, but I already knew it about these guys.

W3RV, N2EY. See the attributions. Oh, nevermind. Forgot you can't
"decipher" them.

> 2. Talking about a specific club with specific requirements.

If it is so specific, please name the -offending- club.

> 3. Talking about a specific club with specific requirement.

If it is so specific, please name the -offending- club.

> 4. Does he need to?

a. No, the attributions are correct regardless of whether you can
read/interpret them or not.

> It certainly doe NOT affirm YOUR assertion, Brain.

Doe a deer...

Google archives don't lie. Your master is guilty of license-class
elitism.

I'm curious how it will be protected from Amateur radio during the next sunspot peak. Perhaps we will go to war with the offending countries?

> Kaboom. End of discussion.

Phil, you are a lawyer. How often is the end of discussion the end of discussion?

Sometimes it is a simple as metal shielding inside the case. Just don't put it in. Over a few hundred thousand monitors, that is quite the savings in parts, shipping weight, and labor.

1002. My question is.....

Newsgroup: rec.radio.amateur.policy
Date: 2004-10-23 01:33:05 UTC
From: Kirk <kirknospam@yahoo.com>

My question is:

Why hasn't Riley and the FCC spent the time, effort, and funds, on ending ND8V's reign of terror on the bands, as they have on ending K1MAN's bulletin service? ND8V and his group are a major embarrassment to your service. ND8V is nothing but a radio terrorist. Plain and simple. If you disagree, you obviously have not heard him on 14.272 lately.

Do you anti-K1MAN folks not see a problem here???????

I can see K1MAN's point. If the ARRL can have a bulletin service, so can he.

The ARRL also has stuff For Sale on their web site too, so that argument holds no merit with me.

Kirk - SWL

Because you mention "offending countries" I presume you expect DX signals might interfere with BPL.

Since even the very loudest DX signals will measure in the microvolt range, they will not have any effect whatsoever on BPL here.

And there you have it. Your point about people not knowing about
anything below 70 MHz is pretty good, and it appears to be engineers too.

I always though that one of the reasons that we have the spectrum we do
on HF is that for as much fun as it is, HF is an unruly beast of a
neighborhood Propagation effects, sometimes the lower bands simply go
dead - which would probably be the time that BPL works best - and that
sunspot cycle waiting to rear its ugly head. Certain sections are known
for worldwide reach of relatively small signals. For us that is cool,
but for most services it is bad indeed. How many radio stations would we
have if all the stations around the world had to be on 20 meters?

TO put it another way, I wonder how many RF engineers are involved in
BPL design? My suspicion is that there are precious few. Probably very
near 100 percent digitally oriented engineers.

>
>
> While old paper books remain readable for centuries.

Photographically speaking, the most archival prints are those printed
on a acid free paper, high or all rag content. Then the kicker is, the
process of washing the paper until virtually every last trace of fixer
was removed from the paper has turned out to be bad, The precipitated
silver that formes the image then has a tendency to reform into a solid
metallic silver. Better is leaving a small bit of thiosulfte from the
fixer in the picture. Initially and quickly it fades a bit, but then the
image staabilizes, and becomes as stable as the paper base. So the
improperly washed prints were the ones that we are still looking at over
150 years later.

Related story. My family moved when I was in second grade in 1962. At
that time, we rented one of the old Bell Telephones. I think it was made
by Western Electric? Any rate, it was your basic destop model in black.
THe thing gave absolutley no problem for nearly 40 years, when they
noticed that they were paying rent for it. SO they got rid of that, and
went to the phones we get these days. I think they average about a year
per phone now.

>so called apology was very narrowly focused, merely buying you time
>while you continue to check out all other possible avenues for calling
>Hans a liar. I think you even called Hans "slimy." Hi!

1. Still doesn't change the "message", whichg has nothing to do with YOUR
assertion that "numerous Extras" thumb their noses at lower class operators.
You still haven't provided a single valid quote.

2. Yep.

3. Yep.

4. No, I'm not.

5. It doesn't matter WHERE you post from...the FACT remains that your
post was several HOURS after the initial exchange occured. You had more than
adequate time to read the posts before trying to weasle your way into yet
another feeble rant.

6. "Sorrow or remorse"....No. Sincere apology for having got the
attribute on the article's true origin, yes.

"Sorrow or remorse" is for the death of a relative or friend, or backing
ovr one of the kid's bikes.

And when it comes to "buying time", YOU are the master of that...We've
waited almost four years now for some proof of the validity of your alleged
Somalia operation, and it's been almost a year now since your silly "Unlicensed

devices" rants. If I take a week to get a response from ARRL to determine the nature of the article that I recall, "SO WHAT...?!?!

I've already proven you wrong on your assertion that I allegedly never say I am sorry or acknowledge an error. Done that in the last 24 hours. Still no apology from YOU for it...Just some lame "you really didn't mean it" claim.

Seems it was good enough for Hans, the aggrieved one in this case, to accept it.

It's just as well...If you HAD done it I'd be in ICU with a stroke at this very moment!

>> least bit hesitant to come up off of an apology when it was right to do so.
>
>I'm still waiting.

You are not due an apology from me for anything.

You've been caught lying, and I call you a liar. Nothing wrong there.

You make assertions as to your own alleged good character all the while youa re proven to be wrong...And not man enough to acknowledge YOUR errors even when fed back to you line by line.

No problem for me. Big problem for you.

>> On the otherhand, we're STILL waiting on apologies from you on your
>> falsely claimed Somalia operation and your failed claim of "Unlicensed
>devices
>> play a major role in emergency comms" assertions, even though both of those
>> have been hanging out there for MONTHS.
>
>You need an apology for my Somalia operation???

No apology for your "operation"...An apology for the false claim of legal validity of the operation. It was never legal under ANY jurisdiction.

And an apology for your claim vis-a-vis "unlicensed devices", one that still goes unanswered to this day.

>You go to hell.

Ohhhhhhhhhhh...THAT was poignant.

Think that up all on your own?

>> How long does it take YOU to make an apology for mistated, untruthful
>or
>> errant posts, Brain?
>>
>> Steve, K4YZ
>
>I've apologized to Dee. I thought she was wrong, I -said- she was
>wrong, she was not wrong, and I stood corrected. That's how it works.
>
>Yet you want an apology for my having an OPINION???
>
>You're NUTS!

Not an opinion, Brain.

You asserted as fact that I "never" acknowledge errors and that I "never" apologize, yet both of those assertions were made AFTER I had already done BOTH of those very things to Hans.

Pony up, Brain...Or is that even more of your Lenniesque "Do As I Say, Not Do AS I Do" creedo...?!?!

Steve, K4YZ

This isn't a minor question. There are those who would argue that hams should
just move to VHF/UHF, use satellites, etc.

(devil's advocate mode = ON)

Hams of almost a half-century ago were working 1000+ mile paths on 2 meters via
tropo scatter, so why do we *need* 75 meters for domestic QSOs?

(devil's advocate mode = OFF)

> Hehe, good one!

One of the problems with "economic growth" is that after a while most people have enough "stuff" and they don't need, want, or have room for more. There was a time when refrigerators were a growth industry. Now most new 'fridges are sold as replacements. The Kenmore I bought in 1978 up in Palmyra, NY was still going strong in 1999 when I sold it as part of my old house in Upper Darby, PA. I figured it wasn't worth moving - but I bet it's still there, doing the job. I bought a new one for this house.

EE is a very big field. Radio is but a tiny part of it these days. The folks who generate and distribute electric power have a different view of the electrical world. So do those who do computers.
>
>I always though that one of the reasons that we have the spectrum we do

You mean the old way was actually better than the new way? How could that be?

Still, I can pick up 40+ year old paperback books, with the cheap paper turning
brown from the acid, and still read them with present-day technology. Can the
same be said for 40+ year old computer tapes?

Yep. Probably a 500 series dial phone.

And they installed and serviced it. If you had *any* problem, a nice man in
uniform came out and fixed it - free.

>Any rate, it was your basic destop model in black.
>THe thing gave absolutley no problem for nearly 40 years, when they
>noticed that they were paying rent for it. SO they got rid of that, and
>went to the phones we get these days. I think they average about a year
>per phone now.

Sure. Ma Bell, for all her faults, was a regulated monopoly that focused on *service*. Which meant building the most reliable hardware they could, particularly for the customer environment.

One paradigm of Ma Bell was that basic service was *very* inexpensive. To have a single phone and local service cost almost nothing. But long distance, special services, extension phones and other stuff cost more, to subsidize the basic service. Not any more!

Imagine if everything in your house were built like that old black 'phone....

What game?

You mean calling you for what you are? A coward and a liar? That's not a game, Brain...THAT'S reality. It's a consequence YOU must suffer as a result of YOUR foolish decisions and conduct. No one elses.

And no luck is needed on my part. You've demonstrated years of deceit and untrustworthy behaviour. If I could be as lucky at Blackjack or the Lottery as I am at tripping you up on your own words, then I could buy the Internet a dozen times over with change to spare.

And THEN some...

You're the one who needs the luck, Brain...luck that your wife, kids, close friends (and that's an assumption on my part, other than Lennie...) and professional acquaintences don't get a chance to see what a fool you make of your own family name and character.

Yes...Best of luck to you. You DO need it.

Steve, K4YZ

Exactly! Nothing "wrong" with computer logs, or paper logs. But at the level
those folks play the game, computer logging has a definite advantage - just
like having an Extra.

Comes up as a major screwup to me. We'll see how the pros call it.
Some of them claim that the architects screwed up when they failed to
factor in the prospect of fuel explosions in addition to the aircraft
impact loads. Apparently analyses are showing that if one or another
of the tower's steel stucture had been properly insulated it might
have not come down. There's a congressionally-mandated technical
report in the works which gets into the topic in depth which should be
released soon and is reported to pass out some spankings.

Well . . at least I'm more on topic than your biker and Amish buggy
thingey?

> >
> > Sounds like fun as long as it is a drill! ;^)
> >
> Sure!

A few days into my first cruise on a carrier I was below in my
compartment when Mother Nature beckoned. A few steps down the
companionway and around the corner I'm in the head. Frigging water
dripping everywhere, the Navy's version of "cleaning the bathroom" is
to hose the entire space with a mix of hot water and steam, three
minutes and done. Thus it was when I parked myself on the throne.

I was deep into the usual set of contemplations one gets into in those situations when a bunch of buzzers went off and a deep voice boomed outta the PA system, "All hands prepare for . . ! ". Sinuous something, didn't make any sense, I couldn't follow it.

Next thing I knew the whole space got tilted to some scary angle and I slid right off the damned wet throne and landed bare-butt on the damned wet deck. Was NOT fun, dammit . . . !

> > tries to head down a winding mountain road at the same speeds the "Vette
> > can, and it crashes, it isn't the designer's fault.

A few last comments: Note that at no point in this wifty sub-thread have I disputed the fact that the Titanic was steaming too fast for the conditions. Yes, it was running too fast which had nothing to do with engineering good, bad or indifferent. The original topic (sort of) was Titanic engineering screwups.

In the engineering sense I'll stick with my contention that it's rudder was undersized vs. the design factors used to determine the size of the rudders installed on other similar ships of the Titanic's day. It's simply an indisputable matter of published numerical data. It's blatantly obvious given the fact that the Titanic almost did clear the berg that it would have missed it if the rudder had been designed to the same standards as other state-of-the art ships. If this wasn't the case the subject wouldn't even have come up 92 years ago.

I might also add one more tidbit on my way outta this nonsense. As any experienced power vessel helmsman knows rudder effectiveness drops precipitously as the forward speed decreases ("Were you driving the things?" Power vessels? Me? You bet! Have you?). This in *not* the case with Corvettes and semi-rigs and such which are irrelevant no counters in this discussion, they ain't floating objects.

I haven't seen the equations for years but I'm 90% sure that rudder effectiveness drops as the *square* of the speed. Welcome to Bernoulli's postulations. Brings up an interesting possibilty . . if the Titanic had been drifting along nice and safely at only a couple kt. the size of the rudder almost wouldn't have mattered, the thing might have whacked the berg head on and everybody would have been saved.

'Bye.

Because it sounds silly and serves no purpose. Just IMHO.

However, as I noted before, online lectures are not the way to stop it.

>They use borrowed ham slang like "handle" on CB.

Corrupting it in the process. "Handle" used to simply mean "name", and it wasn't even strictly a piece of ham jargon. cb folks changed its meaning to "a made-up name to avoid using call letters or other means of positive identification".

I remember one guy in Kentucky got pissed at hearing K4OKA and WB2OTK and the assholes down on that end of 75 meters and became an OO and actually is the one responsible for WB2OTK and Big AL the asshole getting into hot water...the guy put a couple hundred hours in with the FCC and ARRL doing what it took to get these pricks in hot water.....Hell they both read his name and call on the air out loud on several occasions because they had gotten so many OO cards from him....Thus verifying that they were the ones causing the interference and doing crap they werent supposed to be doing.

If they had never mentioned his name or call on the air ....

Nothing would have ever happened! They could have denied it all!....what a bunch of morons!

Anyway the ARRL pissed this guy off and he quit while working on getting LARDASS ND8V off the air....The ARRL needs to kiss his ass and try to get the guy back.....he was the only OO that ever got anything done. He was pretty much the sole evidence collector for the FCC at that time because the rest of the OO's in the US had their heads up their asses and pretended nothing was going on. Like they do now LOL!

ND8V is nothing but a piece of dog crap.

I take that back. I didn't mean to degrade dogs.

I'm surprise he has enough intelligence to find the power switch on his rig.

Isn't ND8V the foul mouthed ham from Michigan?

His audio sounds like he has a well used tampon in his mouth, while talking.

Regardless of what stupid game you two homos are playing, what is it that makes you think that Kerry (or Bush) would stop BPL?

The Bush administration sold us down the river. Not GW himself, but his appointees did. Was it for the "greater good"? BS. It was for the almighty dollar.

Would Kerry do better? Probably not. In fact, almost certainly not. He is motivated by $$$, and provably even more so for his ambulance chaser-mate.

What will *you* do, to keep ham radio alive?

Do you vote for a third party? Bzzzzzzzzt.. No. Thanks for playing.

Do you explain how vital ham radio is to national security? Bzzzzzzt. All they have to do is to listen to the a**holes on 75 meters with their turf wars, or (more likely) go to the internet, that is, *here*, and see what infantile cretins you are being. After reading a few page fulls of your crap, why would anyone want to give you spectrum?

I'm not talking about the majority of posters here; I'm talking about the few loud-mouthed idiots who probably never even get on the air -- or even get out of their mother's house and into the sun. But you jerks are the ones that the press is going to quote (because it is easy for them to cut and paste, instead of actually listening to a hurricane net for 36 hours). The press is lazy, just like you. Get on the air.

You delinquents are ruining our chances of keeping spectrum, and it's only because you never get on the air. How ironic. Get a radio and get on the air! You will see that ham radio is a lot more fun, and is a better public service, than anything you can do while hiding behind your

anonymous postings.

Yes, there are a**holes on the air, but that is true in real life as well.

Perhaps you, personally, could get on the air (that is, transmit) and
show people what a reasonable person would do? Are you a reasonable person?

>
> I asked him about the story without "who what when where why".

...and I'm still asking you the When and Where of those "seven
hostile actions" you claimed to experience. :-)

You haven't answered that yet. [does that sound like you are
a "coward and a liar?" :-)]

> I asked him a benign question about a "CQ" story.

Tsk. You are as "benign" as a spreading cancer cell...

> You made it a personal vendetta. Covering your butt.

Tsk, tsk, tsk...gunnery nurse made it all a prime-time project
to "apologize" by calling another names, charging plagiarism,
and generally stating unproven falsehoods about the story
content and its writer.

> You had to give your "friend" a "head's up". Turned it into a flamefest
>outside of the firepit. Why do you think it was necessary to give Rich a
>"head's up"..?!?!

Tsk, tsk, tsk. Nursie lit the matches, burned her little fingers, then
yells and yells "It's not MY fault!" :-)

> Does every inquiry about "CQ" magazine require a clarification from you?

So...nursie still hasn't found the claimed "original story that is
supposed to be plagiarized by Hans?

Too bad. It might have...for the first time in here...showed some
truth about all those unfounded charges and epithets you level at
others. It didn't. So far, all it has shown is your unstable emotional
state and inability to get along with others in a newsgroup.

> Guess this just kinda confirmed my suspicions about what kind of a creep
>you really are, Hans.

Tsk, tsk, tsk. Nursie's idea of an "apology." :-)

Must be her idea of what constitutes "civility." If she makes a mistake
the tactic is to call others lots of nasty names to cover up her own
errors...and then keeps saying she "apologizes." Tsk.

An example of modern American amateur radio highest-class
licensee in action. [very hostile action] Role model...NOT.

>6. You did not apologize with the intent of sorrow or remorse. Your
>so called apology was very narrowly focused, merely buying you time
>while you continue to check out all other possible avenues for calling
>Hans a liar. I think you even called Hans "slimy." Hi!

Gunnery nurse Yell-yell has used all sorts of epithets in his
"apologies." As an example, see the thread heading where
Hans Brakob is called "Brokeslob" (or something close to that).

Anyone continuing to not agree with Robeson's opinions is
called a "coward and a liar."

Repeated disagreement with his opinions makes one a
"'Documented' liar." ! :-)

The only way to avoid being called nasty names is to travel
in the same direction as the gunnery nurse: "His way or the
highway." Hi hi. Problem is, he is on a one-way street (without
posted signs). Not much traffic along his way...

>and understood a late but intact Titanic at the destination.
>Maybe the ship was "unsinkable" but I wouldn't want to test
>that with paying passangers aboard.

Robert, I will agree with you, but what happened to the Titanic
NINETY-TWO YEARS AGO isn't really a subject of this
newsgroup and doesn't come close (maybe a couple of light-
years) to amateur radio policy. :-)

Well, except to some who wish to turn this newsgroup into
a quasi-private Chat Room involving their own desires and
preferences...and to have them damn all others for not thinking
and feeling as they do. [yourself excluded]

For the bleeding-heart imaginary sailors aboard, I won't cry
great crocodile tears of a thousand-plus humans who perished
on the Titanic in 1912. Nope. I'll just reflect that the subject
made a LOT of money for Linda Hamilton's ex-husband and
employed many Mexican laborers on the set of "Titanic"...
many many years later with a little gilt statuette awarded for
Best Motion Picture to the producer-director. No crying great
tears on-stage on that Oscar Night.

>Boeing doesn't test fly
>new aircraft with commercial paying passengers.

Not many aircraft companies were busy working out Test
Proceedures for test-flying new aircraft in 1912... :-)

Boeing innovated the pre-flight checklist around 1940 or
thereabouts after they lost a prototype Flying Fortress (and
their chief test pilot) on takeoff.

Not to worry. U.S. amateur radio regulations are Up To Date.
They still require all amateurs to test for beloved morse code
cognition capability in order to have priveleges of operating
below 30 MHz...in the ham bands. It seems that some amateurs
bent on constantly re-living the past (in almost anything) think
that morse code skill is still the epitome of "radio operation" in
the year 2004. Very "progressive." State of the Art.

Whatever! 60 years ago Clinton DeSoto wrote:

"Among radio amateurs there is a genuine brotherhood and informal
camaraderie. Everyone is called by his "handle" -- his first name
or nickname. The president of the Chicago Stock Exchange and the
mechanic in a Birmingham garage are just "Paul" and "Joe" when
they meet on the air."

I guess I'll continue to use the term 'handle" --- seems to have good
roots.

>
> Why not just use plain English?
>

Because the use of abbreviations and operating signals which permeated
our hobby in it's early years on Morse are carried forward as part of
the fraternity. Q signals, etc, are part of the adopted lingo of our
hobby. We all understand what they mean, and they tend to identify us as
part of the 'cognosenti'.

Many vocations and avocations have a "lingo" which, while it may strike
outsiders (and uptight insiders) as "quaint" or "affected". Auto racers
say "skins" instead of "tires", bikers talk about "Hogs", not Harley
Davidsons, old time technicians say "mickey-mikes" instead of "pico
farads", sailors say "fart sack" instead of "matress cover", and some
hams say "QSL" instead of "yes". I say, who cares.... my grammar
teacher isn't a ham, so she won't catch me, and a Russian, American, or
Brazilian ham will all understand "Thanks for the QSO" but they might
wonder WTF if I closed with "I appreciate the delightful conversation".

Typical 'government out of control' bullshit.

Instead of blaming the radical towel-heads who creamed the towers, lets spank the engineers who designed it several decades earlier when the idea of driving jet airliners into office buildings was unthinkable. "Congressionally-mandated" is just another term for politicians pushing the right buttons to get a few more seconds of visibility on the evening news and having some impressive paperwork to wave at their constituents on the campaign trail.

I was at a presentation made by the head of the engineering team that
investigated the Twin towers disaster. He said that too many people
aproached it from the wrong angle They ask why did the towers fall so
quickly. A better question would have been how did they stay up so long.

Engineers so often get tarred and feathered when this sort of thing
happens.

What we really need is for engineers to accomodate ALL possible
scenarios, both KNOWN and UNKNOWN. 8^)

> devices" rants. If I take a week to get a response from ARRL to determine the
> nature of the article that I recall, "SO WHAT...?!?!

So your accusation of plagiarism stands. You apologized for the wrong
thing, which is what makes your "sincere" apology completely
worthless.

> I've already proven you wrong on your assertion that I allegedly never say
> I am sorry or acknowledge an error. Done that in the last 24 hours. Still no
> apology from YOU for it...Just some lame "you really didn't mean it" claim.

The accusation was one of plagiarism, not which magazine it was
published in. Your "sincere" apology over the incorrect citation is
completely meaningless.

> Seems it was good enough for Hans, the aggrieved one in this case, to
> accept it.

He was in such shock that you actually apologized he almost missed
your insincerity. Then he said he was waiting for the rest of the
apology, (the part about plagiarism).

> It's just as well...If you HAD done it I'd be in ICU with a stroke at this
> very moment!
>
> Steve, K4YZ

If that's all it would take I'd lie and make an apology right now.
But you're the one lying, so your promise of a stroke will just have
to wait. Hi, hi!

>the seakeeping capabilities of his vessel and practiced good seamanship.

Gerry Spiess, a schoolteacher. The 3800 mile trip took 54 days in 1979.

Interesting list of similar trips (look behind the first window that opens):

http://www.famoussmallboats.com/locmntl/hotfreebies.html

Spiess wrote a book about his trip - "Alone Against The Atlantic"

http://www.amazon.com/exec/obidos/tg/detail/-/0425058441/102-9316516-62481
41?v=glance

I've gotta check the Radnor library. If they don't have it, a donation may be
in order....

But that's not the end of the story. In 1981, Gerry Spiess took "Yankee Girl"
to the Pacific, and successfully sailed from California to Australia.

How did he fit enough supplies for such a voyage in such a small boat? Doesn't
seem to be enough room, but he did it.

How big was his boat? Judge for yourself:

http://www.famoussmallboats.com/Graphics/speiss1c.jpg

Built of recycled plywood....

>The loss of the Titanic, crewed by PROFESSIONAL sailors, can be laid
>squarely at the feet at their obvious ignorance of the seakeeping
>capabilities of their vessel and poor seamanship.

My point exactly.

The chain of events is full of apparently "little" mistakes, any one of which would have changed the outcome completely.

It's made even worse by the fact that they were among the most experienced available, and many of them (including the captain) had experience with Titanic's sister ship, Olympic. So it wasn't even a matter of a new class of ship whose characteristics aren't fully known yet.

One doesn't attend the meetings of some of these clubs to see if that club would be for him. Someone will let him know if the club is for him and notify him only after it has been decided to invite him to join or not.
There's a certain Cincinnati area DX club which required DXCC and an invitation to join. The Southwest Ohio DX Association, on the other hand, doesn't restrict membership. Any guy with a 10m rig and a dipole can sign up.

The only "OBVIOUS" thing is that you jumped at yet another chance
to try and show off with a "witty retort".

What you did was run headlong into a brick wall of stupidity.

Again.

And as usual, got caught.

>And when I did, it was the most
> half-assed apology that I'd seen in a long time. Perfectly within
> character.

It wasn't YOUR apology to judge now, was it, Brain?

> So how's the QST search going? When does the second shoe drop?

No answers yet, Brain...I figger Tuesday or Wednesday should be
enough.

> Best of Luck.

For what?

BTW...don't worry about apologizing for haivng made yet another
stupid assertion that was disproved even before the keys stopped
clicking, Brain.

There's nothing in your conduct that even remotely demonstrates
that you have the STRENGTH of character to do the things you seem to
hold others to.

You're a loser, there's no way around it. As long as you continue
to lie to and about others, you always WILL be a loser.

Today is no exception.

Bilge.

The WTC towers were supposedly designed "back then" to withstand an
accidental hit by a wayward or disabled civilian B707 aircraft as a
result of an experience NYC had much earlier when a much smaller
aircraft bored into one of their skyscrapers.

http://www.architectureweek.com/2001/1031/culture_1-2.html

A big airliner is a big airliner, they all tote/toted tons of JP4/5
then and now, doesn't matter if it's being flown by an AAL 767 piloted
by a 15,000 hr. column jock or a hijacked 767 piloted by a sand roach.
They all burn equally well inside hi-rise buildings. If the building
comes down because it's core structure wasn't sufficiently
heat-resistant then in fairness who really did screw the moose?

"Over to you Hans".

This circle-jerk will churn well into the 22nd century long after the
circle-jerks of the Titanic have been completely lost . .

I apologized for that which I know to be wrong.

And so far, your assertion of what is "worthless" or not sincere
still don't stand since the person they were offered to DID think they
were worthy and sincere since he accepted them.

> > I've already proven you wrong on your assertion that I allegedly never say

> completely meaningless.

Completely meaningless to YOU, however you were not the intended
recipient, ergo YOUR definition of what is meaningless or insincere is
itself worthless.

> > Seems it was good enough for Hans, the aggrieved one in this case, to
> > accept it.
>
> He was in such shock that you actually apologized he almost missed

> If that's all it would take I'd lie and make an apology right now.
> But you're the one lying, so your promise of a stroke will just have
> to wait.

Well..you'e already half way there, Brain...You've already lied
today, some again in this post.

As for the stroke, I know you don't have the strength of
character to apologize even when the evidence is so overwhelmingly
against you...like the last 2 days, Brain.

Brian P. Burke is a documented liar without the strength of
character to admit an error or apologize for it.

Period.

Steve, K4YZ

By all means look up ND8V on QRZ. The reading is interesting to say the least.

Hi Leland, that is pretty crazy stuff. I still don't think ND8V is as
big of a Ham Radio Embarrassment than N8WWM is. I didn't see anything
about ND having a felony record or making the Rain Report for jamming
repeaters..N8WWM is one very sick individual who has a court ordered
shrink, and can't hold onto an ISP.

N8WWM DOUGLAS
ADAIR present in court. Indigency Hearing held. MARY S.
SWANSON appointed as counsel.
Matter called for Probation Violation Hearing. Pursuant to
the request of Defendant, matter rescheduled for Probation
Violation Hearing on Friday, December 1, 2000 at 8:30 a.m.
Bond is reset at Supervised Own Recognizance.
JUDGE JAMES D. JENSEN
PARTY : D1 - ADAIR DOUGLAS W
11/22/2000 1 Title : ORD:ATTORNEY APPOINTED

671-01526 issued by JTS (PROBATION VIOL - PROBATION CONTINUE
Dated December 1, 2000. Court Reporter SANDRA CORPE
ordered. State of Ohio: ANNE KIRKHOPE. MARY S. SWANSON
present on behalf of the defendant. Defendant, DOUGLAS
ADAIR present in court.
Defendant having admitted to a probation violation, and
having waived oral hearing, defendant is found in violation
of probation.
Defendant having been convicted of the offense of Nonsupport
of Dependents, in violation of Revised Code Section
2919.21(A)(2), a felony of the 4TH degree.

Probation as ordered by this Court on April 11, 1997 is
ordered continued with the following added conditions: 1)
Seek and maintain gainful employment; 2) Defendant to seek
mental health counseling; 3) Execute wage withholding
agreement.
Defendant ordered to pay the costs of prosecution including
any fees associated with the appointment of counsel. It is
further ordered that the defendant pay any supervision fees
associated with being granted probation. Payment of
financial obligations shall be prioritized as restitution,
supervision fees, court costs, fines, and assigned counsel
fees.

terminated unsuccesfully
PARTY : D1 - ADAIR DOUGLAS W

- ---

Or what about his abuse of the repeater system for which he was
spanked by the rain report?

N8WWM guilty of FCC violations. According to the FCC, N8WWM, Dog
Adair committed several violations over the air at the expense of the
Toledo Amateur Radio Club by utilizing their repeater to break the
law. The amateur club received a warning letter from the FCC
concerning Adair's violations and were told to take steps to make
certain the violations by Adair will not be repeated. Adair not only
hurt the entire image of amateur radio with his inexcusable behavior,
but damaged the reputation of yet another entity trying to further
the good of amateur radio. It's a shame when bad apples like these
make it so clubs can't even trust their own users to abide by the
rules they were sworn to uphold. Adair is also an infamous presence
on the internet. A google search of "N8WWM" reveals a peek into the
world of the individual identified as Adair. In addition to FCC
violations, Adair has, in the past, been accused of being a prolific
spammer, breaking several internet laws and violating several terms
of service agreements with internet providers.

Steve, I detect a note of green envy whenever I mention my DX operations. Get over it. And I presented the number of countries that I worked because you asked. As far as DXCC goes, I don't need the ARRL involved. I neither ask for "thier" approval nor endorsements. The DX is in my logs, and if the other station wants a card, all they have to do is QSL me through the buro. By the way, you're not in my /KH2 logs, so don't bother. And Jim's no longer the KH2 Buro manager, so don't try to wrangle one out of him either.

Finally, I am not responsible for your typo's. If I quote your typo, please be man enough to accept it for what it is, i.e., "...MMFAO!". You'll have to provide the "promounciation" of it for us. Hi, hi!

Best of luck!

Good grief, indeed.
```

So far the FACTS are that you have nothing to base YOUR assertions on,
have now spent three days making excuses for not apologizing for your OWN
errors, yet continue to chastise me for ones that weren't even directed to you.

Soooo...that still leaves you as a characterless, cajonesless liar.

What are you going to do to fix it?

Steve, K4YZ

>until QST is checked out.
>
>Am I wrong?

You ask a very narrowly defined question to which everyone, including me, already knows is no, you are not wrong on that ONE question.

But that's NOT the issue.

The PRESENT issue is whether YOU subscribe to your OWN rhetoric or not.

You stated I never acknowledge errors or offer apologies.

That statement was made HOURS after I had already done EXACTLY that and the person to whom it had been offered had accepted it.

YOU have since refused to acknowledge that YOU were wrong or offer an apology for YOUR errors.

That makes Brian P. Burke a lying coward.

Still.

Steve, K4YZ

Nothing is Steve's fault.

> > Does every inquiry about "CQ" magazine require a clarification from you?
>
> So...nursie still hasn't found the claimed "original story that is
> supposed to be plagiarized by Hans?

He's still waiting for an ARRL Staffer to do his legwork for him.
You'd think such a devout ARRL beleiver would have his own copies of
QST, or the searchable CD-ROMs. Maybe his mentor can help him out and
quit wasting my dues money in the process.

Good thing I paid my dues in full so that they could be used to fund
unnecessary searches for crank hams. Hi, hi!

Wonder how those searches through World Radio, the defunct "Ham Radio"
magazine, and Nuts&Volts is coming along?

Leave no stone unturned in the search to make Hans a liar and a creep.

> Too bad. It might have...for the first time in here...showed some
> truth about all those unfounded charges and epithets you level at
> others. It didn't.

I believe it did. It showed us that there is a long, long list of
unfounded charges and epithets that Steve has leveled at others, and
the list grows longer each day.

So far, all it has shown is your unstable emotional
> state and inability to get along with others in a newsgroup.

That was observable long, long ago. He merely reinforces that image
daily.

> > Guess this just kinda confirmed my suspicions about what kind of a creep
> >you really are, Hans.
>
> Tsk, tsk, tsk. Nursie's idea of an "apology." :-)

Indeed. Heartfelt sorrow.

> Must be her idea of what constitutes "civility." If she makes a mistake
> the tactic is to call others lots of nasty names to cover up her own
> errors...and then keeps saying she "apologizes." Tsk.

Because there are more than one inside Steve's shell. One rants and
raves, the other apologizes on the rarest of ocassions. It only
appears inconsistent to us outside of that shell.

> An example of modern American amateur radio highest-class

>Steve, I detect a note of green envy whenever I mention my DX
>operations. Get over it.

Get over WHAT, Brain?

Not a single bit of it is documented as having happened (that I am aware of).

No DXCC. No announcements in any of the journals. Nothing. Just your "word" and THAT has already been PROVEN to be dubious, at best.

>And I presented the number of countries
>that I worked because you asked.

I didn't ask you how many countries you worked, Brain. (Anyone remember a post from this scumbag in the last 24 hours "chastising" others for "twisting words"???)

The question was ""Of course YOU know this from your lofty position of number...WHAT, on the DXCC roll...?!?!"

You are not ON the DXCC roll, Brain...Not under ANY of the calls you have cited.

>As far as DXCC goes, I don't need the ARRL involved.

I am sure Dave Sumner is laying awake at night distraught that you won't send all those juicy "DX" QSL's in for verification.

>I neither ask for "thier" approval nor
>endorsements. The DX is in my logs, and if the other station wants a
>card, all they have to do is QSL me through the buro. By the way,
>you're not in my /KH2 logs, so don't bother. And Jim's no longer the
>KH2 Buro manager, so don't try to wrangle one out of him either.

No problem, Brain.

I have KH2 worked, confirmed AND annotated for DXCC.

BTW...I also worked KH2 >>FROM<< JR6...I missed being eligible for DXCC from JR6 by 12 countries...Oh well....

>Finally, I am not responsible for your typo's. If I quote your typo,
>please be man enough to accept it for what it is, i.e., "...MMFAO!".

What typo?

Here's the post AGAIN:

>> > > Please, Brain, P L E A S E give us all those juicy operating tips
>that
>> > > you've leared over the years that got YOU onto the DXCC Honor
>Roll...?!?!
>> > >
>> > > ROTMFFLMMFAO!
>> > >
>> > > Steve, K4YZ
>> >
>> > I don't have DXCC.
>>
>> Obviously. Pretty embarrassing, too, since you have allegedly
>> been in some ideal places to get it.
>>
>> >But I believe you when you say "...MMFOA."

Brain...

You B L I T H E R I N G I D I O T ! ! ! ! ! !

You could have saved face just by READING what was RIGHT IN FRONT OF YOU!

YOU requoted YOUR ERROR in your LAME attempt to "chastise" me over not being "responsible" for my typos!

THEN you try and cover it up by correcting it in a second post, hoping no one would see YOUR error!

And the ONLY person who can't see what a FOOL you are is YOU!

Sheeeeeesh!

Steve, K4YZ

>
>Nothing is Steve's fault.

True. He invents all kinds of "charges" then blames all others for
them! :-)

One of the strongest case syndromes of denial I've heard about.

That syndrome seems rampant among the code-tested extras in
here...along with the "599" signal reports. :-)

>> > Does every inquiry about "CQ" magazine require a clarification from

Tsk. "Steve and da boys" could have simply searched Google.
Hans has written the same story in this newsgroup before. Still
a good tale and good take on the Raddio Kopps with their big,
shiny shields in little wallets used to reinforce their holier-than-
everybody attitudes. :-)

>Leave no stone unturned in the search to make Hans a liar and a creep.

Tsk. Stevie done shot off his mouth/keyboard again, doesn't
have the full "licensure" to cure the wounds of his own causing.

Welp, the other (self-righteous) "role models for ham radio" are strangely silent on any sort of criticism. They must condone his actions of damning anyone who is against his opinions. Doesn't say much for those individuals...sure as hell doesn't present a good image of U.S. amateur radio to the rest of the country and neighbors.

Etymologists into common American idioms can tell us all that the term "handle" predates the first demonstrations of radio as a communications medium. That is, prior to 1896. Its use was widespread in the sun belt areas of the USA.

But, as the PA Raddio Kopps say (flashing their very important badges), the word "handle" is an evil despicable nasty word uttered by unspeakably bad "CBers" just to defame certain amateur radio extras.

Meanwhile, back to the "meaningful" discussions by the Architects and Master Mariners (of the landlocked kind) into the WTC, airliner handling, engineering safety, and navel maneuvers. All of which have enormous impact on amateur radio policy matters. :-)

hmmm, and then a few years later the 747 comes out. I don't know the
copmparisons between the two, but I suspect that the 747 has a lot more
mass, and a lot more fuel capacity.

I wonder what speed was calculated for also. The WTC planes were moving!

So what, Len? Much of what you talk about doesn't come close to amateur radio policy either.

> Well, except to some who wish to turn this newsgroup into
> a quasi-private Chat Room involving their own desires and
> preferences..and to have them damn all others for not thinking
> and feeling as they do. [yourself excluded]

That's a pretty good summation of what *you* want from this newsgroup, Len. After all, you're the one telling other people to "shut the hell up"..

> For the bleeding-heart imaginary sailors aboard, I won't cry
> great crocodile tears of a thousand-plus humans who perished
> on the Titanic in 1912. Nope.

"Bleeding-heart imaginary sailors"? Who would that be?

> I'll just reflect that the subject
> made a LOT of money for Linda Hamilton's ex-husband

You mean James Cameron? If so, why not just use his name?

You seem to have a serious problem calling people by their names. Perhaps you don't have the guts to do it.

Of course there was the PROFESSIONAL pilot who tried to roll a B-52 at low altitude.

> Not to worry. U.S. amateur radio regulations are Up To Date.

Yes, they are.

> They still require all amateurs to test for beloved morse code
> cognition capability in order to have priveleges of operating
> below 30 MHz...in the ham bands.

Why does that bother you so much?

> It seems that some amateurs
> bent on constantly re-living the past (in almost anything) think
> that morse code skill is still the epitome of "radio operation" in
> the year 2004.

Perhaps some do.

Many more think that a simple test of Morse code skill at a very basic level is a worthwhile requirement for an amateur license.

Why does that bother you so much, Len?

>Very "progressive." State of the Art.

Len, do you live in a "State Of The Art" house? Drive a "State Of The Art" car? Wear "State Of The Art" clothes?

Is your computer "State Of The Art", complete with broadband connection?

Heck, the only HF radio equipment you've admitted to owning is over 20 years old. Definitely not "State Of The Art", yet you lecture others about it.

Why? What's *your* problem?

Sure - back before the meaning of "handle" changed. btw, it may have been a bit longer than 60 years ago...

In those days, "handle" = "name". The above paragraph simply meant that hams didn't (and still don't) call each other by last names or titles. Which is definitely a Good Thing.

>I guess I'll continue to use the term 'handle" --- seems to have good
>roots.

No problem! I'll continue to use "name".

>> Why not just use plain English?
>
>Because the use of abbreviations and operating signals which permeated

>wonder WTF if I closed with "I appreciate the delightful conversation".

R R TU

In my field of work, the jargon can get to the point that ordinary people cannot follow the conversation, yet all the jargon terms exist because the equivalent plain English expressions are much longer and more complicated. That's true for a lot of ham slang ("shack", "rig", "QSL card", "73") but not for all.

In any event, an on-air lecture isn't the way to stop it.

At least in the club that the story describes, there's a world of difference between attending meetings and joining up. Going to meetings is one way to find out if the club is for you or not. Everyone was very nice to me when I went there, even thought I was an almost complete stranger. They didn't know my callsign or license class, either.

1094. OT: Hammond (haunted) castle

Newsgroup: rec.radio.amateur.policy
Date: 2004-10-24 19:35:16 UTC
From: lumushahs@aol.com
Message-ID: <20041024153516.22480.00001361@mb-m06.aol.com>
Source record: 98992

OT (Off Topic) post.

If you are near the North Shore MA area, you can see a Haunted Castle,
Sat Oct 30,2004 at 6:30 pm.

Hammond Castle
80 Hesperus Avenue
Gloucester, MA 01930
Phone: 978-283-2080 or 978-283-7673
website: http://www.hammondcastle.org/events.htm

One of the scariest Halloween attractions in Massachusetts, according to The Boston Globe, The Castle of the Damned terrifies hundreds of visitors every year with its very special, very spooky guided tour through Gloucester's Hammond Castle, which is alleged to be haunted.

John Hammond was one of America's premier inventors. His most important work was the development of remote control via radio waves, which earned him the title, "The Father of Remote Control."

In 1926 he started the construction of his medieval castle home in Gloucester, MA, as a bridal present for his wife, Irene. They moved into the castle in 1929 and opened it as a museum in 1930. During this period Hammond worked with assistants on his many inventions in his new castle laboratory.

Note: the Biographical information has been copied from the website.

Seems like an Engineer although he obtained a degree for Science, not Engineering. He started his own radio research company. Many of his inventions involved radio communications. He also invented the Hammond Organ.

The castle is haunted this Saturday. However, I don't know if the museum, displaying his inventions, would be open this Saturday.

I don't know if he was a "Ham" or not. No mention of Ham Radio in his Biography. Can he still be an "honorary" Ham? He obviously was an experimenter. However, I don't see any mention of hobby or social communications, so I would argue that he was not a Ham.

The Cincinnati area club, described below invited prospective members of
their choosing to attend a meeting. The invited attendee was "grilled"
a bit about his on-air activities, his DXCC status and his contesting
interest. I was invited to a meeting and determined within the first
fifteen minutes or so that I wasn't interested. This old, old club is
all but extinct now--a result of being too picky about who joined. The
old core membership simply died off.

> >There's a certain Cincinnati area DX club which required DXCC and an

> Yup. We have clubs like that around here, too.

There are few clubs hereabouts and none of them are DX/contest clubs.
It is a minimum 25 drive for me to attend even our country ARES
meetings. The nearest DX/contesting club is in Pittsburgh, an
hour-and-a-half away.
In the valley, those who chase DX are K8IP, N8NN, W8GBH and me. I'm not

nearly as active in contesting as in previous years. The idea of spending 44-45 hours of a 48 hour CQ WW doesn't appeal to me as much now as it did a decade or so back. I tend to do more single band entries. 160, 80 or 40m guarantees some sleep during the day. 10m at the current point in the solar cycle would allow me to sleep all night and be bored all day.

Hamfests with Hams communicating on Saturday night (anti social).
Small percentage of Hams, which are EEs, attend club meetings.
Morse code, antennas, and contests preferred over experimenting with radio or electronics.
Hams are generally overweight, older, and male.

Oh stop it Hans. The comments I made are completely apolitical and involved only a small band of purely technical issues. Specifically there appears to be a strong possibility that many lives might have been saved if the designers of the towers hadn't failed to take into account the damage burning A/C fuel would do to the survivability of the towers. Has absolutely nothing to do with who flew what into the towers for whatever reasons or reasons. It's about a design model of a collison between a A/C and the towers and nothing more.

But then again this is, after all, RRAP.

Not at all. Ocean liners aren't submarines. All that was needed were watertight
bulkheads that went one deck higher. But they didn't.

Sealing the compartments at the top would have involved all sorts of problems.
For example - what would you do for air intakes?

Look up a ship called the "Great Eastern" for an interesting view of what could
be done.

>I don't know how things were in this case, but sometimes allowing for
>all those possibilites means the thing isn't built.

PBS aired an excellent documentary on the towers a few months back. Went all the way back to the original concept and the Robert Moses dynasty that made it possible.

According to the documentary, both the design of the towers and even their very existence was controversial. Building them required the destruction of entire neighborhoods, including "Radio Row" on Cortlandt St. Much of New York City did not want them, because of the neighborhood destruction but also because there was no shortage of office space in Manhattan.

In fact, for years after the towers opened, they lost money due to low occupancy, even though the Port Authority and many New York State offices were moved there precisely to fill space.

Aircraft strikes were considered, and it was shown that the towers would stand. Fire is a different issue - remember that the offices were full of paper and other flammables.

Could *any* tall building withstand a strike by an airliner at full speed, and the resulting fire?

btw, one of the reasons so many firefighters were lost was due to their radios. They had new UHF trunked radios, which simply didn't work well when their repeaters failed in the towers. So when the decision was made to evacuate the towers completely, many firefighters did not get the word because their radios didn't work.

>> "Over to you Hans".
>>
>> This circle-jerk will churn well into the 22nd century long after the
>> circle-jerks of the Titanic have been completely lost . .
>
> Just make sure to clean up..... 8^)

Different thing entirely. Titanic was not an act of war; 9-11 was. Titanic's loss was entirely avoidable by such simple actions as binoculars for the lookouts and a bit less speed; the 9/11 attacks were much more complex to predict and avoid.

There were worse war-time losses of life at sea than Titanic, too.

>>>"Congressionally-mandated" is just another term for politicians pushing

I blame George Bush for NASA's troubles. He talks about incredibly expensive Buck-Rogers missions like going to Mars and back to the moon, yet does not push to keep programs like Hubble going, which will cost far less.

>The Cincinnati area club, described below invited prospective members of
>their choosing to attend a meeting. The invited attendee was "grilled"
>a bit about his on-air activities, his DXCC status and his contesting
>interest.

Understandable, to a point anyway. If the club is special-purpose, folks with a
different focus will almost certainly try to change the direction.

>I was invited to a meeting and determined within the first
>fifteen minutes or so that I wasn't interested. This old, old club is
>all but extinct now--a result of being too picky about who joined. The
>old core membership simply died off.

Understandable!

>> >There's a certain Cincinnati area DX club which required DXCC and an

>
>There are few clubs hereabouts and none of them are DX/contest clubs.
>It is a minimum 25 drive for me to attend even our country ARES
>meetings. The nearest DX/contesting club is in Pittsburgh, an
>hour-and-a-half away.
>In the valley, those who chase DX are K8IP, N8NN, W8GBH and me.

I've belonged to a few clubs in my 37 years, but recently time limitations are a big problem. It's not that I have no time, it's that the time comes in small bits at unpredictable or inconvenient times. Most clubs don't have meetings on weekdays at 5 AM, for example.

>I'm not
>nearly as active in contesting as in previous years. The idea of
>spending 44-45 hours of a 48 hour CQ WW doesn't appeal to me as much now
>as it did a decade or so back. I tend to do more single band entries.
>160, 80 or 40m guarantees some sleep during the day. 10m at the current
>point in the solar cycle would allow me to sleep all night and be bored
>all day.
>
I've always been domestic-contesting focused, for some reason. SS, Field Day, NA sprints, etc. Small potatoes to the serious contest folk in these parts, but much more do-able for those with moderate stations and time.

Two weekends to SS, btw. QRP with the K2 or low power with the Type 7? We'll see.

>
> Get over WHAT, Brain?

The jealosy. You have brought up before how I've operated from
locations that most hams would die for. I might add that there
actually was an element of danger in some of the locations.

> Not a single bit of it is documented as having happened (that I am aware
> of).
>
> No DXCC. No announcements in any of the journals. Nothing. Just your
> "word" and THAT has already been PROVEN to be dubious, at best.

Doesn't have to be. You just don't like it that I operated from those
rare locations.

> >And I presented the number of countries
> >that I worked because you asked.
>
> I didn't ask you how many countries you worked, Brain. (Anyone remember a
> post from this scumbag in the last 24 hours "chastising" others for "twisting

You'll need to show where you didn't reference the number of countries
worked.

> The question was ""Of course YOU know this from your lofty position of
> number...WHAT, on the DXCC roll...?!?!"
>
> You are not ON the DXCC roll, Brain...Not under ANY of the calls you have

Papers, I demand your papers! OK, Sgt Shultz.

> >As far as DXCC goes, I don't need the ARRL involved.
>
> I am sure Dave Sumner is laying awake at night distraught that you won't
> send all those juicy "DX" QSL's in for verification.

Let me reference Part 97 where it says that I must participate in DXCC
if I want to work DX or be DX.

Hi, hi! I hope you're holding your breath because it will be a long,
long time before I'm able to post something like that.

> >I neither ask for "thier" approval nor
> >endorsements. The DX is in my logs, and if the other station wants a

Apparently so. You demand to see my papers, my DXCC number, my shoe
size.

> I have KH2 worked, confirmed AND annotated for DXCC.

All bands, all modes?

> BTW...I also worked KH2 >>FROM<< JR6...I missed being eligible for DXCC
> from JR6 by 12 countries...Oh well....

Indeed. I believe you.

Nope, the quote is correct enough. Quitecorrect! You don't get to
slither out of it on a technicality. Hi, hi!

Maybe you'll explain to Rev. Jim the MMF part. I've notice that he's
been letting some stuff slide on through uncensored.

Best of Luck potty mouth.

The accusation was one of plagiarism, not which magazine it might have
been "stolen" from.

Thus, your heartfelt apology was a complete farce; a lie!

You are not to be trusted.

If you're speaking of the Johnson Motors who used to make outboard
motors for boats, the company is long, long defunct.

Many years ago they merged with Evinrude Motors and became Outboard
Marine Corporation (OMC).

OMC went bankrupt a few years ago, and was liquidated.

The brand names "Johnson" and "Evinrude" were acquired by Bombardier
(the Canadian company which makes Learjets).

I have heard no rumors that Bombardier is going into the motorcycle
business.

That anyone should chide another on OT posting here in rrap is mildly
amusing. When that someone is part of the Lennie/Steve/Brian-William
troika in *their* ongoing whizzing contest is much more amusing.

Random though mode on:

I have a 1987 Transciever. IC-745. Suits me just fine. All digital
(excluding the necessary analog bits)

Wow, even digital radios are getting old hat.

"Why", the Grinch said as a smile lit his face, "Maybe for everything,
everymode all has it's place."

I have a chunk of galena setting on the shelf in front of me - maybe
I'll make a cat's whisker detector and radio from it

Random thought mode off.....

I suspect it will have as much success as his papa's push to go to
Mars. Ain't gonna happen.

When we decide to go to Mars - and really mean it - is when we have
another Sputnik style embarrassment. I just hope that too many years of
infrastructure neglect won't render us not up to the task.

I really don't know what to make of the stuff I read about ND8V. I guess you
make your own opinion and go from there. It made for some interesting
reading for a few minutes anyway.

I haven't had a "long" call since February 1980!~

I never really cared for the 2 x 1 format a whole lot. I always
wanted a "K" call 1x2 or 1x3.

The "YZ" worked for me in two ways...first it sounds very
distinctive on CW, and secondly since one of the USMC units I was in
had the tail "modex" of "YZ".

I received a bunch of nice 160M QSL cards that were actaully
meant for "KC8MK", not my old call of "KC8M"...I've not received any
misdirected cards since I switched to K4YZ in 96.

Try a quartet. :-)

I'm not into any "whizzing contest" with the gunnery nurse. :-)

YOU are the one making that charge.

I just call them as everyone else can see them.

Or, as someone else wrote, "the replies just seem to write themselves!"

Heh heh heh.

>>> Well, except to some who wish to turn this newsgroup into
>>> a quasi-private Chat Room involving their own desires and
>>> preferences..and to have them damn all others for not thinking

>> After all, you're the one telling other people to "shut the hell up"..
>
> I've thought that Lenover21 wanted to be the moderator in here. He
>claims otherwise.

Tsk. Nice troll cast, but inaccurate.

Now YOU tell us what the Titanic's sinking of 92 years ago has to
do with amateur radio policy of today?

1912 was the year of the first U.S. radio regulating agency. That's
about the only "relation" to the subject of the Titanic and a very
tenuous one...if at all. :-)

>>> For the bleeding-heart imaginary sailors aboard, I won't cry
>>> great crocodile tears of a thousand-plus humans who perished
>>> on the Titanic in 1912. Nope.
>>
>> "Bleeding-heart imaginary sailors"? Who would that be?
>
> Yeah, what's with that?

Tsk. You two don't really READ what you've written? :-)

Jimmie wanted me to show ten kinds of respect and sorrow for all
the passengers and crew of the Titanic who perished in 1912!

>>> I'll just reflect that the subject
>>> made a LOT of money for Linda Hamilton's ex-husband
>>
>> You mean James Cameron? If so, why not just use his name?
>>
>> You seem to have a serious problem calling people by their names. Perhaps
you

>
> And is that on topic for rrap? ;^)

Tsk. More PCTA extra Double Standard.

> Linda is quite quirky in a cute sort of way... or is that quite cute in

>a quirky sort of way?

Why do you wish to continue talking about Linda Hamilton?

Does she have a ham license? [pun intended]

[just think what fun the ARRL news page would have with...<drum
roll>...HAM ACTOR! :-)

>
>>>>Boeing doesn't test fly
>>>>new aircraft with commercial paying passengers.
>>>
>>> Not many aircraft companies were busy working out Test
>>> Proceedures for test-flying new aircraft in 1912... :-)

How did Bill Boeing's company get into ham radio policy?

You guys just can't focus! :-)

>>> Boeing innovated the pre-flight checklist around 1940 or
>>> thereabouts after they lost a prototype Flying Fortress (and
>>> their chief test pilot) on takeoff.
>>
>> Of course there was the PROFESSIONAL pilot who tried to roll a B-52 at low
>> altitude.
>
> Did you see the case study of that one, Jim? Spooky! Too bad so many of

>the folk flying with him knew they were probably going to die some day
>with him at the yoke.

So...this is now a FLYING newsgroup?

Or are you PCTAs just "high?"

>>> Not to worry. U.S. amateur radio regulations are Up To Date.
>>
>> Yes, they are.
>
> Seems like it to me!

For maybe, 1913... :-)

>>> They still require all amateurs to test for beloved morse code
>>> cognition capability in order to have priveleges of operating
>>> below 30 MHz...in the ham bands.
>>
>> Why does that bother you so much?

Tsk. Doesn't bother me much. I haven't gotten an amateur radio
license yet. :-)

Why should I sell my soul for some high-rate morsemanship? :-)

>>> It seems that some amateurs
>>> bent on constantly re-living the past (in almost anything) think
>>> that morse code skill is still the epitome of "radio operation" in
>>> the year 2004.
>>
>> Perhaps some do.

Jimmie Who do.

>> Many more think that a simple test of Morse code skill at a very basic
>> level is a worthwhile requirement for an amateur license.

Only because THEY had to do it...therefore everyone else has to
do the same! :-)

>> Why does that bother you so much, Len?

Why is Jimmie so bothered that he has to keep asking that?

>>>Very "progressive." State of the Art.
>>
>> Len, do you live in a "State Of The Art" house? Drive a "State Of The Art"
car?
>> Wear "State Of The Art" clothes?
>>
>> Is your computer "State Of The Art", complete with broadband connection?

Far more modern in all respects on all items compared to 1912. :-)

> If we owns PC's, we isn't state of the art.

Tsk. Bad grammar to boot...up.

Try "If we own PCs, we are not state of the art." :-)

Your English syntax and grammar is NOT state of the art...

>> Heck, the only HF radio equipment you've admitted to owning is over 20 years
>> old. Definitely not "State Of The Art", yet you lecture others about it.

Tsk. Jimmie have loss of memory. Poor fella. Has to "recycle" all his
radio construction in order to do "state of the art" TUBE designs in the
1990s. Tsk. With a double degree... :-)

>Random though mode on:
>
> I have a 1987 Transciever. IC-745. Suits me just fine. All digital

If you really care about this, I will ask the ones I see on 10/30 if I may list
their names (and callsigns).... I will only ask those who don't read this
group (those who do may post on their own).

Apparently you don't understand what constitutes accounting fraud. Why don't
you ask a professional auditor (other than myself).

You really think it would be that big a story? I doubt it would be. No one
really cares about amateur radio anymore - other than the self-important ARRL -
and that's really too bad.

> You know, of course, that these posts you make here regarding Bill

Just because I am the only one to realize what he may be doing (*), that doesn't mean that I am wrong. It only means that I may be the only person here with the correct skill-set to recognize his activity for what it really is.

(*) - Note that I didn't say "what he is doing" - because even I recognize that it still needs to be proven. However, no one here has been able to offer any proof that what his activity appears to be is really something else.

BTW, if you all don't think that BP's weekly posts here are spam, then why:
1) Is it still against the newsgroup charter to have periodic posts in the ".policy" group? (Remember that he also posts to ".misc" - but the charter and guidelines ALLOW that.)
2) Why is BP now posting it also on "alt.ham-radio.mods"? He is EXPANDING his spamming.

An obvious lie since the text of his weekly report IS being posted here and has
been for the past 2 years, practically without fail. It is being posted
through AOL using newsline's AOL mailbox account as the validated user doing
the posting. ARN's own web site (at page /nlinfo/nlstory.html) establishes
that they use AOL for mail.

Note also that their web pages regarding "What is Newsline" and "Supporting Newsline" make no mention of ANY operation other than amateur radio news gathering and dissemination and claim that this SOLE activity of the organization costs $1,000/month. My proof is THEIR OWN STATEMENT. They are burying the costs of their scholarship program by calling it news gathering.

There's your proof. It's ARN's OWN STATEMENTS. The fraud is that they are solciting donations from the public ONLY for "news gathering" expenses and DIVERTING that to the scholarship with no indication that they perform any function other than news gathering. Solicitation based on a false premise is fraud. QED.

It does not matter that the solicited purpose and the diverted purpose are both which are described as charitable in Internal Revenue Code (26 U.S.C) section 501(c)(3). It is the diversion without any indication in the solicitation for the funds which is the problem.

> > > > > > So far, you've produced exactly SQUAT.

And to a deaf person, it matters not how much is said as he cannot listen.

Brian, we gotta go with Hans on this!

One has to assume that a professional pilot would have, realising his error, made every effort to avoid the Towers. The camel fornicators jammed on the power and aimed straight for the buildings...That's a heck of a lot more kinetic energy than a glancing blow or just clipping it with a wing (a loss of the aircraft, to be sure, but a lot less likely to have caused the Towers to fall...)

A lie?

Hardly.

Bill states, and it is KNOWN as fact that others are involved with the
production and distribution of ARN.

If you were "involved" in anything more than character assassination, you
MIGHT know this...

>It is being posted
>through AOL using newsline's AOL mailbox account as the validated user doing
>the posting. ARN's own web site (at page /nlinfo/nlstory.html) establishes

OK...And this proves that Bill Pasternak is actually the one "sending"
it...HOW...???

>Note also that their web pages regarding "What is Newsline" and "Supporting
>Newsline" make no mention of ANY operation other than amateur radio news
>gathering and dissemination and claim that this SOLE activity of the

The only thing about to get "buried" here, Dieter, is your reputation.

Have fun in court.

"YOUR HONOR! YOUR HONOR! Bill Pasternak is raising money to help put
teenagers into science based college education programs and I DEMAND YOU MAKE
HIM STOP!"

Go ahead, Dieter...Make my century!

>There's your proof. It's ARN's OWN STATEMENTS. The fraud is that they are

ARN provides it's scholarship and "Young Ham Of The Year" award in open
forum.

You're welcome to show how ARN is committing "fraud" when everyone knows
they provide these scholarships

>It does not matter that the solicited purpose and the diverted purpose are

I can be deaf as a doorpost and it wouldn't matter, Dieter, because I can
READ!

What I READ is YOUR attacks and slanderous innuendo against Bill
Pasternak, and your manifestation of your hatred in ARN.

So far...NO PROOF.

But if you LIKE being publically humiliated, BE MY GUEST! I can use the
laughs!

Of course, Len. That's what I wrote:

" "Handle" used to simply mean "name", and it wasn't even strictly a piece of ham jargon. "

> But, as the PA Raddio Kopps say (flashing their very important
> badges), the word "handle" is an evil despicable nasty word
> uttered by unspeakably bad "CBers" just to defame certain
> amateur radio extras.

Where do you come up with that, Len?

Meanings of words can change over time. cb folks changed the meaning of "handle" when applied to identification of a person. Rather than simply meaning "name", they changed it to mean "a made-up name to avoid using call letters or other means of positive identification".

"Handles", on cb, were and are used in an attempt to *avoid positive identification* by others, particularly the FCC.

That's not something any radio amateur should do. It's a bad thing.

The use of "handles" by cb folks for the purpose of evading positive detection dates back years before FCC stopped issuing licenses and call letters for cb users. In fact, one of the reasons (not the only one) FCC gave up on cb licensing was that few cb users were using call signs.

cb folks started using the terms "personal" and "first personal" to mean "name" and "first name" in part because the meaning of "handle" had changed.

All of that is plain, simple fact. Hard for you to take, though. Too bad!

10-4, good buddy? What's *your* handle, Len? How many Bird watts does your radidio dead key?

Perhaps your love of "handles" is why you can't seem to call people by their names...

> Meanwhile, back to the "meaningful" discussions by the Architects
> and Master Mariners (of the landlocked kind) into the WTC,
> airliner handling, engineering safety, and navel maneuvers. All of
> which have enormous impact on amateur radio policy matters. :-)

They have more impact and relevance than your oft-repeated stories of watching teletypes at ADA 24/7, or your claim to fame of writing for a defunct magazine.

>>I<< care about Amateur Radio, Stussy, and the black eye that
self-serving social ner-do-well's such as yourself will do to it.

The tit-for-tat goings on in here notwithstanding, you're going to
take a perfecetly reputable organization that does wonderful things
for Amateur Radio and TRASH it in the legal system because of your
selfish, self-serving rant against Bill Pasternak.

You think you've found some legal "loophole" through which you
can extract your vengence for whatever injustice you think Bill has
perpetrated against you.

What you're GOING to do is bog down an already overburdended
legal system with yet another petty and trivial lawsuit that will, in
all likelyhood, just cause you MORE frustration and damage an
organization that proactively promotes Amateur Radio to our youth.

That's pretty selfish. It serves no purpose.

> > You know, of course, that these posts you make here regarding Bill

> fall...)

There are three major airports within a few miles from lower
Manhattan, Newark, JFK and Laguardia. Most aircraft accidents occur
during landings and takeoffs and include both pilot error and
equipment failures and sometimes both. With the balls to the wall
looking for altitude. The guy who hit the Empire State Building was
executing extreme evasive maneuvers with a high-performance military
A/C which was far more agile than any jet airliner but he hit it
anyway and almost dead center at that. As you well know there have
been situations in which airliners have become completely

uncontrollable, e.g., 737 rudder lockups. You're a pilot too, connect the dots.

The issue "under discussion" here is whether one of the towers might not have come down if it's designers had used their heads when they picked a wayward 707 as the model for a A/C collision with a tower and factored in the fact that 707's carry huge amounts of JP. Which they apparently didn't do. That's *all* there is to my "agenda". But as usual around here the "technical experts" . . yadda, yadda . . .

Charge is such a nasty legalese sounding term. It's more like
"observation". And yes, I do make that observation.

> I just call them as everyone else can see them.

Wouldn't it be better to shed light on what others may not be able to see?

I took the tests recently, all within the past 5 years, and a couple
within 3 years. They are up to date enough, covering satellite ops, all
manner of relevant band and technical questions dealing with present day
equipment. They are up to date for at least mid 2001.

Ahh, maybe there is the problem. You don't have to sell your soul, just
study the material. I had great difficulty with Element 1 preparation,
but it didn't do me a bit of damage. Here I am, soul intact , and just
as fat dumb and happy as ever! 8^)

Yup, kind of illustrating the point that many people seem to think that
they are some kind of high tech wizard because they own a PC or cell
phone, or other such icons.

> Try "If we own PCs, we are not state of the art." :-)

Thanks for the suggestion, but I kind of like the other way if you
don't mind. 8^)

Despite their virtual obsolescence, hollow state technology is quite
interesting, at least to me.

AM never really appealed to me. Takes a lot of energy for all you get
out of it. But I do like historical processes and equipment as a
diversion after working all day with much more modern techniques. Kinda fun.

> Wow! "State of the Art!"

I suppose at one time it was!

> Amaze your friends and neighbors by being able to talk without wires

Hehe, AM is probably just about at the bottom of the heap (with
apologies to all the AM'ers out there)

> Have a Happy, your Grinchness...

You also, Lenover21.

> LenAnderson@ieee.org

I do have a question. I had called you Lennie once, and I think you
didn't particularly care for that. I've been calling you Lenover21, but
that sounds kind of formal if a screen name can be called formal.

Do you have a preference? Does simply "Len" work? Or "Leonard"?

Cross-posted to: rec.radio.amateur.misc,rec.radio.amateur.policy

I worked a guy in West Virginia who tole me he got a
Masters Degree in engineering by taking correspondence
courses from DeVry. I dont see how that is possible.
Then I ask the same guy some questions about RMS
voltage and negative SWR and he didnt know a thing about
either. What he did tell me about negative SWR and RMS
voltage was all wrong. I wonder if I should take DeVry
correspondence courses? This guy in West Virginia sounds
like a nut. Every time I ask him a question, he would
reply with a stream of filthy curse words. It sounded like he
needs some lithium, maybe he ran out.

73,

Lloyd

Lennie does love to make those "tough sounding" accusations, then
chastises anyone who dares to do the same.

>> I just call them as everyone else can see them.
>
> Wouldn't it be better to shed light on what others may not be able to
see?

When you're already in the dark without a clue as to where the light
switch is, the best you can do is fumble around and hope to hit it sooner or
later...

Lennie's DEFINITELY in the "...or later" stage.

>> Now YOU tell us what the Titanic's sinking of 92 years ago has to
>> do with amateur radio policy of today?
>
> Very very little.

Actually, quite a bit.

It was the need to have a "universal" communications medium that has drive
the Morse Code issue for all these decades.

Of course Lennie KNOWS that, has stated it himself...Re-stating it would
ruined the rant effect.

>> Jimmie wanted me to show ten kinds of respect and sorrow for all
>> the passengers and crew of the Titanic who perished in 1912!
>
> When one would have been sufficient. Respect doesn't make a person a

>"bleeding heart".

Of course Lennie has no respect or sorrow for those people.

How can you respect anyone else when you have no SELF respect?

>> Why do you wish to continue talking about Linda Hamilton?
>
> Well you brought her to the conversation. 8^)

Who wouldn't...Unless, of course, your "preferences" of the "alternative lifestyle" mode...?

>> So...this is now a FLYING newsgroup?
>
>No, but there are some on Netnews, I'm sure.

It's only a "FLYING" newsgroup when Lennie wants to discuss his student pilot days in 1950-something.

And it's a "MILITARY COMMUNICATIONS" newsgroup when Lennie wants to discuss 1950's-era Army RTTY or 1980's era "SINCGARS" radio.

It's also a MODEL AIRPLANE newsgroup when he wants to parallel the AMA with the ARRL.

And it's a "MENTAL HEALTH" newsgroup when Lennie wants to make allegations about other's "meds" or how "crazy" they are.

In short, it can be ANY KIND of newsgroup that Lennie wants WHEN Lennie wants, but WOE BE to the Licensed Amateur who dares to deviate from Lennie's topic-du-jour.

>> Why should I sell my soul for some high-rate morsemanship?

Why do you consider me a newbie?? I've been licensed for over 14 years with
over 13 years as an extra. That certainly takes me out of the newbie class.

1148. K1MAN MOLESTS BOY SCOUTS

Newsgroup: rec.radio.amateur.policy
Date: 2004-10-25 21:02:02 UTC
From: Anonymous <mix@itys.net>
Message-ID: <5c2176ad5f3419626ea601ee08c45909@itys.net>
Source record: 99096

Glenn Baxter has left
a bitter taste in the mouths
of at least 60-80 Boy Scouts,
this reporter has learned.

ANALs Jennifer Haggis reports:

Glenn Baxter poked the Boy Scouts
with his big stick
(a Collins KWS-1) last Saturday
night, according to ear-witnesses
on 3.890 MHz.

"Baxter left a bad taste in the
mouths of all those boys," said
Barry OKeefe of Troop 69.

"He seemed to enjoy Jamming the Boys.
We have witnesses who heard him
laughing about it!"

Michael Powell of the FCC was
flabbergasted. "You mean he ENJOYs
jamming scouts?" He asked.

"Baxter has molested these scouts on
the air, and Im pretty pissed about
it" said David Summers, President of the ANAL.

The questions reverberating through
Hamdom are these:

Why did Baxter molest the Boy Scouts?

Why did he enjoy leaving a bad taste in their mouths?

Why didnt he listen to their
complaints as he ruthlessly jammed
the scouts?

Finally, who impregnated Gail Fisk Malone?

Listen to the K1MAN bulletin as
our correspondents ask the "tough"
questions regarding Glenn Baxters recent molestion of these fine youngsters.

Hello, gang

Just a quick note:
The inventor of the Hammond organ was Laurens Hammond. He was a clock maker. Having had a number of Hammonds (A-100, B-3, M-3, T, X-66, X-77, and many more), I am fairly secure in that fact ;)

Hey, gang, let's all make the Titanic disaster of 1912 the
principle topic of this newsgroup!!!

Hey, gang, let's all play like civil engineers and architects
to indict the designers of the WTC!!!

Hey, gang, let's all be Pilots In Command and talk all about
flying!!!

Hey, gang, let's all make sure Jimmie Who gets all that praise
and respect for vacuum tube kluges which are State of the Art!!!

All of which is vastly important to the few regulars in here who
can't figure out how to start their own private Internet chat room
so that they can all call the NCTAs nasty names behind their
backs and be King of the Ham Hill!

bwahahahahah <small snicker in place of "hi hi">

Jim, our Artist of the State. It wasn't Kellie. It wasn't Hans. It
wasn't Dieter. It wasn't Jim Hampton. It wasn't Dee. It wasn't Kim.
OK, that about exhausts the regulars in here. :-)

>> Now YOU tell us what the Titanic's sinking of 92 years ago has to
>> do with amateur radio policy of today?
>
> Very very little.

Actually, NONE.

However, the Titanic disaster is a favorite subject of his lordship,
Sir James. As Lord High Admiral of the newsgroup (sailing these
turbid waters every day), he has decreed the Titanic disaster IS a
worthy subject for amateur radio policy.

There we have it.

> When one would have been sufficient. Respect doesn't make a person a
>"bleeding heart".

True enough. But only in the literal sense.

>> How did Bill Boeing's company get into ham radio policy?
>>
>> You guys just can't focus! :-)
>

> Not a matter of focus. Just some discussion among friends. And the
>discussions among friends tend to go where they will.

So...you've joined the Society of Friends?

We quake at the thought...

But, of curse, you regulars all OWN this newsgroup. Despite it going wherever the Internet carries it. What you dictate as Right and Proper MUST be observed at all times!

>> Or are you PCTAs just "high?"
>
> Ick, getting high is a sure fire method of wasting one's life.

I'm "high" on life itself. No drugs or substances needed.

Nor any morse code fantasies as the epitome of hobby radio arts.

:-)

> I took the tests recently, all within the past 5 years, and a couple
>within 3 years. They are up to date enough, covering satellite ops, all
>manner of relevant band and technical questions dealing with present day
>equipment. They are up to date for at least mid 2001.

You missed my point on that.

The present-day U.S. amateur regulations are just fine and dandy to those who want to keep the morse code test for a license examination.

Other than to this circle of "friends," somewhere in the neighborhood of 700 thousand (give or take) licensed amateurs MIGHT have some disagreement with that "up to date."

There are presently 18 ("count 'em, 18") petitions for consideration on changes to U.S. amateur radio regulations made public by the FCC. It should be obvious (except to the oblivious) that all is NOT "up to date" in those regulations.

> Ahh, maybe there is the problem. You don't have to sell your soul, just

>study the material.

Why? :-)

I'm really only interested in ending the U.S. amateur radio license exam morse code test.

I do NOT need to "study material on morsemanship" to do that.

I do NOT need to "study material on any other test element" just to get a federal merit badge saying I am "authorized" something or other. You seem to forget that I was ON HF very legally and correctly over a half century ago, over four decades ago, over three

decades ago, and even earlier this year...all without having ANY
requirement to "study morsemanship material."

>I had great difficulty with Element 1 preparation,
>but it didn't do me a bit of damage.

I always study for my blood tests. So far I've passed every time.

>> LenAnderson@ieee.org
>
> I do have a question. I had called you Lennie once, and I think you
>didn't particularly care for that. I've been calling you Lenover21, but
>that sounds kind of formal if a screen name can be called formal.

What do you see on my "signature" line?

Tsk. If you can't understand my preferences, then that trip to an
opthalmologist for you is necessary. [remember, watch out for
presbyopia...]

If you pick up an IEEE Membership Directory, you wil see my legal
name in there. Been in there since 1973. That's the formal version.

Or you can call me any name, nasty or otherwise, that you care to
use. Even enclose it in quote marks as "Dave" does it. Just don't
call me late for dinner.

Shirley you jest. Roger that. Go to the John. Etc.

LenAnderson@ieee.org

Tsk.

I say enjoy the hobby. I say don't try to force archaic, imaginary
needs in testing for an amateur radio license just because some
olde-tymers had to do it. I say enjoy freedom. I say try to keep
up with the technology. I say the technology isn't restricted solely
to what the ARRL publishes.

Is that "bad mentality?" Or would you rather everyone be subject
to rule by the raddio kopps carrying dazzling bright kopp badges?
[that way you could get to push around others who don't agree
with you and your opinions - which you call "facts"]

Do I do "OT posting more than anybody?" No.

If I DO talk about old time (OT) subjects it is for a reason of
explanation since I've DONE those things and have first-hand
experience. I don't need "confirmation" from any "league"
organization to "document" it. :-)

M'lord Hamme, what is the "significance" of discussing the Titanic disaster
at all in an amateur radio policy newsgroup?

Shouldn't you be taking that up before the House of Lords?

>>Linda is quite quirky in a cute sort of way... or is that quite cute in
>>a quirky sort of way?
>
>Very attractive, really. Not at the Jan Smithers level, of course.

Tsk. Letting all your sexual fantasies hang out in public again?

What possible significance has YOUR sexual fantasies to do with
amateur radio policy matters?

Oh, yes, you like to present them to show your "manliness?"

Weird.

>>>>>Boeing doesn't test fly
>>>>>new aircraft with commercial paying passengers.
>
>OT?

Commercial air carriers don't concern themselves with amateur
radios...requiring ANY RF radiation source to be turned off when
in-flight.

Again, that and mention of Boeing Aircraft Company is NOT an
amateur radio policy subject.

>>>> Not many aircraft companies were busy working out Test
>>>> Proceedures for test-flying new aircraft in 1912... :-)
>
>Very OT

So is claims that vacuum tube kluges you've "designed" in
the 1990s as "state of the art." :-)

>>>> Boeing innovated the pre-flight checklist around 1940 or
>>>> thereabouts after they lost a prototype Flying Fortress (and
>>>> their chief test pilot) on takeoff.
>
>Yawningly OT

So is Rev. Jimmie's regular "subject" of the Titanic disaster in
here.

Jimmie have fantasies of being a "hero" saving lives through
moursemanship in that disaster scenario?

>>> Of course there was the PROFESSIONAL pilot who tried to roll a B-52 at low
>>> altitude.
>>
>>Did you see the case study of that one, Jim? Spooky! Too bad so many of
>>the folk flying with him knew they were probably going to die some day
>>with him at the yoke.
>
>Did you see the film clip? It's on the 'net at a few sites. Not the best
>quality, but scary enough.

Has Jimmie actually RIDDEN in a B-52?

Who cares? Jimmie never served his country in a military capacity,
wouldn't have any need to ride a B-52 for any reason.

>>>> Not to worry. U.S. amateur radio regulations are Up To Date.
>
>>>> Yes, they are.
>>
>>Seems like it to me!

"Yawningly OT." Hi hi. :-)

The morsemanship test REMAINS and that suits Mr. "I serve my
country in OTHER ways" Miccolis, the artist of the state, just
dandy. That will secure U.S. amateur radio for morse-tested hams
and assure Jimmie someone to play with...

>>>> They still require all amateurs to test for beloved morse code
>>>> cognition capability in order to have priveleges of operating
>>>> below 30 MHz...in the ham bands.
>
>>> Why does that bother you so much?
>
>Notice how Len avoids the relevant questions...

What is the "relevant question?" :-)

Oh, I see. You be da Lord Hamme-on-wry, de Lawgiver of what
be relevant for all to follow! Beggin' me humble pardon, m'lord.

>>>> It seems that some amateurs
>>>> bent on constantly re-living the past (in almost anything) think

Tsk, tsk. Still have raw nerve endings at not being praised and
revered for "recycling" all those radio parts shown in the
single home page picture. :-)

The word "ham" is still not the best of "respectable" nicknames.
You would be in difficulty saying an actor is a ham. :-)

>> But, as the PA Raddio Kopps say (flashing their very important
>> badges), the word "handle" is an evil despicable nasty word
>> uttered by unspeakably bad "CBers" just to defame certain
>> amateur radio extras.
>
>Where do you come up with that, Len?

In newsgroups, on the Internet, in personal communications with
PCTA masters-of-radio...just to name a few hundred sources. :-)

>Meanings of words can change over time. cb folks changed the meaning of
>"handle" when applied to identification of a person. Rather than simply
meaning
>"name", they changed it to mean "a made-up name to avoid using call letters or
>other means of positive identification".

Well, there we have it. The judgement from Nuremberg (or someplace).

Tsk. Trying to lay blame on the "cb folks."

Why do you have a problem with CB?

>"Handles", on cb, were and are used in an attempt to *avoid positive
>identification* by others, particularly the FCC.

Oh? You have personal experience with that? :-)

>That's not something any radio amateur should do. It's a bad thing.

Tsk. Vile, contemptible, dastardly sort of bad thing? :-)

Run right out to the FCC with your reports on evil, wicked, mean
and nasty CBers not giving their proper, official call letters! :-)

>The use of "handles" by cb folks for the purpose of evading positive detection
>dates back years before FCC stopped issuing licenses and call letters for cb
>users. In fact, one of the reasons (not the only one) FCC gave up on cb
>licensing was that few cb users were using call signs.

Well, there we have it...again.

The "insiders" information on Why The FCC Does Things!

It's no wonder you get upset when someone calls Mikey Powell for
"Mikey." It's hard to suck up to the boss when you get razzed for
it?

So, what did YOU DO about making CB all right and amateur-
proper? Nothing? Tsk.

Class D Citizens Band has been in existance since 1958. That's
a long time. [I was working at Ramo-Wooldridge Corporation when
that happened...were you working anyplace?] Shirley, with all that
"insider" information on the Commission, you MUST have some
influence with them to correct
their actions, right?

>cb folks started using the terms "personal" and "first personal" to mean
"name"
>and "first name" in part because the meaning of "handle" had changed.

"Hi hi" and a "'73," copy your op-ed "599" OM. :-)

>All of that is plain, simple fact. Hard for you to take, though. Too bad!

NOT "fact," Jimmie. Just your OPINION.

Try to understand you and your opinions are NOT the center of the
universe.

>10-4, good buddy? What's *your* handle, Len? How many Bird watts does your
>radidio dead key?

I don't have a "radidio." Explain what that is supposed to be.

"Ten" codes were devised by the nation's police forces, not by
CBers. You have a problem with the police forces? Tsk.

I have a NAME and use it, on or off any communications device.

My briefcase has a handle, my suitcases have handles, all our
doors at home have handles, many of the kitchen implements have
handles (knives, pans, pots, etc.), we have all sorts of drawers and
cabinets with handles. Even my despised (in the PCTA's view)
Icom R-70 has one handle!

Sunnuvagun! :-)

All you have is an amateur callsign and use it like a name. That's
not good for you in court when some police force makes you appear
there. You are federally authorized to transmit RF energy, but ONLY
in amateur radio bands and ONLY within their technical limits.

A Bird manufactured wattmeter is a good dummy load with a meter
(reasonably accurate) measuring the power dissipated in that load.
I first used one in commercial work sometimes in the 1960s. WREX-
TV had a huge one beside the video and aural transmitters when I
worked there in 1956 but the station didn't have to use it as a dummy
load to test the transmitters. What did you use in 1956?

>Perhaps your love of "handles" is why you can't seem to call people by their
>names...

Perhaps you are losing your sanity, going around imagining what
others think and do. Tsk. We already have one confirmed nutso
in this newsgroup. Another one (another PCTA) won't make much
difference.

> Meanwhile, back to the "meaningful" discussions by the Architects
>> and Master Mariners (of the landlocked kind) into the WTC,
>> airliner handling, engineering safety, and navel maneuvers. All of
>> which have enormous impact on amateur radio policy matters. :-)
>

>They have more impact and relevance than your oft-repeated stories of watching
>teletypes at ADA 24/7, or your claim to fame of writing for a defunct
magazine.

What "oft-repeated stories of watching teletypes," Rev. Jim?

Army station ADA had teletype loops linking transmitters, receivers,
and the control. Only three loops and three separate circuits as
order wires (where all the commands are given, advisories noted).
That makes only three to "watch" (one can hear them start up from
their normal idle state). One had better "watch" those...or face
disciplinary action at a military station.

Oh, but you've never served your country in the military, have you?
No, you serve your country "in other ways." None of which have
been named. [you exist therefore that alone is "serving this
country?"]

Rev. Jim, don't take it so hard in trying to write your next sermon.
Not all of us can be as lucky as I and get exposed to REAL HF
communications done around the clock, every day of each year.
But, you never did ANY of that so you show your spite by insulting
those of us few who did real service. Tsk.

Now you want to toss snit on Ham Radio Magazine? Again?

Jim Fisk and Skip Tenney (editor in chief and publisher, respectively)
started HR as an independent amateur radio periodical. What they
started kept on going for 22 years. [Jim Fisk died suddenly of a
heart attack before the 22 years were completed] Communications
Technology, Inc., did not have the benefit of a budget umbrella and
life preserver from any membership organization...they did it by
themselves. Their reputation as a source of technical information
for radio amateurs was recognized around the world. Still is.

Did you write articles for HR? No, you didn't. Were you on the HR
masthead (the column next to the TOC showing the names of the
staff)? No, you were not. You did neither. I did both.

I don't "claim any fame" from what was minimum-wage work for HR.
It was FUN work in a field I was, and still am, in...that of radio and
electronics. In fact, I don't claim ANY "fame" in anything. I've done
my career well in a work that I chose because it was interesting to
me, still do my hobbies in that for the same reason.

What I've said I've done was actually done. There's even
"documented" proof available that I did. :-) I don't hang in a news-
group every day as you do, speaking out on all kinds of subjects
that: (1) Don't concern amateur radio in any way; (2) Are not from
your work experience; (3) Are presented as "facts" because they
are personal preferences and opinions instead of facts. You've
done all three of those in one message. :-) Good job...but way
out of place.

>
They almost did! But Adolf managed to snatch defeat from the jaws of victory by such dumb moves as dividing his invasion force and exterminating rather than befriending the Ukranians.

The high point of German occupation of the USSR came just before Pearl Harbor. Then they started being pushed back. Had Stalin lost, the western alliance would have had the job of defeating a Germany that had USSR's resources behind it, and no second front.

Scary

It's not being sensitive about being told. It's just that those doing
the telling are some of the worst offenders, i.e., PCTA double
standard.

Yes, you DARE say it, Sir Putzy Jr!.

I have never chastised Sir Scumbag about being "off topic" except when HE
is chastizing others for doing exactly the same thing HE does.

> http://news.yahoo.com/news?tmpl=story&u=/ap/20041025/ap_on_re_eu/russia_us_election

Mike, interesting left-wing twist on an otherwise off-topic non-event.
Thanks for posting it.

But since it is up for discussion, you'll find something closer to the
truth buried way down in paragraph five, where Russia's most recent
terrorist attack wasn't a wayback when three (3) years ago. How
quickly our AP reporters forget.

And FWIW, Putin doesn't get a vote, and couldn't care less about what
we think of "thier" human rights. Ditto China and Sudan.

bb

MOSCOW - Russia's political elite has been showing a striking
willingness to take sides in the U.S. election ï¿½ most notably
President Vladimir Putin (news - web sites), whose expression of
support for President Bush (news - web sites) reflects more than the
two leaders' warm relationship.

AP Photo

Analysts say it stems from a deep distrust of U.S. Democrats, dating
back to Jimmy Carter's focus on human rights violations in the Soviet
Union, and a Kremlin calculation that John Kerry (news - web sites)
would be tougher on Putin.

Many Russians, including the current team in the Kremlin, have a
lingering bad taste from what they perceived as the Clinton
administration's intense involvement in Russia's political and
economic life. Some saw it as a factor in the rampant corruption that
afflicted Russia under Boris Yeltsin and the economic collapse of
1998.

"The Russian leadership very much wants Bush to win," said Fyodor
Lukyanov, editor of a leading foreign affairs journal here. The
Kremlin, he said, fears a Kerry administration would pursue "a policy
of active participation in Russia's internal affairs."

Putin, who last year lambasted Bush for attacking Iraq (news - web
sites), all but endorsed him outright last week, saying international
terrorists will celebrate a victory if he loses.

I don't care WHERE you CLAIM you operated from, Brain!

With the exception of Somalia, I have QSL cards from all of them.
In many cases from YEARS before you claimed to have been there!

> > >And I presented the number of countries
> > >that I worked because you asked.

Two things are noteworthy. Your rearranging of attributes and the
previously discussed misquote.

> > The question was ""Of course YOU know this from your lofty position of
> > number...WHAT, on the DXCC roll...?!?!"
> >
> > You are not ON the DXCC roll, Brain...Not under ANY of the calls you have
> > cited.
>
> Papers, I demand your papers! OK, Sgt Shultz.

Still no proof. Still just a boast until proven otherwise.

> > >As far as DXCC goes, I don't need the ARRL involved.
> >
> > I am sure Dave Sumner is laying awake at night distraught that you won't
> > send all those juicy "DX" QSL's in for verification.
>
> Let me reference Part 97 where it says that I must participate in DXCC
> if I want to work DX or be DX.

It's got nothing to do with Part 97, Brain.

It has to do with your complete lack of credibility and
documented mistruthfulness.

> Hi, hi! I hope you're holding your breath because it will be a long,
> long time before I'm able to post something like that.

No problem.

It will be an even LONGER time till you're able to post any
LEGITIMATE DX operating claimns, in as much as none of it seems to be
documented.

> > >I neither ask for "thier" approval nor
> > >endorsements. The DX is in my logs, and if the other station wants a
> > >card, all they have to do is QSL me through the buro. By the way,

> >
> > No problem, Brain.
>
> Apparently so. You demand to see my papers, my DXCC number, my shoe
> size.

I could care less about your shoe size, Brain. Your foot seems
to fit in your mouth just fine without it.

And as long as there's nothing to back up your claims of operating
from these DX locales, there's no proof you were there except for
military orders, and that STILL does not substantiate any validity of
AMATEUR RADIO operation.

> > I have KH2 worked, confirmed AND annotated for DXCC.
>
> All bands, all modes?

Just needed it once, Brain.

However I have confirmed it in three modes...CW, SSB and RTTY. I
worked it on PSK31, but no card yet.

> > And the ONLY person who can't see what a FOOL you are is YOU!
> >
> > Sheeeeeesh!

> Nope, the quote is correct enough. Quitecorrect! You don't get to
> slither out of it on a technicality.

No slithering.

No "technicality".

You are a fool, and you are, seemingly, unaware of it.

> Maybe you'll explain to Rev. Jim the MMF part. I've notice that he's
> been letting some stuff slide on through uncensored.

Perhaps you'll apologize for having at once claimed you didn't
misquote me and then had it spoon fed back to you.

> Best of Luck potty mouth.

Coming from you, Brain, this means something?

This is outrageous!

I am resigning my ARRL membership today.

The ARRL announced it is endorsing John Kerry for president. I always knew the league was a leftist organization, and now they have proved it by endorsing Kerry. I predict a flurry of resignations. The ARRL really stepped in it this time!

Bill Fane
San Francisco

Two things strike me here...

First of all is that there is NO ARRL announcement of such a thing, and...

Two...No "FANE" living in San Fransisco, and only ONE FANE with an Amateur license...and not a "Bill" or "William" in the bunch.

Anonymous punk liar.

Gee...that's kinda the way YOU are with character and honesty!
The majority of US believe that you tell the truth and own up to your
mistakes.

YOU believe that mistakes are yours to be made, and if you make
one, just don't acknowledge it, it will go away.

Steve, K4YZ

>> do with amateur radio policy of today?
>
>Very very little.
>
Actually, quite a bit.

>> 1912 was the year of the first U.S. radio regulating agency.

No, that's not true. Radio was regulated by the US and by international treaty
before 1912. The regulations were very vague and loose, but they did exist.

>> That's
>> about the only "relation" to the subject of the Titanic and a very
>> tenuous one...if at all. :-)

Wrong again, Len!

Because of the Titanic disaster, the existing loose regulations were tightened
up and much more closely defined. Licenses were required of all transmitting
stations, new procedures set up, new treaties and agreements put in place.

And it was because of the Titanic disaster that amateurs were limited to "200
meters and down" and 1 kW input to their transmitters. Those limitations caused
amateurs to organize themselves into groups like ARRL (1914), to push for
legislative protection, and to explore what could be done with those supposedly

"useless" wavelengths.

Had there been no Titanic or similar disaster, it's very probable that the loose state of radio regulatory affairs would have continued until the outbreak of WW1.

And it's also very possible that without the Titanic disaster, amateur radio would not exist today, or even after WW1.

Perhaps that's why Len gets so worked up over mention of the Titanic.

Or perhaps it's the fact that the rescue was effected by Morse Code used on radio that gets Len so upset.

>>>>> For the bleeding-heart imaginary sailors aboard, I won't cry

>> the passengers and crew of the Titanic who perished in 1912!
>
>When one would have been sufficient. Respect doesn't make a person a
>"bleeding heart".

Len laughed at the disaster when I wrote that hitting the iceberg head-on would have probably saved all aboard. And he refuses to show any respect for those who perished.

Just three nights earlier than the Titanic disaster the liner Niagara plowed head-on into an iceberg at almost the same spot where Titanic sank. Although passengers were thrown to the deck and the ship was damaged, and an SOS was sent, no lives were lost and the ship continued to New York under its own power.

One is known by his friends.

Odd that you would call that story a left wing twist. I always
considered the commies the ultimate in left wing-ism.

Before you say they aren't commies any more.....Give it a little thought.

So...You're telling us that you KNOW that you are of poor character and
that the only way you can "fix" your lying and deceit is to be a physician?

Nice try to snip and get around the IMPORTANT parts of the question,
Brain.

BTW, My apology to Hans has been up there for 24 hours now and you STILL
have yet to acknowledge YOUR errors and mistatements, both of which are well
OVER 24 hours old.

I did exactly what I said I was going to do when I said I was going to do
it.

All YOU have done is make excuses and fully exercised your "right" to lie
and deceive.

As usual.

Steve, K4YZ

> For example - what would you do for air intakes?

Are you kidding?? It's called ventilation piping and has been around
since long before the Titanic was designed. ALL compartment areas in
carriers which are below the hanger deck are completely sealable, air
conditioned, heated and humidity-controlled by marine HVAC systems for
instance. Have you *ever* been on a ship??

Takes at least two people to make a fight. Steve and mayself don't get into verbal battles. And I'm certainly not afraid of him. If I disagree, I'll tell him so. And despite what "William" wants me to do, I'm not going to step into one of you three's battles and slap his hand. You are all big boys now, and responsible for your own behavior!

> It's all been public. Nursie is eager and chomping at the bit
> to FIGHT with anyone.

Okay, if you and Brian aren't, then show it. But you enjoy it, IMO, so why defend it. If you like having verbal sparring matches with Steve (the boys down at the shop used to call 'em whizzing contests) then have at it. Want to have a nasty toned battle of wits? Enjoy! 8^)

Its the complaints and defenses I don't get.

You seem to give the Morse test the same amount of weight as
Pseudo-Conservatives give to the mythical "Liberal". This critter is
responsible for all the ills in the country, despite there being almost
no liberals left. Somehow, some way, the one or two liberals left manage
to gum everything up.

> Other than to this circle of "friends," somewhere in the neighborhood

>>study the material.
>
>
> Why? :-)

Each person must answer their own "Why". I figured that since I only
have so many years on this earth, I would take the time and learn Morse
code. Spent 6 months of an hour or so a day. The rewards have been that
I have had my (Morse code tested) license for 3 years now. That's three
years out of my life that I wouldn't have had it if I refused to learn it.

YMMV

Your "Why" would indicate that you simply aren't interested in the ARS
to the level that you would take the effort to get the license.

That's okay. If you don't want to be a Ham, no one is can stop you. Or
even a hamme! ;^)

> I'm really only interested in ending the U.S. amateur radio license exam

Nope, you don't have to. Purely voluntary stuff.

> I do NOT need to "study material on any other test element" just to
> get a federal merit badge saying I am "authorized" something or
> other.

Purely voluntary stuff there.

> You seem to forget that I was ON HF very legally and
> correctly over a half century ago, over four decades ago, over three
> decades ago, and even earlier this year...all without having ANY
> requirement to "study morsemanship material."

I could never forget! 8^)

Of course if you are happy, then that is great. I've only been on HF
for a few years now. Enjoying every minute of it.

I must confess I don't personally compartmentalize it into HF or Not
HF. It's all good, MF, HF, VHF, UHF!

>
>>I had great difficulty with Element 1 preparation,

When did they allow the hams to start up again? Did they need to
reapply for a license?
I remember my father transmitting in S Calif, but maybe that was after
WW II was over. And, no, he wasn't a spy; he was in the US Navy during
the war.

Thanks,
cworonow@ix.netcom.com

I saw a picture of an Air Force plane that was about to
fly right into the ground at their airport. Seems the
pilots were doing some silly frat boy stunt (mooning the
guys in the control tower) and lost control. It was a
plane similar if not in fact a B52. This happened years
ago.

The Titanic was cited as an example that sometimes "Professionals"
screw up. In connection to that TV/DVD/VCR that QRMed the
emergency frequencies. That "professionals" designed that.

It does indeed. And my BC-221 is still intact. (my BC-221-AA
actually, made by Philco in 1942, with a big WWII-vintage Royal
Canadian Signal Corps decal on its side - pretty neat!).

As it should be. :)

Are you really the person posting as "William"? I don't recall using
"Len", "Leonard" or "Foghorn Lenhorn" when addressing you. I typically
refer to you as Len or Leonard until you start using the cutesy names.
That's when you become Foghorn.

> LenAnderson@ieee.org

Okay, LenAnderson@ieee.org

Per N2EY's query, why do you find it difficult to use another's given
name?

I don't see any testing which is archaic or imaginary. I don't see any
testing done because old timers had to do it.

> I say enjoy freedom.

Freedom doesn't mean reduced regulation or no regulation.

> I say try to keep
> up with the technology. I say the technology isn't restricted solely

Yep, I can't envision myself ever wanting to use or to buy sa a TRS-80, which is the first PC I ever used, but I could envision using and buying lots of old radios.

And it's not even nostalgia, since I wasn't around when those radios were. They are simply cool!

Mebbe we should check with the CAPman on that. He's practically a
Boeing insider when he jumps into that jumpsuit.

The relevant question is "Steel chassis or Aluminum chassis?"

"Greenlee punch or Nibbler?"

Such relevant questions.

Indeed. An extremely rare occassion that makes the word "all" and
"always" no longer applicable. Maybe yesterday, but not after today.

Or is it just a hedge?

After all, the ARRL has yet to respond. Then there is 73 Magazine,
the defunct Ham Radio magazine, World Radio, Nuts & Volts, and the
JARL publications.

Maybe it's time to explore all of the historical RSBG letters to the
editor.

Leave no stone unturned.

"I've never apologized in my life, EXCEPT that one time to Hans..."

Shamed into it by the NCTA. I guess we do have a use.

Hi, hi!

Hmmmm? Calling a fellow poster a Yiddish word for Penis? Always
focussed on the male genitalia? Sure, that's your MO.

"Red-Assed Monkey" suits you to a tee, but takes up too much
bandwidth. I'll stick with "Steve" when referring to you. Whenever
you see me post "Steve," you'll get it. Goes with your former gunjeen
callsign and tight flight suit.

Best of Luck.

They are not required to respond.

Dieter makes accusations, but fails to follow-up with any substantiative
proof to the allegations.

since ARN is a 501(c)(3) non-profit, there are regulations that have to
strictly adhere to under IRS rules. so far, I have seen NOTHING that
indicates thay have violated any of those regulations.

Please kindly show all of us where ARN HAS violated those rules (complete
with actual sources please). Otherwise, shut the hell up. false accusations
do nothing but make the accuser look foolish and harm the reputations of
those wrongly accused.

> spent hours googling for LOL

You are the ONLY one here whom spends hours Googling. I don't give a shit. But please, be my guest and explain how, in your infinite wisdom, I have made Doug Adair, N8WWM the nutcase/psycho/demented/delusional nutjob that he is. This should really be interesting. I'm not a keyclown, any more than you are, but Doug is truly a nutjob, and that fact cannot be denied. If you have doubts, please reread the post above. It is a very clear and concise medical definition. It fits Mr. Adair to a "t". It does not take a rocket scientist to realize your "friend" is truly fucked up, and the keyclowns will probably disown me for this, but I suspect you have realized the same. (remember the kudos you erroneously gave me?)

>1) doesn't concern you in any way.

Another lie per Leonard H. Anderson.

He stated in THIS forum that he was going to get an "Extra lite out of the box".

Still not done.

His assertion that he would is archived herein.

WHEN will that PUTZ ever learn...?!?!

Yes, they have, actually:

QUOTE

Steve,

I have a couple of possibilities for you:

Jul 1992 QST p 40--Wally and Mike: The Podunk Repeater Club--Kearman, Jim, KR1S

May 2000, “Correspondence,” “No Lids, No Kids, No Space Cadets” by Dave Mitchell, K8DM

If that particular installment of "Wally and Mike" isn't the one you remember, it may have been another in the series. Search the on-line index for author KR1S and you'll find the others.

Hope this is helpful.

73, Joel
Joel P. Kleinman, N1BKE
Managing Editor, QST

UNQUOTE

You'd do well to NOT make assertions of fact for those things which you do not KNOW to be fact, Brain.

>Shamed into it by the NCTA. I guess we do have a use.

You have shamed NO ONE, least of all me, into anything, Brain.

>Hi, hi!

You SHOULD laugh, Brain.

You've been chastising OTHERS for a week now over "apologizing" for making errors, etc, however YOU have yet to make good on assertions and mistruths that were uttered AFTER comments were made that made your assertions utterly rediculous.

So when are we going to see what kind of man YOU are, Brain...???

Or have we already seen it?

Steve, K4YZ

> My bad. So sorry.

What the heck, Brian? If you post something, and someone disagrees with
it, is THAT what you mean by not being allowed to have a different opinion?

I kind of thought that was what we were here for.

As for off topic, yourself and LenAnderson@ieee.net are the ones complaining of messages being off topic.

C'mon, you are starting to sound like a "victim".

As a conservative, I can tell you that you don't have to be a victim. You are responsible for your actions, and don't have to be a victim. Once you do that, your life will take on new meaning, with unlimited possibilities opening up that were denied you by the liberal's "victim trap"

They first started showing up in other electronic oriented groups and
are believed to contain information of interest to shadow electronic
and communications interests, such as unlicensed broadcasters,
CB radio shops, surveillance types, etc. Specific information they
contain probably includes inside FCC information obtained from
sources inside the FCC, surveillance equipment trends, etc. The
FCC is one of the most "leaky" organizations there is.

There's a blast from the past. Cecil departed here years ago, but you
have made mountains of false accusations since Cecil's departure.

> So far you've not been able to delineate ANY facts, Brain.
>
> Nor have you kept pace with your own rhetoric.
>
> Steve, K4YZ

No one can keep pace with your unfounded accusations.

So which one of the above did Hans plagiarize? Or should Hans have
sent a clarifying note to the ARRL also?

> You'd do well to NOT make assertions of fact for those things which you do
> not KNOW to be fact, Brain.

"Sorry Hans, MARS >>>IS<<< Amateur Radio!" is not an apology, and it's
not even a fact.

You'd do well to take your own advice.

> >Shamed into it by the NCTA. I guess we do have a use.
>
> You have shamed NO ONE, least of all me, into anything, Brain.

Then you have no shame, a'la Clinton.

> >Hi, hi!

Hi, hi, again!

> You've been chastising OTHERS for a week now over "apologizing" for making
> errors, etc, however YOU have yet to make good on assertions and mistruths that
> were uttered AFTER comments were made that made your assertions utterly
> rediculous.

That old song and dance is getting, well, older. But it's good to see you apologize for making such stupid accusations at least this time.

You have mountains of stupid accusations to work on. Best of Luck.

David Heil said that "I just did it" with respect to getting "Extra
right out of the box." But Dave's first license was Novice. Did
David lie?

Best of Luck

"Blast from the past"...?!?!

Cecil's been the topic of discussion here for several weeks...Including
YOUR suggestion that you might "...pull a Cecil..."

And I've already shown where I got my attributions wrong with Hans' story
vs the one I read in QST.

An error. I admitted it and apologized fror it.

Unlike you, Brian P. Burke, who is an unashamed liar.

Period.

What apology that is a lie?

The intended recipient thought it was appropriate and sincere.

This week alone YOU have been caught in no fewer than five
asssertions that were either just acts of blatant ignorance, or
out-and-out deceit.

Why is Brian P Burke a liar?

Why does he find it necessary to claim others are deceptive when
all evidence is that HE is the one with a "truth issue"...?!?!

You're a liar, Brain. Untruthful. Of poor moral character.
(Which is giving you credit for SOME character...)

Steve, K4YZ

These days these newsgroups have pretty much gone to spam and OT subjects.
I read them for the laugh value, and get my serious information from the
various sigs and Yahoo groups. Amateur radio newsgroups are going the way
of packet radio.

>http://www.mathematicshelpcentral.com/graph_paper.htm

Thanks, Mike. The linked program for generating your own graph
paper is also handy.

If one has a good scanner, it should be able to repro exact
dimensions...such as copying the (copyrighted) commercial
graph papers (such as 3-, 4-, 5-log types or Smith charts)
which are "non-standard" for anyone not in electronics. :-)

I use a combination of PDFs, BMPs (via MS Paint) to get 1:1
drill guides for PCBs and small chassis structures. With either
Corel or Adobe photo edit programs you will find that one can
do quite-exact photo reductions of 2:1 or even 3:1 by the
adjustment of pixels per inch in either Corel Photo House or
Adobe PhotoDeluxe 3. Other photo programs should be able to
do the same thing. Good for one-of-a-kind projects.

I've regularly done 2:1 scale manual PCB resist traces on a pad
of vellum (gridded 0.1"), scanned that into BMP format, cleaned
it up in MS Paint (image attributes set to B&W), dropped the
scale to 1:1, and done the etch masks on VueGraph transparent
stock. Note: Paint allows adding lettering, numbers, etc. as you
need. All without going out to any photo services. Again, good
for quick one-of-a-kind projects.

randy now read this slowly so you can understand it. it doesnt matter
who Doug is or what hes done or you think hes done. you and the other
keyclowns are obsessed with him, you talk about him when hes not
posting, you cant even forget him for one day. You guys are busy
forging posts from him, leg humping and sock puppeting. Now honest

randy dont you see anything unusual about all this activity you and the NG is devoting to Doug??instead of talking about cb or amps you are concetrating on N8. could it be he wants it that way?ROTFLMAO

You and Lennie hardly qualify as "people"...Not the kind of people I'd
invite over for dinner, or would want to be seen associating with in public,
anyway.

>You look around and you see penises.

No...I see a couple of Putzii. That would be you and Lennie.

>It's all just a matter of perspective and honesty.

Brian, you are a documented liar.

You do not tell the truth.

You chastize otehrs for doing/not doing things, and then do not ahere to
your own rhetoric.

You are disreputable, dishonest and without redeeming character.

>Best of Luck.

For what?

Always being two steps ahead of YOU...?!?!

BBWWWHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHA ! ! ! !

That didn't require ANY luck! YOU make it too easy to do!

Steve, K4YZ

> does George Bush continue to fund those idiots?

NPR gets less and less gvt funding every year. 65 percent private/35
percent public

There is a downside to that though. When Newt ad his buds originally
started the pull the pursetrings on NPR, the idea was that they would
melt and go away like the wicked witch of the west after getting doused
by Dorothy.

They didn't - they thrived, adapting to the new situation. As they
receive less and less government funding, they have more and more
autonomy. At this point I would assume that they enjoy the money that
they still get from the gvt

And that is the downside - less control.

I actually get my news from NPR and Reuters now. Despite NPR's middle to left perspective, they actually report so much more than the other organizations - Network news sucks, CNN is weird, and Fox News is great if you are a Pub that only wants to hear news that agrees with your world view.

>
>And here I thought that SAC invented the checklist. Thank goodness I
>read RRAP.

SAC no doubt improved on the checklist...but Boeing made so many
of the SAC aircraft that there must have been some transfer of
methods and procedures. :-)

Nephew-in-law works for Boeing in the production complex near
Marysville, WA. But, I was somewhat familiar with Boeing aircraft
long before the family got extended.

>> >>> Of course there was the PROFESSIONAL pilot who tried to roll a B-52 at

>
>Saw him in a movie. Sittin atop an A-Bomb. Oooop! He jarred it
>loose.

"Dr. Strangelove." :-)

Yeah, like a (mximum) 200 pound male can "jar loose" 4000
pounds of bomb (approximate weight of a special weapons of the
time) from its shackles designed to take many g of force. :-)

Tsk. These guys go to the movies and think that all the FICTION
they see is the TRVTH and nothing but... :-)

>> Who cares? Jimmie never served his country in a military capacity,
>> wouldn't have any need to ride a B-52 for any reason.
>
>But he likes to write about it.

Sure does...and really, really bristles with antagonism on the slightest
negative comment on what he say...

B-52s are older than Jimmie...he MUST love them for that reason.

>Is this the part where he is called a non-participant? A mere
>spectator?
>
>Or was that Kelly?

Both. :-) Except Kellie DID have dinner with the Captain! :-)

Jimmie has some fundamental seamanship flaws. It's easy to
drive (excuse me, sail) a Sabot directly into an iceberg to "save
the passengers (at most two)." Brian Kelly knows better than
that so I give him credit for some common sense, sailor-wise.

>> >>>> Not to worry. U.S. amateur radio regulations are Up To Date.

>
>The relevant question is "Steel chassis or Aluminum chassis?"
>
>"Greenlee punch or Nibbler?"
>
>Such relevant questions.

Actually, it would be. Jimmie say he build with "recycled parts"
and his "rig" didn't cost him more than $100.

Now anyone considering any sort of metal work for radios had
better have $ome money since an average aluminum chassis
from Bud Industries, LMB-Heeger, or Hammond Manufacturing
(good folks in Canada) is going to cost about $30...and that isn't
including a bottom cover plate. Metal cabinets are Out Of Sight.
Check any catalog, paper or on-line, Allied, Newark, DigiKey,
Mouser, even Ocean State Electronics.

Some alloys of aluminum are sort of malleable. 2024 is somewhat
that way but don't bend it too much. 6061 is NOT. One can't take
a chunk of ordinary aluminum and hammer it flat to fill in the holes
(using "recycled" i.e., previously-used), then bend/brake it back to
some new shape. That means BUYING chassis somewhere...or
snaffling ("swipe") them. At early 1990 prices, that average
chassis alluded to before would cost about $25. So, for six chassis
in the photograph that would be a total of about $150.

The excuse to be given will be that he "bought it at a flea market"
or some hamvention for "a very low price." :-)

Whatever the story is, it will have the usual embellishments, the
brags of greatness, the usual suspects. :-)

>> >>>> It seems that some amateurs

heh heh heh Another PROP...but not about aviation...

Quaker Oats still does some packaging in round (thin) cardboard
cartons. In the 1920s that would have been a very low-cost "coil
form" for the 195-meter wavelength hammes of olde.

>> Reinvent the 1920s and claim your fame as the "innovator!"
>>
>> Good grief.
>>

>Whatever he tout's is da troof!

Hugo Gernsback (of the publication fame) wrote "Ralph 124C41+"
way way back. TERRIBLE writing. Fiction wasn't his thing and
one can suspect he became a publisher to control the editors who
wouldn't buy copy from him as an author. :-)

I read it in one sitting in 1953. Small thin book. Dreck. It is so "camp" that the Science Fiction Writers of America wanted to name the annual SF writing award trophy as the "Hugo." :-)

Gernsback could have become a "leader" in ham radio way back in the early 1920s. He had branched out too far into other radio, trying to be a visionary. Gernsback Publications was much much larger than what the league could get together.

Right on! :-)

But...I've got you beat on who made what...the Lewyt Vacuum
Cleaner Company made a bunch of 7-foot tall BC-339 trans-
mitters for the USA Signal Corps during WW2. Said so on the
little nameplate. I suppose some (who weren't born yet until a
decade after that war) will say "those suck!" :-)

Tsk. Another "professional" (in electronics...claimed) is nuts over the Titanic sinking and thinks it is responsible for all the early radio regulations. <shrug>

Yes, "professionals" can make mistakes. That's because there are lots and lots of professionals. :-)

The Titanic disaster was one mainly involved with seamanship, not amateur radio...not even radio (as it was then) per se.

Consumer electronics ("TV, DVDs, VCRs, etc.") is not directly involved with amateur radio.

International Civil Aviation Emergency Frequencies don't involve anything in amateur radio.

Unless there's some very quiet John Beresford Tipton multi-billionaire giving away radio equipment to radio amateurs, most amateur radio equipment is designed and built by professionals (i.e., making some profit on that sort of thing).

U.S. radio regulators (the FCC and NTIA) are all professionals. The folks at the NTIS are all professionals and they determine the standards that both pro and amateur depend on for accuracy.

Nasty old "professionals," ey? Can't trust 'em for a minute? :-)

>going to step into one of you three's battles and slap his hand.

The avenging angel of rrap is unshutupable. :-)

He putz me to sleep sometimes. :-)

>You are
>all big boys now, and responsible for your own behavior!

Thank you Mike Tyson. [excellent taste? :-)]

> Okay, if you and Brian aren't, then show it.

Show what?

Stop objecting to personal insults? Stop objecting to insulting remarks
about spouses? Stop objecting to manufactured lies he makes about
my past?

I've stopped that. You haven't noticed.

>But you enjoy it, IMO, so why defend it.

I don't enjoy it. It's tiring because his emotional tirades are repetitive,
sometimes mirroring what I've said about him in the past.

In general, the PCTA comments on retention of the code test are
(and were long ago) repetitive, puerile, and invalid. All any of them
can do is resort to is pejorating any outspoken NCTA.

>If you like having verbal sparring matches with Steve
>(the boys down at the shop used to call 'em whizzing contests) then have
>at it.

We are all big boys now. You can call them pissing contests
rather than use the cutesy euphemisms.

>Want to have a nasty toned battle of wits? Enjoy! 8^)

Pissing contests with nursie are NOT any "battle of wits." :-)

> Its the complaints and defenses I don't get.

So...do the "boys down at the shop" call you "penis head?"

In any language or dialect? :-)

Do you LIKE that sort of thing?

> Just a habit of mine to not speak ill of the dead.

Feel free to say nice things about Adolph Hitler, Joseph Stalin, Ted
Bundy. They are all dead. :-)

>> I'm "high" on life itself. No drugs or substances needed.
>

It's still true.

>> Nor any morse code fantasies as the epitome of hobby radio arts.
>
> Never had a Morse code fantasy in my life.

Others DO. "Try it, you'll like it!" :-)

> You seem to give the Morse test the same amount of weight as
>Pseudo-Conservatives give to the mythical "Liberal". This critter is
>responsible for all the ills in the country, despite there being almost
>no liberals left. Somehow, some way, the one or two liberals left manage
>to gum everything up.

Tsk. You mistake persistence for obsession. :-)

Morse code was a boon to landline communications two centuries
back (in the 1800s), enabling the wired telegraphy service providers

to give good service to all needing quick communications.

When radio as a communications medium was demonstrated, morse code was used...not because it was unique, the best, or any other positive attribute. On-off keying of early radio transmitters was the ONLY practical means to use technologically-primitive early radio apparatus for communications.

For some radio amateurs in the United States, morse code skill is about the ONLY thing they have to show their "superiority" in a radio service that is still just a hobby. Tsk. Those amateurs are the ones seeing a mythical "sky is falling" scenario if the code test is ever eliminated. Not my paranoia. :-)

I've been transmitting RF energy legally since 1953, over more parts of the EM spectrum than is allowed to radio amateurs. Never had any requirement to demonstrate any morse code skill to anyone in order to transmit below 30 MHz...or above it. Doesn't make any personal difference to me whether or not the code test stays or is tossed in the dumpster. It's time the code test went to the landfill. It's long overdue.

All those PCTA extras just hate the thought of removing the code test. For so many of them it's all they've got to show their eliteness in a hobby. <shrug> Some of them get rather angry and want to "fight" about it, calling any persistent NCTA personal insults.

> Each person must answer their own "Why". I figured that since I only
>have so many years on this earth, I would take the time and learn Morse
>code. Spent 6 months of an hour or so a day. The rewards have been that
>I have had my (Morse code tested) license for 3 years now. That's three
>years out of my life that I wouldn't have had it if I refused to learn it.

I've operated in many radio services. Never once had to use any old morse or be required to know it...even though I did "know it" once, way back in time. Doesn't matter. I don't look on the code test as some kind of my-personal sort of thing. The code test isn't necessary for the FCC nor anyone else except all those Archaic Radiotelegraphy Society "extras."

As to personal time spent "learning" something, I've spent many more hours per day over many, many more months to complete my formal schooling. One PCTA extra considers that on-par with remedial "night school" classes held for immigrants and such. :-) Of course, the same individual considers the University of Illinois or the University of Wisconsin as "correspondence schools!" Hi hi.

> Your "Why" would indicate that you simply aren't interested in the ARS
>to the level that you would take the effort to get the license.

Tsk. I don't "owe" anyone a reason for my doing anything. :-)

Do you "owe" someone anything for talking about politics? Does one
HAVE to be IN politics to talk about it? :-)

I'm not interested in joining any Archaic Radiotelegraphy Society.
You forget I HAVE a federal radio operator license and obtained it
long ago. :-) Not a big deal. Had to use it only two years after
getting that in 1956. Such federal licenses make some folks think
they are real big shots (stretch that O vertically). Not me. Just a
piece of paper.

>> You seem to forget that I was ON HF very legally and
>> correctly over a half century ago, over four decades ago, over three
>> decades ago, and even earlier this year...all without having ANY
>> requirement to "study morsemanship material."
>
> I could never forget! 8^)
>
> Of course if you are happy, then that is great. I've only been on HF
>for a few years now. Enjoying every minute of it.

Enjoy, enjoy.

> I must confess I don't personally compartmentalize it into HF or Not
>HF. It's all good, MF, HF, VHF, UHF!

You MUST compartmentalize in THIS newsgroup. Tested
morsemanship is "necessary" to operate on HF ham bands!
Absolutely! :-)

>> I always study for my blood tests. So far I've passed every time.
>
> Good job, that! 8^)

The trick to that is staying away from downtown Transylvania...

> My Newsreader wants to call you Len Over 21

If your newsreader is licensed, have it call my Internet software
on 9015 KHz USB. They can do electronic lunch.

> I don't call people nasty names. Just what they prefer to be called.
>that's why I asked

"Putz" (penis head in Yiddish) is not "nasty" to another PCTA extra
in here. It is very nasty along Maxwell Street in Chicago. Another
in here just calls me "wrong" and "incorrect." :-)

You can call me anything...but that would be incorrect. :-)

You can't figure out from my "signature" what a preferred short form
given name of mine should be? Tsk.

>Anyone can see you are.

Tsk, tsk. The "whizzing" is almost entirely one way, nursie
"whizzing" on anyone who disagrees (in the slightest) with
him. [that's all archived in Google, go live in the past and see
it...:-)]

>It's a plain, simple fact.

Tsk, wrong again. Error. Mistake.

Worse yet, you use "fact" interchangeably with Your Personal
Opinion. Not correct.

>>> Now YOU tell us what the Titanic's sinking of 92 years ago has to
>>> do with amateur radio policy of today?
>>
>>Very very little.
>>
>Actually, quite a bit.

Wrong again. Quite wrong.

>>> 1912 was the year of the first U.S. radio regulating agency.
>
>No, that's not true. Radio was regulated by the US and by international treaty
>before 1912. The regulations were very vague and loose, but they did exist.

Tsk. What agency had the official power of law in the United States
prior to 1912?

"Loose and vague" apply to your specious "arguments" there.

>>> That's
>>> about the only "relation" to the subject of the Titanic and a very
>>> tenuous one...if at all. :-)
>
>Wrong again, Len!

No. Not "wrong" in the real world.

You need to sever your imaginary ties of emotion to a pet subject
of yours in order to examine the bigger picture.

There was NO REAL RELATION of the Titanic disaster event to U.S.
amateur radio policy, regulations, or laws. If you notice the
chronology, all that can be said is that the creation of the first U.S.
radio regulating agency and the Titanic sinking took place in the same
year, 1912.

>Because of the Titanic disaster, the existing loose regulations were tightened
>up and much more closely defined. Licenses were required of all transmitting
>stations, new procedures set up, new treaties and agreements put in place.

That's an absurd mental elastomeric stress breaking point. :-)

I would suggest that anyone who really cares about the very early history of radio to study Hugh G. J. Aitken's "The Continuous Wave, Technology and American Radio, 1900-1932." Princeton University Press, 1985, softcover 561 pp. At the time of writing, Aitken was a professor at Amherst College and the work was supported by the National Science Foundation.

There was considerably more involved in the decision of the United States to create its first radio regulating agency PRIOR to the Titanic sinking. [agencies aren't created overnight by some disaster even and the start of the first radio agency in the U.S. began considerably before the infamous sinking]

>And it was because of the Titanic disaster that amateurs were limited to "200
>meters and down" and 1 kW input to their transmitters. Those limitations
caused
>amateurs to organize themselves into groups like ARRL (1914), to push for
>legislative protection, and to explore what could be done with those
supposedly
>"useless" wavelengths.

Tsk. You aren't in line with the ARRL's own bio of its creation. :-)

The way the league wrote themselves up, they began as a local club using their ham sets to what was essentially hacking on the services of commercial telegraph providers. [see the details on the league's web site and in other published works by them]

ARRL did not spring into national prominence until AFTER World War 1, at least 8 years AFTER the Titanic sinking. Even so, the league was very busy with competition from OTHER wannabe national amateur organizations. Note: The Radio Club of America began 5 years before the creation of the little New England club, and "RCA" (as they call themselves) is still in existance.

>Had there been no Titanic or similar disaster, it's very probable that the
>loose state of radio regulatory affairs would have continued until the
>outbreak of WW1.

Tsk. World War One (in Europe) began in 1914. The ARRL was created in 1914. :-)

I could "connect the dots" like you so cavalierly like to do with dates and say there is a "relationship" in the above...but I won't. Its just a chronological coincidence.

>And it's also very possible that without the Titanic disaster, amateur radio
>would not exist today, or even after WW1.

Yes, yes, "The Old Man" Went To Washington To Save Ham Radio!
AFTER the end of World War 1. Six years AFTER the Titanic
sinking.

Rev. Jim is sermonizing from the league's version of the good book.

If Aitken's book is too scholarly (it actually reads well), then there
is the more readily available Thomas H. White's website:

http://earlyradiohistory.us/index.html

"White pages" cover the period 1897 to 1927 and are not biased to
amateur radio subjects. [that may be objectionable to PCTAs]

>Perhaps that's why Len gets so worked up over mention of the Titanic.

Tsk. Here begins Rev. Jim's "fire and brimstone" demonizing. :-)

Noooooo. The Titanic sank in 1912. That is NINETY-TWO YEARS
AGO.

>Or perhaps it's the fact that the rescue was effected by Morse Code used on
>radio that gets Len so upset.

Tsk. Way back then (92 years ago) ANYONE using radio for
communications HAD TO use on-off keying of some kind.

92 years later, hardly anyone (except for a few amateurs, a minority)
use on-off keying communications modes.

>Len laughed at the disaster when I wrote that hitting the iceberg head-on
would
>have probably saved all aboard. And he refuses to show any respect for those
>who perished.

Tsk. Sneaky implied pejorative. :-)

I don't claim to be a mariner at all despite having crossed the Atlantic
and Pacific twice by ship and gone sailing on a friend's 35-foot
something or other (forget the class of sailboat), all as a passenger.
I WILL laugh and laugh at the thought of "expert seamanship" involving
"hitting an iceberg (or anything else) head-on in order to save it"!

Ain't nobody going to get "respect" for stating such alleged "safety
measures" to stay afloat at sea as "going head-on into a berg."
Defies common sense. :-)

I don't show any "respect" for ANYONE stating that "hitting <anything>
head-on will save a ship."

Enormous good luck on ever passing any ship's masters exam,
sailor...

>Yes, Len. You have that problem.

Heh heh heh. My only "problem" is taking your trolling bait, grabbing
the line, and then tying you all up with that line. You had best swim

head-on into the dock in order to stay above water. :-)

>It sure seems to. You're obsessed by it.

Tsk. Persistence is not obsession.

I'm not in here every day. :-)

>>> I haven't gotten an amateur radio license yet. :-)
>
>That's a good thing!

Why is that "good?"

Are you in fear that your Eliteness in the Archaic Radiotelegraphy
Society will be diminished? :-)

>Besides, on January 19, 2000, you told us you were going for Extra "right out
>of the box".

Did I do that in church? Laying down in the nave, forming a code key
with my body and taking absolute Vows? :-)

Tsk. I've seen what Being An Extra makes of some amateurs and
such is not for me.

I'm of the opinion that radio and electronics is terribly fascinating,
interesting, and makes an enjoyable field of both avocation and
occupation. To me. So much so that I made a major shift in my
formal education long ago, changing from illustration art to
electronics engineering. That despite a natural talent in
illustration and some prior work experience as an illustrator.
That was personally successful, not the "lackluster career" you
stated.

I do electronics hobby work in my home workshop to please me,
not some raddio kopps demanding a certain formal Way To Do
Things, nor worshipping the old traditional ways as they were
done long ago, trying to re-enact a past that was before I was
born. The future happens right after now and I keep looking forward
to new things, to enjoy them.

>What person are you referring to, Len?

Whomever. :-)

>Note how Len avoids the question about why the code test bothers him so much.

It doesn't "bother me." :-)

You've long since run out of valid arguments to retain the U.S. amateur
radio regulation requiring passing a code cognition test for operating
privileges in amateur bands below 30 MHz. You've resorted to the
usual PCTA demonizing of any NCTA who dares to talk back to a
member of the Archaic Radiotelegraphy Society (ARS).

As predicted, you've gotten all emotional and upset about being (in the slightest) corrected on certain (actual) facts (not your opinions although you use fact-opinion interchangeably).

You want to keep the ARS in your version of pure, pristine, and prissy-literally and don't (now) hesitate to pejorate others and make some mild perjerous remarks to "reinforce" your opinions (which you call "facts").

>Besides, it wouldn't matter what sort of homebrew rig I produced - Len would
>have lots of disparaging things to say about it.

Tsk. You took your rig's photo. You put it on an AOL home page.

One photo. Doesn't go into much detail. Six and a half cabinet-less chassis with lots of vacuum tubes. No schematics. No descriptions in detail that you claim visitors are astounded about. :-)

>What homebrew HF radio transceivers have *you* produced since the mid 1990s,
>Len, using only your own time and resources?

No transceivers on HF. :-)

Tsk. Getting puerile with the "challenges" there, Jimmie.

As usual, you've wasted my time. But...I was sitting around waiting for the big brown truck to show up as promised on the tracking info. :-)

Tsk. Is it a new "world serious" game you want to play, complete with recycled "body parts" (radio bodies, that is) and "scoring" of how many HF transceivers everyone has "homebrewed?" :-)

Sorry, Jimmie, not a game I want to play. I'll just watch Boston and St. Louis on live color television and cheer the Red Sox when they win. They are all PROFESSIONAL players! :-)

LenAnderson@ieee.org

Didn't have computerized package tracking in 1912. Didn't have UPS FedEx, or DHL then, either and the USPS was just the "post office" and they never guaranteed overnight delivery across the country in 1912.

>

Heh heh. One of those offenders claims to be a working
professional (i.e., performs electronics work for monetary
compensation) electronics engineer...who implies that
"professionals" don't do good work, make mistakes, etc.
That one hasn't identified his employer on the basis of
"other reasons." :-)

All because of not loving his favorite radio mode, morse
code. :-)

The gist of what the PCTAs in here rant about is the attempts
to demonize all the NCTAs for not believing as they do. They
can't make a good case to keep the code test so they resort
to personal insults, pejoratives againt the NCTAs. NOT a good
case to present for retaining any code test...or even to show
the amateur radio hobby in a good light.

Yup. Cecil hasn't posted here in eons. That means your apology to
Cecil is ancient history.

> Cecil's been the topic of discussion here for several weeks...Including
> YOUR suggestion that you might "...pull a Cecil..."

Indeed. But I don't recall Cecil commenting.

> And I've already shown where I got my attributions wrong with Hans' story

>
> An error. I admitted it and apologized fror it.

It wasn't the attributions that you should apologize for. It was the
accusation of plagiarism.

What the what???

Your apology was for an incorrect attribution, but should have been
for a false accusation of plagiarism.

> The intended recipient thought it was appropriate and sincere.

He took what he could get knowing that's as good as it was likely to
get.

No, it's not.

Within the last 7 days you've made numerous assertions of fact that were patently false when you made them, and that error pointed out by more than one person.

You have failed to acknowledge your errors or apologize for YOUR false accusations.

Sooooooooo....Brian P. Burke is and remains an unashamed liar.

>> >> So far you've not been able to delineate ANY facts, Brain.

Well, that's how it goes. :-)

Mike Coslo is mighty upset about talking back to CAPman. Mike
thinks that's not "grown up" or something. PCTA extras have to
stick together...even if they are stuck together with wild and Crazy
glue. :-)

The gunnery nurse has several times accused me of "plagiarism"
in articles I wrote for Ham Radio magazine. Never had any sort
of apology from him about that. HR had a whole staff of editors
who were licensed radio amateurs...and were quite aware of the
plagiarism possibilities and violations of copyright that could occur
in publishing. So far I've never had any "challenges" on such alleged
plagiarism except from da bigg CAPman (Pilot in Command!). He
must think he is a Cancun judge...the "court of last resort." :-)

I think one MUST be federally tested in morse code and have a
federal amateur merit badge callsign in order to post anything in
here. :-)

A 2N2222 is a legacy NPN transistor that dates back to the
beginning of the 1970s as a MIL part (in the small metal can).
Several variants survive today, including a TO-92 case plastic
variety from ST (Germany). It's about 9 cents in quantity from
Mouser or Allied. [price may vary slightly so check their
on-line catalogs]

I do believe that is the NPN bipolar used in one of the "Tuna-Tin
Two" variants. :-) Not exactly a world-shaking full gallon
output. bwahahahahahahahahahahahahahahahahah.

Sorry about the snicker. I got like totatlly underwhelmed by
the "qualified medical professional" venturing outside of his
bedpan expertise into tuna can expertise.

The scanner-printer-photo-edit process can be very useful to
anyone doing one-of-a-kind PCB projects, regardless of the
application. That includes preparing an etch resist mask for
1:1 scale using prepped photosensitive board stock.

For some good buys on either "raw" PCB stock or the positive sensitized variety, I'd investigate Circuit-Specialists in AZ or Ocean State Electronics in RI or even Marlin P Jones in FL. All have both website and paper catalogs.

For "prototype board" 3-hole-pad (one side) that can hold up to 30 DIPs, Circuit-Specialists' PC-407912 is quite good with 4 1/2" x 6 1/2" size, 44-pin edge connector on one end. Made by "Syntax" and similar to the Douglas Electronics 11-DE series. Wiring can be done with Kynar or Teflon insulated #24 or #26 solid at frequencies up to about 60 MHz digital. [I have a bulk buy quantity of MIL-E-16878 teflon wire that I use but heavy Kynar wire-wrap solid will work for that]

Actually, I *can* get "on the air" with a legacy NPN such as a '2222 or even a 2N3904 but prefer a later design with a higher cutoff frequency and higher power dissipation. CAPman doesn't understand that his ham license would cause a beef if he tried to "get on the air" OFF the ham bands. Mine does and also enables a bit of extra income. Tsk. He would NOT be legal either way trying to use his ham license for that! :-)

Back to GRAPH PAPER: A few years ago some website was offering "free" JPGs of K&E graph paper forms (they have many dozens of varieties). That site was unaware of (or flaunted) the Copyright laws and pulled the stuff to avoid LEGAL problems. :-) There's nothing to stop an individual from copying their own forms for their own private use...again, a good photo scanner is a must there but those cost under $150 at worst-buy electronics stores. Nobody is going to crawl through the computer and flash their shiny Raddio Kopp badges for doing so...although some try to do that. They have NO power of arrest. Most are products of some kind of arrested development. :-)

YOUR license does not allow you to "get on the air", period, without a
valid STATION license that SPECIFIES frequency, mode power, operating hours,

etc.

Mine doesn't say that.

Sucks to be you, Lennie.

Yeah, I fire up Mathcad, type in the data points, tell it to solve for
the function if I need it and hit the "print" button . . or I can
numerically solve indefinite integrals between specific limits and
find the areas under the curve too then hit the print button.

I've been called much worse than that. One fine fellow even threatened
to kill me. Before I could do anything about it, he was arrested and
jailed on some other charges, so an offhand threat - and a real one to
boot - wasn't going to add a whole lot more time to his sentence.

Had a friend in Junior High school. Short fellow, pretty funny guy. The guys in our group started calling him "Stub", referring to a particular body part. That irritated the heck out of him. He'd yell at them, tell 'em to knock it off. This was getting pretty stressful for the guy. Once he even got into a fight with another kid over being called "Stub". As one of the few people in the group that didn't call him that, he often talked with me about how frustrated he was. I gave what advice I could, but he found it lacking. Finally one day a new kid shows up, and we're doing introductions. When I introduced him to the new guy in front of everyone by his proper name, (Tim) he just went up to the new guy, shook his hand, and said "Aww F**K it, just call me Stub!" Name went away immediately.

> You can call me anything...but that would be incorrect. :-)

HAH! Good segue. 8^)

> You can't figure out from my "signature" what a preferred short form
> given name of mine should be? Tsk.

ORG? Just kidding! Okay, talk to you later, Len.

>>
>> Not in computer-modem communications venues. :-)
>
> Have to say I can't understand that one.

Tsk. After 20 years of computer-modem communications (on BBSs
as well as the Internet), there are still individuals who jump on in
with some ranting on someone or something, daring all to "challenge"
them about that. Funny as well as pathetic.

>> Thank you Mike Tyson. [excellent taste? :-)]
>
> Tyson foods?

Tyson the ear-biter. :-)

>> Stop objecting to personal insults? Stop objecting to insulting remarks
>> about spouses? Stop objecting to manufactured lies he makes about
>> my past?
>
>Now your getting it!

Ah, so score one for "rules" favoring the PCTA extras!

They are allowed to DO anything, SAY anything...but no one else
should be posting?

Gosh, you sure know how to wall off the playing field only for your
team...

>> In general, the PCTA comments on retention of the code test are
>> (and were long ago) repetitive, puerile, and invalid. All any of them
>> can do is resort to is pejorating any outspoken NCTA.
>
> Exactly as are the arguments against it. THere are no new arguments, no

>new material. It's so old.

There's no reasoning with emotional belief systems...such as the
PCTA's insistence that all who come after must jump through the
same hoops they had to when younger.

I agree it's "old." Morse code was first used in 1844. 160 years ago.
Quite OLD. :-)

>> We are all big boys now. You can call them pissing contests
>> rather than use the cutesy euphemisms.
>
> Michael Powell's gonna get us! ;^)

For what? Failure to gratuitously use cutesy euphemisms? :-)

Mikey Powell is already getting in more hot water that he can't
swim in very well. Try reading the business section of your paper
beyond the Howard Stern BS pieces. FCC and Powell have been
prominent in the bigger papers for other than broadcasting.

>> Pissing contests with nursie are NOT any "battle of wits." :-)
>>
>>> Its the complaints and defenses I don't get.

You aren't controversial enough, try too hard to work both sides of
the aisle. Align yourself with one or the other side and you will
get MANY complaints! :-)

> I've been called much worse than that. One fine fellow even threatened
>to kill me. Before I could do anything about it, he was arrested and
>jailed on some other charges, so an offhand threat - and a real one to
>boot - wasn't going to add a whole lot more time to his sentence.

Tsk. Offing him would have freed up some taxpayer monies, no?

>> Do you LIKE that sort of thing?
>
> Life in the jungle, sir! 8^)

No problem in here. Bunch of snarling PCTA pussiecats. :-)

Bunch of wussies here compared to other newsgroups or the
nonsense that went on in some of the BBSs before Internet.

>>> Just a habit of mine to not speak ill of the dead.
>>
>> Feel free to say nice things about Adolph Hitler, Joseph Stalin, Ted
>> Bundy. They are all dead. :-)

Okay, I'm still waiting for those "nice things" about that trio.

Should I name some more? :-)

>> Tsk. You mistake persistence for obsession. :-)
>
>And many obsessed people just think they are persistent. Null.

You got a null-null score...try a remedial class next summer.

Let me know when there's a federal requirement to run for some
political office in order to talk about political affairs, OK?

Since when did the First Amendment get altered? Every one who
is a USA citizen has the Right to communicate with their
government...about any existing laws and potential, pending laws.

>> Morse code was a boon to landline communications two centuries

>
> Thanks for another story. I really do enjoy them (and I'm not being
>sarcastic.

Tsk. NOT a "story." Documented fact.

>>> Your "Why" would indicate that you simply aren't interested in the ARS
>>>to the level that you would take the effort to get the license.
>>
>> Tsk. I don't "owe" anyone a reason for my doing anything. :-)
>
> Of course not. But I must admit that I find that a rather odd response
>to my statement.

Tsk. You are too into ham radio as a personal thing. You must think
that unlicensed folks (unlicensed in the amateur radio service, that is)

don't know anything about radio?

There are lots and lots of Parts to Title 47 C.F.R. From time to time all of them MUST be corrected, revised, brought up to date. "Radio" is still evolving, has existed only for 108 years. It has grown much since its infancy, changed considerably. No one Part of Title 47 can remain as-is forever, nor is amateur radio solely the provence of some olde-tyme hammes to use as their private playground.

>> Do you "owe" someone anything for talking about politics? Does one
>> HAVE to be IN politics to talk about it? :-)
>>
>> I'm not interested in joining any Archaic Radiotelegraphy Society.
>
> Right. Your why comes up that way. Just as I note above.

Tsk. I might, at some future date, get an amateur radio license. Or maybe not. [one can't get too specific in this bunch of anal-retentive prissy literalists, they think everything one says is some kind of Religious Vow taken before God!]

Why should I take the trouble to relearn morse code just for a chance to get a low-cost federal merit badge? I don't need to prove myself in anything to anyone on any endeavor.

>> You forget I HAVE a federal radio operator license and obtained it
>> long ago. :-) Not a big deal. Had to use it only two years after
>> getting that in 1956.

Tsk. I was into HF radio communications without ANY sort of license requirement from 1953 to 1956. Certainly not having any sort of requirement to learn or use morse code. Not once did that come up for the next half century of radio transmitting.

> Hehe, I was just about in diapers then! 8^)

Irrelevant.

> Why yes, I do! I have spent most of my career in computers, from the
>old IBM mainframes of the 70's to today's so called cutting edge PC's.
>Ended up making videos and doing photography in addition. So now I am
>interested in learning more about RF, yet don't want to go back to
>school. Here I is! Having a whale of a good time, learning all kinds of
>new stuff!

You've only just begun to learn.

Guaranteed you WON'T learn anything if you adopt a pose of being the Great (Amateur) Communicator because you are a code-tested extra in front of some long-time other-radio-service pros. Listen and learn...there is much to be gained by taking advantage of their knowledge...but be careful on HOW you act.

You have to realize that those older than you have ALREADY met
up with the braggarts and the insolents in life as well as having
gained an enormous amount of experience. They will KNOW when
you don't know something but are trying to pass yourself off as
something you are not. You get eaten alive in trying that.

>Had a friend in Junior High school. Short fellow, pretty funny guy. The
>guys in our group started calling him "Stub", referring to a particular
>body part. That irritated the heck out of him. He'd yell at them, tell
>'em to knock it off. This was getting pretty stressful for the guy. Once
>he even got into a fight with another kid over being called "Stub". As
>one of the few people in the group that didn't call him that, he often
>talked with me about how frustrated he was. I gave what advice I could,
>but he found it lacking. Finally one day a new kid shows up, and we're
>doing introductions. When I introduced him to the new guy in front of
>everyone by his proper name, (Tim) he just went up to the new guy, shook
>his hand, and said "Aww F**K it, just call me Stub!" Name went away
>immediately.

Nice tale, but life doesn't work that way all the time.

Those who do the name-calling don't get absolution from their sins
therefore they usually continue. They think they can "get away"
with anything they do.

The KKK is a good example of one group that not only liked to call
others whatever they wanted but also killed those that objected
to their actions too strongly.

Anything

Indeed, one of the more useless things in life is an insincere apology
and the person who delivers it.

Best of Luck.

Because they were nothing more than a mouthpiece for the left. No
point in tax dollars funding that.

>Please recall my recent aopolgy to Dee. And I apologized for the right
>thing.

I stand corrected...And I did too, Brain.

Unless you can prove otherwise?

We still have that "Steve doesn't admit errors or apologize" thing out
there.

When are you going to live up to your own rhetoric, Brain?

>> >It wasn't the attributions that you should apologize for. It was the
>> >accusation of plagiarism.
>
>Hello?

I guess it would be too much to ask you to go back and look at the thread
I made specifically FOR that purpose, Burke?

>> Within the last 7 days you've made numerous assertions of fact that
>were
>> patently false when you made them, and that error pointed out by more than
>one
>> person.
>
>You're in the liar mode again.

Nope.

YOU stated, hours AFTER I had done exactly that thing, that I never admit
mistakes nor did I apologize.

It's still out there, Brain.

Are you going to own up to it, or do we just let it drop on the chance
that we'll cross paths one day and settle up face-to-face?

>> >Sheesh! I said "No one." If I had known someone who could keep pace
>> >with your false accusations, I would have said who.

>>
>> The "such as" comment was not directed at "who" but at "what".
>
>Then you need to work on your presentation.

Nope.

You need to work on your character. You're still a lying loser.

Welp, I knew there had to be somebody far enough behind the curve to
still be using goofy old MS Paint. For *anything*.

Congratulations Sweetums, you win the annual Kill Bill Society "Last
of the Mohicans" award for 2004.

> With either
> Corel or Adobe photo edit programs you will find that one can

> for quick one-of-a-kind projects.

GROAN! I don't believe it, whatta bass-ackward, contorted heap of
nonsense.

And you're an "engineering professional" eh? As if.

Now let me explain the right way to do quickie one-off PCB and panel
layouts Sweetums: In the first place you don't use frigging bit maps
or any of the others of it's pixel-juggling junk for engineering work,
those are for touching up photos of Aunt Minnie's birthday party.

Real profesionals use vector-based graphics software which are
designed for engineering purposes. They're called CAD programs you
see. $100 at any decent computer store gets you 2-D TurboCAD which is
accurate to a millionth of an inch if one cares to get that anal about
locating holes in PCBs and it goes uphill from there. Or even better
dig up Felixcad LT which is a general purpose full-featured freeware
2D CAD program and dump it in.

I'll put it this way: By the time you've fiddled with your pencil, graph paper, scanner and collection of low-res dimensionally raunchy photo editing software just to get a drilling pattern I'll have a complete board layout including all the traces, lettering, donuts and the drilling pattern done 100% onscreen with a single program. All I have to do from there is load a sheet of vellum into the old LaserJet, specify the scale (100:1? No sweat.) and hit the "print" button. Or print just the hole pattern. Or just the traces and such for board burning purposes, etc.

Just for the hell of it I checked a couple of my layouts for dimensional errors with a Pratt & Whitney optical comparator set to 10:1 magnification and the worst error I could find was 0.003 inches over a six inch span. Which is better than the advertised limit of the printer accuracy. Try that with Paint.

>
>Welp, I knew there had to be somebody far enough behind the curve to
>still be using goofy old MS Paint. For *anything*.

tsk, tsk, tsk...

1. MS Paint is a freebie, came with Win95, transported through Win98 and onto XP.

2. I've used it to draw schematics, small to very big, using symbols also developed on Paint.

3. Resolution is at least 300 DPI which equates to +/- 0.003 inch.

4. The repeatable accuracy of dot-matrix printers such as either the HP 722c or HP PSC2110 is +/- 0.003 inch.

5. The accuracy of the printing process is greater than I can get using ordinary hobby-type hand tools.

6. You've got to remember this hobby radio work does NOT normally need Jo-block-checked accuracy. It is a HOBBY, not a working machine shop.

>Congratulations Sweetums, you win the annual Kill Bill Society "Last
>of the Mohicans" award for 2004.

Don't mess with the Mohicans, white man. :-)

Snarl at Microsoft all you want. Bill G. will chuckle in his mansion. :-)

>nonsense.

Tsk. You should have been over at Miccolis' shack, making those
state-of-the-art chassis into something looking "professional."

>And you're an "engineering professional" eh? As if.

You betcha. Everything from thin-film/thick-film (the first of the
SMD applications) to hand-painting lacquer resist for a very
quick turn-around without leaving the lab (one afternoon, start
to finish). I drew the line on compression-bonding of SAW
filter wires and left that to the thin/thick film tech who had more
experience with a micromanipulator and bonder. SAW filters
were aluminum film on quartz, about the size of fundamental
crystals in HF but were 56 to 63 MHz center frequency.

>Now let me explain the right way to do quickie one-off PCB and panel
>layouts Sweetums: In the first place you don't use frigging bit maps
>or any of the others of it's pixel-juggling junk for engineering work,
>those are for touching up photos of Aunt Minnie's birthday party.

Tsk, tsk, tsk. Did you feed your kiddies Gerber plot foods?
:-)

In the first place, you argumentative old snit, ham radio is a
HOBBY, not some profession.

As such, one has to approach homebrew projects from the hobby
standpoint...what tools are available, what processes can be
safely done at home, the experience of the hobbyist, all those
things.

Tsk. I've done L-band stripline layouts at 4:1 on rubylith for a
finished work about 10 inches long, had it photoreduced to full
scale complete with the touchups to black out blank spots for
spray etching on Duroid. Was needed to get the four
directional couplers on that board accurate. It was.

["L-band" is 1 to 2 GHz for you long-wavers of HF]

NO ONE NEEDS that kind of accuracy or QC for simple, loose
tolerance one-of-a-kind PC boards, milliameter scale overlays,

or small chassis drill guides. Try to stay focussed.

>Real profesionals use vector-based graphics software which are
>designed for engineering purposes. They're called CAD programs you
>see.

Spoken like an UNREAL professional who does NOT do regular
electronics engineering. :-)

Real pros will use anything that WORKS and costs the company
the least amount. Ham radio isn't involved in "company"
business.

Acronym-wise, you have to get them straight. "CAD" is
computer-assisted-DRAFTING now. "CAE" is computer-
assisted-ENGINEERING. "CAD" used to be general Design
stuff but that changed about a decade ago.

Got news for you, mechanical man. "Vectored" lines depend on
the plotter being used. If you look deep into the guts that make
them work you will find those are really DIGITAL with enough
temporary storage to make the picture elements ("pixels") of
high density. If you want REAL analog lines (which is what
"vectoring" originally meant), then you cut Rubylith...something
I did about 30 years ago.

>$100 at any decent computer store gets you 2-D TurboCAD which is
>accurate to a millionth of an inch if one cares to get that anal about
>locating holes in PCBs and it goes uphill from there.

YOU are the one getting anal about accuracy. :-)

For $100 anyone can download PCB software for FREE from
Express PC's website and order a couple of finished PCBs
with plated-thru vias or pads, foil both sides, if laid out with
their software.

>Or even better
>dig up Felixcad LT which is a general purpose full-featured freeware
>2D CAD program and dump it in.

Why go to all that trouble for some simple one-of-a-kind PCBs
which do NOT need exceptional tolerances...or meter scale
replacements...or small drill guides? MS Paint was in the Win95
bundle, Corel Photoshop was bundled with WP8, and Adobe
Photo House was bundled with Acrobat. I had an earlier Adobe
photo program bundled with the HP 722C. One uses what one
can.

>I'll put it this way: By the time you've fiddled with your pencil,
>graph paper, scanner and collection of low-res dimensionally raunchy

>specify the scale (100:1? No sweat.) and hit the "print" button. Or
>print just the hole pattern. Or just the traces and such for board
>burning purposes, etc.

"Raunchy photo editing software?" :-)

Is that a clue on what YOU use YOUR photo editing software for?
:-)

Don't have a laserjet printer...or a Gerber plotter...or have any
need for "100:1" scaling. I know of where I CAN get those
services...for nothing. Don't need them for hobby projects.

Hobby projects don't need esthetic perfection. Electrons don't
care about human esthetics. Plated-through pads and vias are
a convenience, not a necessity. Just enough pad for the solder
to create a physical wedge (in addition to making a good solder
joint) will do it. MG Chemicals has a good "green" overspray
conformal coating; can be ordered through Allied Radio. No
silkscreen reference designations for one-of-a-kinds needed if
you have the original drawings.

Manual PCB layouts are fine for not-dense boards. Autorouters
are a help and programs for plotting with 20-thousandths wide
traces and photo etch are a must. I don't try manual resist
patterns at that kind of density...but I do try a manual layout
BEFORE going either manual or programmed resist pattern.
Some of us are good at that sort of thing and some are not; I
am towards the good side. Having been an illustrator helps in
that regard.

>Just for the hell of it I checked a couple of my layouts for
>dimensional errors with a Pratt & Whitney optical comparator set to
>10:1 magnification and the worst error I could find was 0.003 inches
>over a six inch span. Which is better than the advertised limit of the
>printer accuracy. Try that with Paint.

What I actually tried was to draw a couple of dimensions (two
each of 5 inches) on a piece of vellum from a pad (Clearprint
No. 1000H-10, each pad 50 sheets 8 1/2 x 11 inches, got a
bunch of those from Staples long ago), run it through the Umax
digital scanner, then print it out. Did the same with Paint for a
second image, printed that out.

Lacking a Pratt & Whitney optical comparator (not exactly in
every ham shack or hobby workshop), I used an old single-piece
steel alloy scale and got the SAME dimensions. To be honest,
I didn't send the scale to NIST for precise calibration and I don't
have a set of Jo-blocks at home and no laser interferometer to
measure precise distances. Making simple punch marks by
naked eyeball (being near-sighted helps) for drilling by a B&D
variable-speed electric drill is what I normally do. :-) For PCBs

I use an old Dremel Moto-Tool in the old-style Dremel mini-drill press holder (there's a new model Dremel that works more like the standard drill press). A Powerstat is used to slow down the Dremel's speed to suit the work material (Superior Electric, comparable to the GR Variac, does the same function). The trick for hobby purposes and ordinary workshops is to allow for sloppy location of holes with slightly over-size ones and manuevering room.

Electrons, fields, and waves don't much give a snit what fancy instrument you use to make the supports or enclosures for their circuits. They don't care how much you make, how much you brag about income, job title, or ham class. You work by THEIR rules not by your shouting and snarling. Same for professional or amateur. Try to remember that.

> Tsk.

What's the matter, Len? (if you want to be called something other than Len, say so in clear direct language, please).

What I wrote about your behavior here is true. Anyone who reads rrap can see it. - you post off-topic more than anybody. Then you complain about others' off-topic posting. Double standard - it's OK for Len but not OK for others.

You also do more old-timer posting, too...
>
> I say enjoy the hobby.

Which one? I have several.

> I say don't try to force archaic, imaginary
> needs in testing for an amateur radio license just because some
> olde-tymers had to do it.

I don't. Not in any way. Never have.

You have formally requested that FCC institute an age requirement of 14 years to get any class of amateur radio license. You've argued that idea here, too, and accused VEs of fraud in the licensing of young children. Yet when challenged, you could not name even one single incident where the youth of an amateur radio operator was a factor in any sort of rules violation.

There has never been an age requirement for an amateur radio license in the USA - even in 1912. Canada had an age requirement, but dropped it as unnecessary.

After all, it was *you* who wrote:

"I've always had trouble with integrating "youngsters" in what is a primarily _adult_ skill/technique recreational activity."

http://groups.google.com/groups?selm=96090201290392%40mogur.com&output=gplain

So what it comes down to is that FCC should adopt new rules because *you* have a problem dealing with young people....

If anyone tries "to force archaic, imaginary needs in testing for an amateur radio license", it's *you*, Len.

> I say enjoy freedom.

I do, Len. With freedom comes responsibility, and the recognition of other people's freedoms.

For example, there's freedom of speech and freedom of the press, both of which are evident here on Usenet. Anybody with internet access can post their words to these newsgroups. No license required! You've exercised freedom to post on Usenet with great frequency and volume...

Yet you've also told others here to shut up simply because they disagreed with you. You say this to people who have *never* told you to shut up in any way, shape or form.

Sometimes you say it indirectly, but at least once you've come out and told someone to "shut the hell up". Which shows how you really feel about freedom:

it's fine for those who agree with you but not for others. Double standard.

> I say try to keep up with the technology.

Which technology? What does "try to keep up" really mean? Is it OK to use a design or components that are 5 years old? 10 years old? 20 years old? 30 years old? Where's the dividing line?

Does "keeping up with the technology" include using MS Paint to make "professional" PC boards?

Who decides that a particular technology is not to be used any more?

You criticize the homebrew radio projects of others, but have none of your own to show. Instead, you go on at length about a 20+ year old manufactured receiver, and how you bought it for cash. Do as Len says, not as Len does...

> I say the technology isn't restricted solely to what ARRL publishes.

I don't know anybody who says it is. ARRL publications are an excellent source of information, designs, and ideas, though.

> Is that "bad mentality?"

Not at all! But your behavior here doesn't match those words.

> Or would you rather everyone be subject
> to rule by the raddio kopps carrying dazzling bright kopp badges?

Who are they, Len? Can't be me - I'm not a "kopp" and I have no "badges".

> [that way you could get to push around others who don't agree
> with you and your opinions - which you call "facts"]

That's a pretty good description of what *you* try to do here, Len. Not me.

> Do I do "OT posting more than anybody?" No.

Yes, you do. Don't you ever read what you write?

Not that there's anything wrong with that!

The trouble is, you criticize others for doing exactly what *you* do, even though you do it more.

Do as Len says, not as Len does. Double standard.

> If I DO talk about old time (OT) subjects it is for a reason of
> explanation since I've DONE those things and have first-hand
> experience.

You also talk a lot about old-time stuff you have *not* done and were *not* a part of. Also off-topic stuff you have *not* done and were *not* a part of.

Not that there's anything wrong with that!

The trouble is, you criticize others for doing exactly what *you* do, even
though you do it more.

Do as Len says, not as Len does. Double standard.

Is it somehow OK to post off-topic if someone has done a thing, but not OK if
it wasn't a personal experience?

If so, why do you post about things you haven't personally experienced?

If not, what's *your* problem?

> I don't need "confirmation" from any "league"
> organization to "document" it. :-)

What does that mean?

>>>When that someone is part of the Lennie/Steve/Brian-William
>>>troika in *their* ongoing whizzing contest is much more amusing.

>>Agreed!

>>The denials are almost funny.

> No. Tragic.

You're as much a part of it, and cause of it, as the other two, Len.

Can't you deal with Steve, K4YZ? Do you need my help?

> The damp hankie slap on nursie's wrist isn't very
> good therapy, "doctor" Jimmie.

I'm not a doctor. And I prefer to be called "Jim" or "N2EY" or "Jim/N2EY" in
amateur radio discussions.

>>>>> Well, except to some who wish to turn this newsgroup into
>>>>> a quasi-private Chat Room involving their own desires and
>>>>> preferences..and to have them damn all others for not thinking
>>>>> and feeling as they do. [yourself excluded]

>>>> That's a pretty good summation of what *you* want from this newsgroup,

>
>>It's how he acts that makes the claims ring hollow. Perhaps it's time to
>>repost the "feldwebel" classic...

> Poor baby. Losing your "group leader" self-imposed title?

Not me, Len. You're the one telling people to "shut the hell up", and
determining what is and is not acceptable subject of discussion here.

>>>>> For the bleeding-heart imaginary sailors aboard, I won't cry
>>>>> great crocodile tears of a thousand-plus humans who perished
>>>>> on the Titanic in 1912. Nope.
>>
>>>> "Bleeding-heart imaginary sailors"? Who would that be?
>>>
>>>Yeah, what's with that?
>>>
>>Len's trying to cover up his gaffe of laughing at them.
>
> Tsk, tsk. I don't, have never "laughed" at innocent victims of
> anything.

Yes, you did.

When it was suggested that all would have survived if the Titanic had hit the iceberg head-on rather than trying to turn away, you laughed and made fun of the idea. Even though it has been validated by computer simulations, and by the actual experiences of the liner Niagara three days before Titanic sank - in the same ice field. (Niagara, an older and less-state-of-the-art liner, rammed into an iceberg, crumpling the bow and tossing everyone aboard about. The captain initially feared the worst and radio distress calls were sent out. But the damage was such that the distress calls were rescinded and Niagara made it to New York without the death or serious injury of any passengers).

> What you've just said above is a damned LIE, sweetums.

No, it isn't.

At worst, it might be a mistake.

But I don't think it is:

Why all the name calling, Len?

> What next? Little eptithets in some language your aren't familiar
> with?

Perhaps you would prefer that. But you won't get it from me, Len. You've already started, though, with the name-calling and such.

For years I've referred to you as "Len", "Mr. Anderson", or sometimes just "Anderson". Maybe a "Lennie" slipped in there 5-6 years ago, but not recently. I've even asked what you prefer to be called here. I'm still waiting for a clear answer.

> [nursie has the lock on cute Yiddish pejoratives, doesn't
> know squat about Yiddishers or Judaism]

How do you know that? Do you speak Yiddish? Are you Jewish?

> Maybe something
> choice in Italian? [you could use my neighbor, the Scicilian, in
> that regard...:-)]

I know a few good phrases in Italian. But I leave the ethnic/gender/religious
slur stuff to folks like you, Len.

btw, what is a "Scicilian" ?
>
>>>>> I'll just reflect that the subject

>>>> What possible significance does that have?

>>> And is that on topic for rrap? ;^)

>>;-) ;-)
>
> M'lord Hamme, what is the "significance" of discussing the Titanic
> disaster at all in an amateur radio policy newsgroup?

It's more significant than discussing military teletype communications in Japan
in the 1950s. Or property values in a Southern California housing development
over a 42 year period.
>
> Shouldn't you be taking that up before the House of Lords?

Sounds like you're telling me to shut up...

>>>Linda is quite quirky in a cute sort of way... or is that quite cute in
>>>a quirky sort of way?
>>
>>Very attractive, really. Not at the Jan Smithers level, of course.
>
> Tsk. Letting all your sexual fantasies hang out in public again?

You *do* want to be the moderator.

"quite cute in a quirky sort of way" is pretty tame stuff. Suitable for family
viewing, I'd say.

It was *you* who emailed a picture containing adult male nudity to me and some
others. Completely unsolicited and unwelcome.

>>>>>>Boeing doesn't test fly

>>Did you see the film clip? It's on the 'net at a few sites. Not the best
>>quality, but scary enough.

> Has Jimmie actually RIDDEN in a B-52?

No. Have you, Len?

What difference does it make to the discussion?

I've been inside a B-52, btw.

> Who cares? Jimmie never served his country in a military capacity,

Never claimed to. You don't see me in military newsgroups, telling soldiers how
to run the armed services.

> wouldn't have any need to ride a B-52 for any reason.

I think it would be fun.

>>>>> Not to worry. U.S. amateur radio regulations are Up To Date.

>>>> Yes, they are.

>>>Seems like it to me!

> "Yawningly OT." Hi hi. :-)
>
> The morsemanship test REMAINS and that suits Mr. "I serve my
> country in OTHER ways" Miccolis, the artist of the state, just
> dandy.

Where did I ever write "I serve my country in OTHER ways", Len?

>>>>> They still require all amateurs to test for beloved morse code
>>>>> cognition capability in order to have priveleges of operating
>>>>> below 30 MHz...in the ham bands.
>>
>>>> Why does that bother you so much?
>>
>>Notice how Len avoids the relevant questions...
>
> What is the "relevant question?" :-)

Why the morse code test bothers you so much.

> Oh, I see. You be da Lord Hamme-on-wry, de Lawgiver of what
> be relevant for all to follow! Beggin' me humble pardon, m'lord.

Just answer the question, please, Len.

>>>>> It seems that some amateurs
>>>>> bent on constantly re-living the past (in almost anything) think
>>>>> that morse code skill is still the epitome of "radio operation" in
>>>>> the year 2004.

>>>> Perhaps some do.

>>>> Many more think that a simple test of Morse code skill at a very basic
>>>> level is a worthwhile requirement for an amateur license.

>>>> Why does that bother you so much, Len?

Hmmm?

>>>>>Very "progressive." State of the Art.

>>>> Len, do you live in a "State Of The Art" house? Drive a "State Of The
>>>> Art" car? Wear "State Of The Art" clothes?

>>>> Is your computer "State Of The Art", complete with broadband connection?

>>> If we owns PC's, we isn't state of the art.

>>Roger that!

> Who had a "personal computer" in 1912? :-)

"You can not answer a question with another question"

>>>> Heck, the only HF radio equipment you've admitted to owning is over 20
>>>> years old. Definitely not "State Of The Art", yet you lecture others about
it.
>
> "Lecture?" :-)

Yes!

> Tsk, tsk, TSK! I have an R-70. Leo has an R-70. Both still work to
> specifications (which are quite good).

How do you know they still work to specifications? Have you run a full lab test on them? Put them in the environmental chamber and all the rest?

Or are you just guessing?

> Oh, yes, a couple of NCTAs mentioned it, so, according to m'lord hamme
> (on rye?) they are just snit. :-)

The only snit I see is from you, Len.

>>>Random though mode on:

>>>I have a 1987 Transciever. IC-745. Suits me just fine. All digital
>>>(excluding the necessary analog bits)

>>Mostly analog, really!

>>> Wow, even digital radios are getting old hat.

>>Yep.

> How so? Can't get any digital parts to "recycle?" :-)

Is recycling a bad thing, Len?

I like the old Yankee saying:

"Use it up
Wear it out
Make it do
Or do without"

Is that bad? Perhaps you subscribe to Our Ford's mantra "Ending is better than mending".

>>>"Why", the Grinch said as a smile lit his face, "Maybe for everything,
>>>everymode all has it's place."

>>Indeed.

> Children's story characters? More fantasy portrayed as "fact?"

A fable with a relevant moral. Didja know "Dr. Seuss" drew political cartoons before, during and after WW2?

>>>I have a chunk of galena setting on the shelf in front of me - maybe
>>>I'll make a cat's whisker detector and radio from it

>>Oatmeal boxes made of cardboard are still used. They have a plastic rim at
>>the top but they still make good coil forms

> Go for it, Mr. State of the Art! :-)

Who would that be, Len?

Is it OK to call you Len? If you want to be called something other than Len, say so in clear direct language, please.

Strange, hams talk weather all day (and all night) long but none of
them are required to be weathermen. After the weather, they start
talking about their gall bladders, but I doubt they are medical
professionals.

Pair of Docs.

He can probably marry, divorce, and condemn people when he's the
Captain of his Air Ship. Or is that Major?

> Got the silver wings with little laurel wreath around the star above
> the center shield! Maybe he had it gold plated to match USN
> wings? USAF wings are physically larger than USN wings. :-)

No doubt he's struttin' around about that. I used to get a kick out
of the CAP guys. They got to eat in the chow hall once a month like
real military. The Banty Roosters would loosly gather their gaggle of
follows and sort of march them out in the parking lot. Hi!

The mosquito squadron. Wrapped a bomb in rubber and with a low
altitude approach bounced it right into a bunker. Movies are great
stuff. I don't base my life around movies though.

My first computer. A COCO II with a whopping 16k ram. I swapped out
the chips, cut a trace and added a jumper: 64K whoohoo!

I had the first floppy drive around, too. Couldn't stand the tape
recorder.

Speaking of coil forms, I need to replace the coil on my hygain 18vs.
I want to use plastic water pipe or conduit, but I recall reading that
some of that stuff is somewhat conductive. Have you heard anything
about that?

I'm not sure I understand why HS is picking on Powell! The FCC was on
Stern's ass LONG before Powell got his job. It's probably a miracle that
Stern is still allowed on the air.

To believe the movie made of his life, he's come close many times to being
unemployed due to the FCC's pressure on the Stations.

Michael Powell was appointed under the Clinton administration *before*
his father became Secstate.

He was promoted to Chairman *after* his father was made Secretary of
State. The year that Junior was promoted was 2001.

I really don't have to. he was the one making all the noise, he still has yet to prove his allegations to be anything other than false accusations.

now, I have been a loyal listener of ARN for almost 15 years. I have seen them in the good times and currently in the lean times. I *KNOW* how much it costs to have a licensed copy of real producer (and it isn't cheap and costs yearly), and don't forget the long distance phone charges, the cost of utilities, computer time, not to mention that Mr. Pasternack is not getting 1 red cent in the way of a paycheck for this.

Now, I don't see where Dieter has any real evidence to backup his case. I happen to have a background in accounting (thank you Glendale Community College) and I have examined many balance sheets over the years in preparing taxes for others. From what I see of ARN, its a shoestring operation.

Now, I am not sure if Bill P. would mind, but I am of a mind to request information from him and "see for myself" if there are any irregularities (just to assuage any lingering doubts). If Dieter can find ANYTHING irregular in either the IRS filings or elsewhere relevant, fine. otherwise, he comes across as making noise to be making noise.

In the meantime, there are other, much more important, issues at hand (such as B-P-L).

It doesn't really matter who appointed him or when he was appointed. There
is a very LONG tradition of appointees being put in by friends and family so
even if he had been so appointed, it is totally irrelevant.

You can catch the -real-Pot Belly Radio Police and the Redneck Roundup
any week night on ham radio 3.860 LSB at 8:00 PM Eastern Time.
They call themselves the Eastern Patriot Net. A friend of mine e-mailed
me and said to have a listen. Sho enuf there they were! All paranoid and
goofy as the crazy old John Bircher Lady who sees commies under
her bed or your 85 yo Auntie who uncle John keeps in the granny
cottage attached to the house under medication. Last evening's topic was
alleged 1000 Russian troops somewhere in North Carolina on an
military airbase. (...no doubt the resident male NC redneck militia is
worried
about this because those cute young 19-23 yo Russians don't have
beer-bellies
and chain smoke like their current 'merkin boyfriends do and will likely
end up
marrying their girlfriends in the long run when they move here, get a
college
degree and leave them with 10 times more income than any militialoon
trailer
trash bozo ever will be able to do!) The other topic-of-the-evening was a
rambling *15 minute long rant* by their resident cukoo-bird from Michigan
who went on to say how Kerry and Bush report to the Queen of England and
the Rothschilds (..or was it the Pope? I forget which) turning the USA into
some kind of a Plantation with the Jews running things. (sounded as 3
sheets to the
wind as usual, so it's sometimes hard logic to follow you see) Also said
how the
Virgin Mary appears to somebody and tells him all the nasty things the NWO
has
in store for us like microchips in our buttocks, and in flu shots, and cans
of green
beans on the Dollar Store shelf, and in Gillette razors that activate a
tracking
RFID code when you walk by the cable TV box etc...etc...Oyvey Mama
Macree..!
So be sure to toon in. (they also mentioned 7.275 as a daytime freq) You
won't
be dissapointed, it's *more chock full* of rusty nuts and bolts than is
Auntie Filomena's
1987 Ford Crown Vic sitting in her driveway down the street that her
deceased
hubby got for oh-such-a-deal at the Municipal Equipment Auction 10 years
ago...

K1>From: Burt Fisher <k1oik@ccsnet.com>
K1>Subject: CW the final solution

K1>WHAT IS C W

K1>* It is a unique,intimate,concise and effective communications skill still
K1>employed throughout the world....(SNIP TO...)

K1>* It is an equalizer,negating age,speech impediments and dialectical
K1>differences;it provides for ready acceptance of youngsters in an
K1>adult enviornment.

I've always had trouble with integrating "youngsters" in what is a
primarily _adult_ skill/technique recreational activity. The
dialectical difference negation part is pure nonsense and far-liberal
pipedreaming. RTTY, packet, computer can negate age, speech
impediments, _and_ hearing loss; computers with artificial speech

adapters are used by some blind persons.

SNIP AND UNQUOTE

"...The dialectial difference negation part is pure nonesense and
far-liberal pipedreaming."

BBBWWWHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHA ! ! !

Stupid stuff like Lennie's post is what happens when any PUTZ with the
bucks can buy a computer and subscribe to an ISP.

Absolutely proof positive that Leonard H. Anderson has absolutely NO idea
of what he's talking about, and that LACK of knowledge comes DIRECTLY from a
lack of practical experience.

And the "...trouble with integrating "youngsters" line...Proof (to me)
that Lennie's biggest fear of Amateur Radio is getting on the air and being
"shown up" by some "kid" who can't even shave yet!

As always, Lennie's own words are his own un-doing....

Thanks, Jim...

Hmmmmmmmmmmmmmmmm.....

This past 10 days alone you've been caught in no frewer than five misrepresentations of fact.

You've been asked to acknowledge you errors and apologize (something you demand of others, even when you're not the aggrieved party), yet you refuse to do so.

Then you have the cajones to accuse others of lying and of "bizzare posting".

We'll discuss this at Dayton, Brain.

See you there.

I think it does matter, Dee. There have been a number of wild
accusations leveled, indicating that Michael Powell was put on the
payroll by the Bush administration and that nepotism was in play. That
turns out not to have been the case. Michael Powell's father was not in
government when he was appointed to the Commission. While I don't happen
to think Mr. Powell has much of an idea what he his doing, such happens

fairly frequently in the FCC.

The same is true in the Foreign Service. I've seen a number of politically appointed ambassadors. Some have handled the job admirably, a case in point being Ambassador Rockwell A. Schnabel in Finland during the 1980's. Some of the political appointee ambassadors have been just awful.
At least in the Foreign Service, there is always a good number two, the Deputy Chief of Mission. He or she is always a career diplomat.

You are right, of course, that people need to get their facts straight before slinging accusations and that we do need competent people somewhere in the chain. And that is exactly why the subordinate positions fall under the career civil service type of setup.

My point was intended to be that even if it was nepotism, that it is nothing new in the political appointment arena and that there is nothing to get upset about from that perspective even if it had been true. Appointees serve at the pleasure of the one making the appointment. They may be carried over from a previous administration if the new administration has no "favors" to pay out and they don't get on the wrong side of the new administration.

And why is nepostim any worse than appointing a friend? That happens even more often than nepostim for appointed positions. Why is nepostism worse than appointing someone because the administration "owes them a favor?" This last is SOP.

The day in, day out real work gets done by the career civil servants.

Dee D. Flint, N8UZE

> disaster even and the start of the first radio agency in the U.S.
> began considerably before the infamous sinking]

There were more than a dozen "wireless" bills before Congress in the two years preceding April 1912. All failed to be enacted. There was no urgency to enacting US wireless regulation at all. Then the Titanic sinking and the resulting investigations led to quick govt. action.

>>And it was because of the Titanic disaster that amateurs were limited to
>>"200
>>meters and down" and 1 kW input to their transmitters. Those limitations

"hacking on the services of commercial telegraph providers"?

Nope.

Amateur radio message handling of those days did not "hack" anyone else's facilities. Nor was it done for money.

> [see the details on the
> league's web site and in other published works by them]

Try actually reading them yourself, Len.

> ARRL did not spring into national prominence until AFTER World
> War 1, at least 8 years AFTER the Titanic sinking.

Wrong again, Len!

The ARRL and its magazine QST were "nationally prominent" before WW1. That's a documented fact. The League and amateur radio all but disappeared during WW1, then were reorganized soon after Armistice Day.

> Even so, the
> league was very busy with competition from OTHER wannabe
> national amateur organizations.

Such as?

> Note: The Radio Club of America
> began 5 years before the creation of the little New England club,
> and "RCA" (as they call themselves) is still in existance.

The Radio Club of America exists as a small organization today. It is not devoted entirely or even seriously to amateur radio. It's a tiny shadow of what it once was.

One of the most influential of the early wireless organizations was the Wireless Association of Pennsylvania. Two of its organizers, Charles Stewart and David Rittenhouse, defended the interests of amateurs in 1910, 1911, and 1912. For example, it is because of their efforts that attempts to require the licensing of *receivers* were not successful.

>>Had there been no Titanic or similar disaster, it's very probable that the
>>loose state of radio regulatory affairs would have continued until the
>>outbreak of WW1.
>
> Tsk. World War One (in Europe) began in 1914. The ARRL was
> created in 1914. :-)

And the US did not get involved until 1917.

>>And it's also very possible that without the Titanic disaster, amateur radio
>>would not exist today, or even after WW1.

> Yes, yes, "The Old Man" Went To Washington To Save Ham Radio!
> AFTER the end of World War 1. Six years AFTER the Titanic
> sinking.

You can't deal with a hypothetical situation.

>>Perhaps that's why Len gets so worked up over mention of the Titanic.
>
> Tsk. Here begins Rev. Jim's "fire and brimstone" demonizing. :-)
>
> Noooooo. The Titanic sank in 1912. That is NINETY-TWO YEARS
> AGO.

Why are you shouting, Len? You must be very upset.
>
>>Or perhaps it's the fact that the rescue was effected by Morse Code used on
>>radio that gets Len so upset.
>
> Tsk. Way back then (92 years ago) ANYONE using radio for
> communications HAD TO use on-off keying of some kind.

Fessenden and his workers didn't "HAVE TO"...

Reginald A. Fessenden was using amplitude-modulated voice radio almost a dozen years before the Titanic sank. By November 1906 he had two-way transatlantic *voice* radio communication working on a regular basis. Your historic references probably mention Fessenden, too. Look him up.

> 92 years later, hardly anyone (except for a few amateurs, a minority)
> use on-off keying communications modes.

So what? If that fact has any significance it all, it points to the need for testing knowledge of those "on-off keying communications modes" for an amateur license.

Also, repeated surveys and polls of today's radio amateurs show that, of those who operate on the HF amateur bands, a *majority* use Morse Code at least some of the time.

>>Len laughed at the disaster when I wrote that hitting the iceberg head-on
>>would have probably saved all aboard. And he refuses to show any respect
>>for those who perished.

> Tsk. Sneaky implied pejorative. :-)

> I don't claim to be a mariner at all

Nor do I.

> despite having crossed the Atlantic
> and Pacific twice by ship and gone sailing on a friend's 35-foot
> something or other (forget the class of sailboat), all as a passenger.

Then why do you mention it?

> I WILL laugh and laugh at the thought of "expert seamanship" involving
> "hitting an iceberg (or anything else) head-on in order to save it"!

Then you're laughing at the expert mariners who have said doing so would have saved Titanic. And you're laughing at what happened to the liner Niagara, April 11, 1912.

IOW, you're laughing at reality.

> Ain't nobody going to get "respect" for stating such alleged "safety
> measures" to stay afloat at sea as "going head-on into a berg."

Tell it to the experts who say it was a better choice than sinking the ship.

> Defies common sense. :-)

So does the theory of relativity. But it's true.

> I don't show any "respect" for ANYONE stating that "hitting <anything>
> head-on will save a ship."

In the case of Titanic, it's true.

>>It sure seems to. You're obsessed by it.
>
> Tsk. Persistence is not obsession.

You're obsessed.

> I'm not in here every day. :-)

Nor am I. But that's not the point.

>>>> I haven't gotten an amateur radio license yet. :-)

>>That's a good thing!

> Why is that "good?"

Because it's better that your behavior is confined here, rather than on the amateur bands.

>>Besides, on January 19, 2000, you told us you were going for Extra "right
>>out of the box".
>
> Did I do that in church?

No - right here.

> Tsk. I've seen what Being An Extra makes of some amateurs and
> such is not for me.

Then whay are you here?

> I'm of the opinion that radio and electronics is terribly fascinating,
> interesting, and makes an enjoyable field of both avocation and
> occupation. To me. So much so that I made a major shift in my
> formal education long ago, changing from illustration art to

> electronics engineering. That despite a natural talent in
> illustration and some prior work experience as an illustrator.

How is that at all relevant to amateur radio policy?

> That was personally successful, not the "lackluster career" you
> stated.

People's standards of "success" vary.

> I do electronics hobby work in my home workshop to please me,

Me too!

> not some raddio kopps demanding a certain formal Way To Do
> Things, nor worshipping the old traditional ways as they were
> done long ago, trying to re-enact a past that was before I was
> born. The future happens right after now and I keep looking forward
> to new things, to enjoy them.

Yet you still have an old R-70 receiver, and use software kluges like MS Paint
to do PC board layouts when much newer, better methods exist.

>>What person are you referring to, Len?
>
> Whomever. :-)

Can't call people by name, I see.

>>Note how Len avoids the question about why the code test bothers him so
>much.

> It doesn't "bother me." :-)

Sure it does. Whenever anyone says anything good about the test - or even Morse
Code itself - you come out swinging with shouting and insults.

> You've long since run out of valid arguments to retain the U.S. amateur
> radio regulation requiring passing a code cognition test for operating
> privileges in amateur bands below 30 MHz.

In *your* opinion. Others (including FCC) disagree.

> You've resorted to the
> usual PCTA demonizing of any NCTA who dares to talk back to a
> member of the Archaic Radiotelegraphy Society (ARS).

"Demonizing"? How? All I do is point out your mistakes and offer commentary on
your behavior here. Is that not allowed?

It seems that you take *any* differing opinion, or facts that you don't like,
as personal insults to you.

> As predicted, you've gotten all emotional and upset about being
> (in the slightest) corrected on certain (actual) facts (not your
> opinions although you use fact-opinion interchangeably).

Not me, Len. I'm not the one making up nicknames, shouting, etc. I leave that stuff to you.

> You want to keep the ARS in your version of pure, pristine, and
> prissy-literally

What in the world does that mean?

> and don't (now) hesitate to pejorate others and
> make some mild perjerous remarks to "reinforce" your opinions
> (which you call "facts").

"Peforate others and make some mild perjerous remarks"?

What *are* you talking about?

>>Besides, it wouldn't matter what sort of homebrew rig I produced - Len would
>>have lots of disparaging things to say about it.

> Tsk. You took your rig's photo. You put it on an AOL home page.

Is that wrong? Is it somehow not allowed?

> One photo.

There are more out there. You haven't found them yet, have you?

>Doesn't go into much detail.

Why should it? Your reaction is predictable regardless of the detail provided.

> Six and a half cabinet-less
> chassis with lots of vacuum tubes.

Six and a half chassis? Count again.

And what's the obsession with cabinets?

> No schematics. No descriptions
> in detail that you claim visitors are astounded about. :-)

I've already described that rig elsewhere. I've outlined its basic principle here, but you couldn't even solve the heterodyne problem, so it's pointless for me to go further.

>>What homebrew HF radio transceivers have *you* produced since the mid
>>1990s, Len, using only your own time and resources?

> No transceivers on HF. :-)

Exactly. You criticize others, but have nothing to show of your own work.

> As usual, you've wasted my time.

How? You choose to read the postings here, and you choose to answer.

Jim, even you can't rewrite history well enough to lend credence to that
statement.

The "war to end all wars" began in the summer of 1914 (August, IIRC).

The first issue of QST was published late in 1914 (December, IIRC).

So much for "nationally prominent" before WW1.

Amateur Radio Newsline(tm) Report 1420 - October 29, 2004

Amateur Radio Newsline report number 1419 with a release date of Friday, October 29, 2004 to follow in 5-4-3-2-1.

The following is a Q-S-T.

The ARRL Executive Committee meets to discus the future of ham radio in the U-S-A and the next Solar Minimum may be a lot closer than you think. Find out more on Amateur Radio Newsline report number 1420 coming your way right now.

RESTRUCTURING: ARRL EC MEETS TO DISCUSS BANDWIDTH AND BPL

A draft of a petition to the FCC dealing with bandwidth regulation and the latest on the B-P-L front dominated a recent meeting of the ARRL Executive Committee held October 16 in Dallas, Texas. Amateur Radio Newsline's Bruce Tennant, K6PZW, takes an in-depth look at what was discussed:

--

At the Texas gathering, ARRL Executive Committee -- better known as the E C -- devoted much of its fall session to a discussion of comments received on the League's draft FCC petition seeking regulation of subbands by bandwidth rather than by emission mode. The E C also authorized the filing of a Petition for Reconsideration in response to the Broadband over Powerline Report and Order in ET Docket 04-37, which the FCC adopted October 14. But the E C acknowledges that the drafting and filing the petition must await release of the actual Report and Order, which should happen in a few weeks. It did however authorize ARRL General Counsel Chris Imlay, W3KD, to prepare to pursue other available remedies regarding procedural and substantive defects in the B-P-L proceeding.

Responding to a synopsis of the bandwidth petition and proposed rule changes posted on the ARRL Web site, several hundred League members and others in the ham radio community offered comments and suggestions. The good news says ARRL Chief Executive Officer David Sumner, K1ZZ, is that the

Executive Committee found considerable support for the concept of the petition. It also was happy to see some constructive suggestions to reduce both the impact of the changes on current amateur operations, as well as possible unintended consequences.

By way of background, earlier this year, the Executive Committee decided to make a synopsis and explanation of the petition available before filing it with the FCC. At the Dallas meeting, the E C agreed to submit several recommended amendments to the proposed rules changes to the ARRL Board of Directors for its consideration when they meet in January. These include such items as retention of rules permitting automatically controlled digital stations including packet and other digital modes in narrow H F subbands. The draft petition had proposed dropping these provisions.

Also in the digital domain the E C addressed a rule prohibiting so-called semi-automatic digital operation on frequencies below 28 MHz where phone is permitted. This addressed a concern that ''robot'' digital stations might take over the phone bands. And a segment for 3 kHz bandwidth with no phone emissions at 10.135 to 10.150 MHz to accommodate existing and planned digital operations was included.

Another item adopted was the deletion of the word "continuous" from the description of test transmissions authorized on most frequencies above 51 MHz. Lastly is simplification of proposed changes to Part 97.309 of the Commission rules. This, to clarify that FCC-licensed amateur stations may use any published digital code as long as other rules are observed.

The Leagues Dave Sumner emphasized that the recommendations address major issues raised to date but are not necessarily the last word on the draft petition.

For the Amateur Radio Newsline, I'm Bruce Tennant, K6PZW, in Los Angeles.

--

The ARRL's bandwidth proposals take into account the League's prior ''Novice refarming'' petition to expand some High Frequency phone bands--included in the ''omnibus'' FCC Notice of Proposed Rule Making in WT Docket 04-140. (ARRL)

**

RESTRUCTURING: UK HAMS GET EXPANDED 40 METER PRIVILEGES

Hams in the U-K have been granted expanded privileges on the 40 meter band. Jeremy Boot, G4NJH, is in Nottingham, England, with more:

--

Ofcom and the Radio Society of Great Britain are pleased to announce that all necessary procedures required for early access to the 7.1 to 7.2MHz spectrum for all UK radio amateurs have been finalized and that access is allowed from 01.00 UTC on Sunday 31st October 2004. Early access is granted on a Secondary (non-interference) basis using a maximum of 26dBW (400 watts) PEP.

Notices of Variation for the U.K. Foundation, Intermediate and Full licenses have been published on the Ofcom website at http://tinyurl.com/4tuud. It is recommended that for the time being only voice and Morse code modes are used between 7.1 and 7.2MHz. Band planning issues on MHz will be kept under regular review and will be dependent on the number of administrations granting early access to this band prior to full Primary access on 29th March 2009.

Jeremy Boot, G4NJH.

--

Thanks Jeremy. (GB2RS)

**

RESTRUCTURING: AUSTRALIA LOOKS AR VOIP RULES

The Australian Communications Authority -- the A-C-A -- says that it is reviewing telecommunications regulations to cover fast-emerging voice over Internet protocol services. In a discussion paper released about a week and a half ago, the A-C-A says that it aims to identify any regulatory challenges resulting from the increased availability of VoIP services and recommend to the government how those challenges might be met. What affect any changes might have to ham radio VoIP interconnects in Australia is to early to assess at this time. (WIA News)

**

THE FUTURE: SCIENTISTS PREDICT EARLY SOLAR MINIMUM

And some possible god news for hams tired of the rather poor High Frequency band conditions these days. It comes from the GB2RS News Service which says that American physicist David Hathaway believes that the next solar minimum could arrive sooner than previously predicted.

GB2RS News quotes on an article on the 'Science at NASA' website. It predicts that the next solar minimum could occur in late 2006. That's about a year earlier than previously thought

Dr. Hathaway bases his prediction on data from the last eight solar cycles, which show that solar minimum follows the first sunspot-free day on the sun by 34 months. In this solar cycle, the first spotless day was on 28th January this year and more recently, on 11th and 12th October, there were two more spotless days.

Hathaway goes on to state that the next solar maximum might also come early. He is quoted as saying that solar activity intensifies rapidly after solar minimum. That in recent cycles, the Solar Max has followed Solar Minimum by just four years. If that is the case, the next solar maximum could be not all that far away in 2010 and a Solar Max is good news for D-Xing. (GB2RS)

ENFORCEMENT: CB AMP SALE BRINGS $7000 FINE

A North Jackson, Ohio equipment retailer has been dinged with a heavy fine. This for allegedly selling those illegal 11 meter amplifiers that the C-B crowd calls footwarmers.

The noted violations involve Paladen Communications sale of external Citizens Band radio frequency power amplifiers. In it's October 21st Forfeiture Order the FCC alleges that Paladen, which does business as the CB Shop, did willfully and repeatedly violate Section 302(b) of the Communications Act of 1934 and Sections 2.815(b) and 2.815(c) of the Commission's Rules by making these units available to the general public.

Paladen was issued the $7,000 fine back on May 27th. The FCC says the company never responded to the notice. Its now been given 30 days to pay or face collection proceedings. (FCC)

**

ENFORCEMENT: CB OPERATOR FINED $10,000 FOR UNLICENSED OPERATION

And using an illegal C-B amplifier will cost a Washington state operator some really big bucks. This as the FCC fines Robert A. Spiry of Tacoma 10,000 for what the FCC say was operating a radio station without Commission authorization. Amateur Radio Newsline's Norm Seeley, KI7UP, has the details:

--

In its letter to Robert A. Spiry, the FCC claims that it found the amplifier as part of a follow-up investigation. This, after receiving numerous complaints from Spiry's neighbors.

On March 13th, April 2nd, October 29th and November 5th of 2002, agents from the Commission's Seattle, Washington Field Office concluded that the interference resulted from 11 meter transmissions originating from Spiry's residence and from his mobile station in his vehicle. During station inspections conducted on April 2nd and November 5th, 2002, the Seattle Office agents determined that Spiry was operating transmitters that were not FCC certified and that he was operating with a linear amplifier attached to his CB radio transmitter.

Spiry was advised that his use of unauthorized and non-certified equipment voided his blanket authority to operate his CB station. Nevertheless, the FCC says that he continued to operate the unauthorized equipment at the expense of his blanket authorization to operate his CB radio station.

On December 30th, 2002, the Seattle Office issued a Notice of Apparent Liability for Monetary Forfeiture in the amount of $10,000 to Spiry. In other words, a $10,000 fine.

In his January 15, 2003 response Spiry did not dispute the facts that lead to the fine. Instead he stated that he had ceased CB radio transmissions and had obtained an amateur radio license. The FCC database lists him as holding a Technician class license with the call sign KD7TRB. He also claimed to have removed his CB radio antenna and asserted that he was unaware that the amount of the forfeiture could be so high. He told the FCC that he was unable to pay that amount.

But in affirming the fine the FCC refers Spiry to Section 301 of the Communications Act. It says that no person shall use or operate any apparatus for the transmission of energy or communications or signals by radio within the United States without a proper license. The FCC says that Spiry's

2002 operation of his CB radio station with transmitters that were not FCC certified and use of a linear amplifier constitutes repeated violations. It also notes that his taking down the C-B antenna and getting a ham radio ticket are not sufficient actions to negate the punishment for the original offenses.

The FCC says that Robert Spiry has not provided it with adequate financial information from which to determine his ability to pay the forfeiture. Based on this lack of information cancellation or reduction of the $10,000 fine is not warranted and that it stands as is.

For the Amateur Radio Newsline, Norm Seeley, KI7UP, Scottsdale, Arizona.

--

Spiry was given the usual 30 days to pay. If he fails to do so the FCC says that the matter may be turned over to the Department of Justice for further action. (FCC)

**

ENFORCEMENT: BROADCASTER FINED

The FCC has also issued an $8000 monetary forfeiture to Crown Communication, Inc. Cowner is the owner of an antenna structure in Hobbs, New Mexico. The FCC says that the fine is for willful and repeated violation of Section 17.50 of the Commission's Rules involving Crown's failure to maintain good visibility of the tower. The situation dates back to August 13, 2002, when an agent from the Denver Office inspected antenna structure and observed that unpainted cables attached to it precluded good visibility . (FCC)

**

ENFORCEMENT: NO LICENSE - STAY OFF THE AIR

The FCC has warned an unlicensed operator to stay off the air or face some heavy consequences. This, in a September 30th letter to Travis Lee Dameron of Stuarts Draft, Virginia.

In its warning to Dameron the FCC says that it has information indicating that he has been operating radio equipment without a license on the Two Meter Amateur Radio Band. It tells him that transmitting without a license is a violation of Section 301 of the Communications Act and will subject him to fine or imprisonment, as well as seizure of any non-certified radio transmitting equipment he may have in his possession.

Dameron was also requested to call the FCC's Riley Hollingsworth to discuss the matter. If Dameron fails to stay off the air, the fine he could face would range from $7,500 to $10,000. (FCC)

**

RADIO RULES: FRAUDULENT STATION APPLICATIONS FILED WITH FCC

Bob Gonsett's CGC Communicator reports that a number of fraudulent Form 301 applications have been filed with the FCC this month. CGC says that the agency has even accepted for filing a number of these fake applications, and has assigned them file numbers.

One application in question was for a conventional, non-grandfathered Class B FM station. The petitioner was asking for a transmitter power level of 105 kilowatts E-R-P. This, in a Class B zone where only 50 kilowatts is allowed without a waiver request. And says CGC, there was no waiver request.

CGC adds that it appears as if the Commission is not screening these incoming Form 301 applications. This, even when there are blatant defects in some. (CGC)

**

NAMES IN THE NEWS: MOLLY SCHREIBER DEPARTS AES

Some names in the news. First is Molly Schreiber of Amateur Electronic Supply graphic design and marketing department who has announced her departure after 7 years with the company. The reason. Molly says she is moving to what she calls the lovely west coast adding that she will miss everyone she has dealt with during her tenure at A-E-S. October 29th was her last day with the company. (Via E-Mail)

**

NAMES IN THE NEWS: W1BKR INDUCTED INTO BROADCASTING AD CABLE HALL OF FAME

And congratulations to Bill Baker, W1BKR, on his election into the Broadcasting & Cable Hall of Fame. Bill is the chief executive of New York Public Television, which includes WNET Thirteen which is New York's flagship public television station.

Bill Baker has been head of New York Public Television since 1987. During his tenure WNET has grown and prospered, creating new program standards such as Charlie Rose, Wide Angle, Religion and Ethics NewsWeekly, and the children's math mystery series Cyberchase. Baker also established the

station's Educational Resources Center, which has become America's most prolific teacher trainer in multi-media techniques, and developed its first cable channel known as MetroArts Thirteen.

Ham radio wise, W1BKR was a co-producer of the ARRL video Amateur Radio Today and his article titled Amateur Radio is Part of New Media Task Force appeared in the May issue of QST. The induction ceremony honoring W1BKR will take place on Monday, November 8th at the Waldorf Astoria Hotel in New York City. (Adapted from Shoptalk)

**

NAMES IN THE NEWS: N4MC "VANITY HQ" WEBSITE GOING AWAY

Also, Michael Carroll, N4MC, has announced that as of Thursday, October 21st he is no longer supporting the Vanity H Q website. Vanity H Q was, and for the moment still is, a point in cyberspace where you can go to research availability of United States vanity call availability or simply find out the latest issued.

According to a posting at the site, at some point in the near future the www.vanityhq.com domain will itself become inactive. N4MC says that this is not an action based upon lack of funding. Rather, its because of a shift in his personal priorities. (K2GW)

**

HAM RADIO INDUSTRY NEWS: NEW QRZ CD-ROM AVAILABLE

The 24th edition of the Q-R-Zed C-D ROM Ham Radio Callsign Database is about ready to start shipping. The disk contains the same 1.2 million callsigns found on the QRZ.com on-line database and you have the option of reading them from the DC ROM or installing them on your hard disk for lightning fast access. For ordering and shipping information simply point your web browser to www.qrz.com and click on the photo icon that says "New Q-R-Zed CD ROM" (QRZ)

**

BREAK 2

This is ham radio news for today's radio amateur. From the United States of America and here in Auckland, New Zealand, we are the Amateur Radio Newsline with links to the world from our only official website at www.arnewsline.org and being relayed by the volunteer services of the following radio amateur:

THE ARNEWSLINE SUPPORT FUND REPORT

Now with some good news here's Amateur Radio Newsline's Support Fund Administrator, Andy Jarema, N6TCQ.

--

In the month of August we heard from monthly contributor Joseph Bartzi, Jr, KC8DKF of Columbus, OH; From Indiana, the Huntington County Amateur Radio Society, K9HC: The Southwest Michigan Amateur Radio Team in Portage, K8KZO: Dean Carothers from the W4HPL repeater in Cookville, TN; Johnny Wallace, K5POP of San Antonio, TX; Albert Toering, N6TEZ of Anza, CA; Monthly contributor William Walters, WA2IBM, of San Jose; Monthly contributor Scott Hensley of the Area Communications Team, also in San Jose; Harold Hackman, W6HVH of Riverside, Brad Berryhill, WA6JJB of Anaheim Hills, The Westside ARC of Marina Del Rey and the Catalina Amateur Repeater Association, AA6DP.

A big thank you to everyone. Through your help we've been able to take care of all of the Young Ham of the Year award expenses, but of course, the newscasts go on. A reminder that Newsline is a 501c 3 California non-profit corporation. Information on how to support us is on our website at www.arnewsline.org. That address will be repeated at the end of the newscast.

I'm Andy Jarema, N6TCQ.

--

Thank you Andy. (ARNewsline(tm) Support Fund)

**

ON THE NET: JUNO FOLLOW-UP

An update now to our recent story on Internet provider Juno cutting out most of its free services using off-line mail handling software. And it comes thanks to some really intensive digging by one of our listeners who happens to be a Juno subscriber.

After hearing our story, John Vander Stel, WH6LY, of Grand Rapids, Michigan, took it upon himself to find out more. He says that contrary to our original story free account users will not have to go through another ISP to access their Juno E-mail after December 1st. He says that this was only made clear to him by digging into the F-A-Q about this change and then calling back to talk to another Juno phone rep. He

says that the even the first one he spoke with was not well versed in this change and provided improper information.

But all of John's work paid off for those of you who use Juno. The good news is that Juno access software will still allow the free account user to access the Internet and go to the Juno Webmail site to access their E-mail on-line. However, the time using that connection will be counted against their 10 free hours of connect time.

We have often said that you are all an important part of the Amateur Radio Newsline team. Our sincere thanks to John Vander Stel, WH6LY, who proves this once again. (WH6LY)

**

EMERGING TECHNOLOGY: WORLDS LARGEST NANOTUBES

The University of California at Irvine announced what it calls a breakthrough engineering discovery that is expected to have supercomputer and health care applications. This, as researchers at the Henry Samueli School of Engineering said they have synthesized the world's longest electrically conducting nanotubes. Nanotubes that are ten times longer than those previously created.

For those not aware, a nanotube is a memory unit made from carbon and consists of a graphite sheet seamlessly wrapped into a cylinder only a few nanometers wide. A nanometer is one billionth of a meter or about the size of 10 atoms strung together. The scientists who made them say that this discovery may lead to the development of extremely strong, lightweight materials and ultra dense nano-memory arrays for extremely powerful computers, ultra low-loss power transmission lines, and nano-biosensors for use in health care applications. (Science OnLine)

HAM RADIO IN SPACE: ISS HAM STATION TEMPORARILY QRT

Ken Ransom, N5HVO confirms that the ham radio station on board the International Space Station is back on thr air in packet mode. It had been off for several days without explanation but on Wednesday, October 19th, Astronaut Leroy Chow, KE5BRW, was able to check on the radio first thing today and resolved a minor setting discrepancy. Information on its operation is on-line at www.ariss.net and www.issfanclub.com. (M5HVO)

**

WORLDBEAT: FIRST STORE AND FORWARD IN UK

Turning to he internatioal desk, word from the United Kingdom that its first unattended 'store and forward' single frequency voice relay has become operationl. It as switched on at 13.30 UTC on Saturday October 16th on 70.4375 MHz in he Europen 4 meter band. Its call sign is M-B-7-F-M and it has a maximum 'store' time of 120 seconds. The installation is located in the Chiltern Hills with 10dBW Effective Radiated Power from a dipole antenna 32 meters above ground. (GB2RS)

**

WORLDBEAT: HAM RADIO SAILING THE ANTARCTIC

Call this one ham radio across the Antarctic. It started back on September 14th, when the famed yacht "Apostol Andrey" started out to circumnavigate the area while carrying an operational ham radio station.

During the trip the yacht will travel around the shores of the Antarctica without going further to the North beyond the 60th parallel which is the border of the Antarctic region in accordance with the International Agreement. The crew will try to establish a record for penetrating sailing yachts crossing the 70th parallel of the south latitude.

And for ham radio here's the best part. The skipper of the "Apostol Andrey" is Nikolay Andrey, R3AL. He plans to be on the air from the Antarctic area starting this December and continuing through March of 2005. Andrey has the QSL cards already printed for this expedition and the ship also has an official Russian postmark onboard and a special postal stationary envelope for this expedition.

For details on the World-Wide Antarctic Program and the expedition, go to the World-Wide-Web. The spot is in cyberspace at www.ddxc.net/wap (Via E-mail)

**

DX

In D-X, word that VA6JWT is now in Somaliland. He says that he expects to be there for at least six months and plans to operate as 6O0JT. (RSGB)

And F5PSA is in Cameroon until February of 2006. He is operating as TJ3SL in his spare time. (OPDX)

Lastly, G4JAG, is now active from Thailand as HS0ZFP. Chris can be found on 20 meters most evenings and says the best time for contacts back home to the U-K is around 18.00 UTC. For all of these stations, QSL as directed on the air. (RSGB)

**

THAT FINAL ITEM: HAM RADIO HISTORY - A ZL MILESTONE QSO

And finally this week, a bit of history from right here, down-under. Its the story of the first ever two-way radio communication between New Zealand and England made on the 18th of October 1924 by Frank Bell of Shag Valley Station, Otago.

Back then, Frank held the callsign Z4AA and on that date, using some rather primitive home-brew ham radio equipment, he made contact with Cecil Goyder, G2SZ at the Mill Hill school in London. The CW QSO lasted for about 1 hour and dealt mainly with issues of signal quality. It was also the start of the first scheduled contact -- or sked -- between hams in the two nations. For several nights after the historic contact the two radio amateurs kept in touch.

Further details of the activities leading to the historic QSO can be found on pages 40-41 of the NZART publication Ham Shacks, Brass Pounders & Rag chewers, A History of amateur Radio in New Zealand. Detailed information on the actual QSO, complete with a transcript, can be found on the web pages of the Otago, Branch 30 of NZART. To read them, just point your browser to www.qsl.net/zl4aa/ and follow the index for more. (NZART News)

>The "war to end all wars" began in the summer of 1914 (August, IIRC).

>The first issue of QST was published late in 1914 (December, IIRC).
>
>So much for "nationally prominent" before WW1.

You are correct, sir!

It should read:

The ARRL and its magazine QST were "nationally prominent" before the USA entered WW1. That's a documented fact. The League and US amateur radio all but disappeared during our participation in WW1, then the ARRL was reorganized soon after Armistice Day.

--

Thanks, Hans. The statement was way too US-centric as written. It's the same sort of mistake that people make when they say WW2 started on Dec 7, 1941.

--

It should be noted that one of the provisions of the early wireless acts would have licensed both receivers and transmitters. Through the efforts of the Wireless Association of Pennsylvania (most notably David Rittenhouse and Charles Stewart) and the Radio Club of America, the licensing of receivers was not enacted.

However, the WW1 shutdown involved both receiving and transmitting. Maxim and other League officials (Including Stewart) were instrumental in getting first the receiving and later the transmitting bans lifted.

> radio service that is still just a hobby. Tsk. Those amateurs are
> the ones seeing a mythical "sky is falling" scenario if the code test
> is ever eliminated. Not my paranoia. :-)

Some radio amateurs have told you that morse skill is the only
"superiority" they have in amateur radio? I don't believe you.
The hobby is one in which you are not a participant, code tested or
otherwise.

> I've been transmitting RF energy legally since 1953, over more
> parts of the EM spectrum than is allowed to radio amateurs.

That's wonderful for you, Leonard. If it provides you solace, go to
those parts of the spectrum permitted to you and operate. Live it up.
The hams I know are pretty much content to stay within their allocated
bands. I know of none expressing envy of those who may legally transmit
elsewhere.
It seems obvious that you have some envy of radio amateurs. Why else
would you haunt this newsgroup and appoint yourself advocate for
something or other?

> Never
> had any requirement to demonstrate any morse code skill to anyone
> in order to transmit below 30 MHz...or above it.

That's fine. In amateur radio, you'll need to demonstrate a little
knowledge to the tune of 5 wpm to operate below 30 MHz. If those
frequencies above 30 megs are your cup of tea, you needn't learn morse
at all.

> Doesn't make any
> personal difference to me whether or not the code test stays or is
> tossed in the dumpster. It's time the code test went to the landfill.
> It's long overdue.

Many disagree with you. I'm one of 'em.

> All those PCTA extras just hate the thought of removing the code
> test. For so many of them it's all they've got to show their eliteness
> in a hobby. <shrug> Some of them get rather angry and want to
> "fight" about it, calling any persistent NCTA personal insults.

You, on the other hand, never get angry and never insult anyone with a
different point of view than your own. :-) :-)

> I've operated in many radio services. Never once had to use any old
> morse or be required to know it...even though I did "know it" once,

> some kind of my-personal sort of thing. The code test isn't necessary
> for the FCC nor anyone else except all those Archaic Radiotelegraphy
> Society "extras."

It isn't only Extra class licensees who support continued morse testing.
Where did you get the idea that it was so?

> As to personal time spent "learning" something, I've spent many
> more hours per day over many, many more months to complete
> my formal schooling.

You probably spent those hours because you had requirements to fulfill
in order to complete school. Amateur radio isn't any different. There
are requirements to fulfill to qualify for the three license classes.
No exceptions are granted for "I don't want to".

> > Your "Why" would indicate that you simply aren't interested in the ARS
> >to the level that you would take the effort to get the license.
>

> Tsk. I don't "owe" anyone a reason for my doing anything. :-)

Mike wasn't asking for your reason for doing anything; he was asking for your reason for doing nothing. :-) :-)

> I'm not interested in joining any Archaic Radiotelegraphy Society.

Has someone invited to join one?

> You forget I HAVE a federal radio operator license and obtained it
> long ago. :-)

Well, there you go then. Use that one.

> Not a big deal. Had to use it only two years after
> getting that in 1956. Such federal licenses make some folks think
> they are real big shots (stretch that O vertically). Not me. Just a
> piece of paper.

It must have some meaning to you. After all, you've brought it up time and time again.

I'd think you'd be wary of Google biting you again. Don't forget that
all of your words are there too--the insults, the name calling--all of
it.

> The way the league wrote themselves up, they began as a local
> club using their ham sets to what was essentially hacking on the
> services of commercial telegraph providers. [see the details on the
> league's web site and in other published works by them]

Incorrect.

> ARRL did not spring into national prominence until AFTER World
> War 1, at least 8 years AFTER the Titanic sinking.

Incorrect. The League came into being in 1914 with U.S. entry into WWI
in 1917. QST resumed publication in mid-1919. The League was a
national organization before the United States entered the war.

> Even so, the
> league was very busy with competition from OTHER wannabe
> national amateur organizations.

"Wannabe" is right. None of the other amateur radio organizations were
ever serious competitors of the ARRL.

> Note: The Radio Club of America
> began 5 years before the creation of the little New England club,
> and "RCA" (as they call themselves) is still in existance.

Right. Five years before as "The Junior Wireless Club". The little New
England club grew and grew. The Radio Club of America was never very big

though it broadened its scope. Did you have a point?

> >Besides, on January 19, 2000, you told us you were going for Extra "right out

> same hoops they had to when younger.

You have a point. There is no reasoning with emotional belief systems. Take a guy who believes that those tested in amateur radio are "jumping through hoops" or that the testing elements given today are the same as those in years past. How would you deal with such a guy?

> Let me know when there's a federal requirement to run for some
> political office in order to talk about political affairs, OK?

You can talk about politics but that doesn't make you a politician.

You can talk about amateur radio but that doesn't make you a radio amateur.

You can talk about running for office but there are requirements to be met before you appear on the ballot. In the end, there is no guarantee that anyone will vote for you. You could be laughed at and heckled.

You can talk about becoming a radio amateur but there are requirements to be met before you'll receive a license. You can talk about changing the requirements for becoming a radio amateur. In the end, there is no guarantee that anyone will support your ideas. You could be laughed at and heckled.

> Since when did the First Amendment get altered? Every one who
> is a USA citizen has the Right to communicate with their
> government...about any existing laws and potential, pending laws.

You've done that. This newsgroup is not government and you are offered no protection from being laughed at or heckled. Pontificate at your own risk. Insult others at your own risk.

> Tsk. I might, at some future date, get an amateur radio license.

Hooooooooooo! That's a GOOD one, Leonard.

> Or maybe not. [one can't get too specific in this bunch of anal-
> retentive prissy literalists, they think everything one says is some
> kind of Religious Vow taken before God!]

Around here, a man is generally taken at his word...until he shows that his word means little.

> Why should I take the trouble to relearn morse code just for a
> chance to get a low-cost federal merit badge?

Why? Because it is the price of admission to HF amateur radio
operation.

> I don't need to
> prove myself in anything to anyone on any endeavor.

So you won't be getting the amateur radio license?

> Tsk. I was into HF radio communications without ANY sort of
> license requirement from 1953 to 1956.

Fine and dandy. The circumstances are different and it is nearly fifty
years later.

> Certainly not having any
> sort of requirement to learn or use morse code. Not once did
> that come up for the next half century of radio transmitting.

I follow you, Len. Now, back to amateur radio. For an HF license,
there is a 5 wpm simple morse test.

>

You know, it's funny that you mentioned that. That's just like it is in
amateur radio, Len. Those of us who have been in the game for a long
time have already run into fellows who blow smoke and "know all about
it".
We know when someone is trying to pass himself off as something he
isn't.
Why, a guy like that could get stewed in his own juices. I know of a
couple of fellows like that.

> Those who do the name-calling don't get absolution from their sins
> therefore they usually continue. They think they can "get away"

You hit it right on the head, Len. Do you know any fellows like that?

> The KKK is a good example of one group that not only liked to call
> others whatever they wanted but also killed those that objected
> to their actions too strongly.

No need to go that far, Leonard. Just climb up on your personal cross
and tell the boys how you like to have the nails placed. I have a
feeling that the shebang is going to look like a piranha nailed to a
couple of boards.

http://groups.google.com/groups?selm=20011116200325.20950.00000506%40nso-cu.aol.com&output=gplain

Tell us, Len - do *you* think cb is a good example for how *any* radio service should be?

Do you think amateur radio should be more like cb (in any way other than not having a code test)?

>>"Handles", on cb, were and are used in an attempt to *avoid positive
>>identification* by others, particularly the FCC.

> Oh? You have personal experience with that? :-)

Only by almost 40 years of observing cb users.

I've never owned nor used a cb set. I have listened to what goes on in and around their 27 MHz allocations. Even as a teenager I wanted no parts of it.

>>That's not something any radio amateur should do. It's a bad thing.

> Tsk. Vile, contemptible, dastardly sort of bad thing? :-)

Do you think they are good things?

> Run right out to the FCC with your reports on evil, wicked, mean
> and nasty CBers not giving their proper, official call letters! :-)

Perhaps you think we hams should not have call letters either.

>>The use of "handles" by cb folks for the purpose of evading positive
>>detection
>>dates back years before FCC stopped issuing licenses and call letters for cb
>>users. In fact, one of the reasons (not the only one) FCC gave up on cb
>>licensing was that few cb users were using call signs.
>
> Well, there we have it...again.
>
> The "insiders" information on Why The FCC Does Things!

How is it incorrect?

> It's no wonder you get upset when someone calls Mikey Powell for
> "Mikey."

"someone calls Mikey Powell for "Mikey.""?

What does that mean?

Howard Stern recently called into a California radio show and spoke directly to Mr. Powell. You could have done the same thing, Len....

> It's hard to suck up to the boss when you get razzed for it?

I'm still waiting for you to call Mr. Powell "Mikey" to his face. Or in your official comments to FCC.

> So, what did YOU DO about making CB all right and amateur-
> proper?

Lots of things, Len.

What did *you* do? You were a "professional" with all sorts of experience in 1958 - couldn't you deal with that mess?

> Nothing? Tsk.

Why would cb be my responsibility? I was a kid when it became a mess. You were right in your career, doing the radio professional thing. Why didn't you make cb better?

> Class D Citizens Band has been in existance since 1958.

UHF cb was around for a decade or so longer.

> That's
> a long time. [I was working at Ramo-Wooldridge Corporation when
> that happened...were you working anyplace?]

What did you do to keep cb from going bad, Len?

>>cb folks started using the terms "personal" and "first personal" to mean
>"name"
>>and "first name" in part because the meaning of "handle" had changed.
>
> "Hi hi" and a "'73," copy your op-ed "599" OM. :-)
>
>>All of that is plain, simple fact. Hard for you to take, though. Too bad!
>
> NOT "fact," Jimmie. Just your OPINION.

What part of it is not factual?
>
> Try to understand you and your opinions are NOT the center of the
> universe.

What part is not true?

>>10-4, good buddy? What's *your* handle, Len? How many Bird watts does your
>>radidio dead key?
>
> I don't have a "radidio." Explain what that is supposed to be.

I think you know, good buddy.

> I have a NAME and use it, on or off any communications device.

Not always! Particularly not here.

Many of your postings here, under screen names such as "nocwtest" and
"averyfineman", do not contain your name anywhere. Others, under screen names
like "lenover21" and "lenof21", do not make it clear what your name is.

> My briefcase has a handle, my suitcases have handles, all our
> doors at home have handles, many of the kitchen implements have
> handles (knives, pans, pots, etc.), we have all sorts of drawers and
> cabinets with handles. Even my despised (in the PCTA's view)
> Icom R-70 has one handle!

Nobody despises your R-70, Len. Least of all me.
>
> Sunnuvagun! :-)

You also have handles, Len, by your own admission:

http://groups.google.com/groups?selm=20011018201223.29362.00000049%40nso-b
k.aol.com&output=gplain

Quoting from that one:

"My AOL membership limits the number of letters and also precludes using my full name due to the large number of AOL users who have the same first few letters. At best I could have only the first five letters plus a number suffix, therefore I chose the same handle as I had on US Pompeii BBS eleven years ago."

http://groups.google.com/groups?selm=20001222185924.10627.00003177%40nso-bj.aol.com&output=gplain

Quoting again:

"Quite true. Some don't understand that different "handles" may be an expression of humor. With a large number of users on AOL, for example, it was impossible for me to use my name even with given name shortened. I couldn't use an old "handle" of mine from a BBS run by a friend of mine. AOL rejected them due to some alphanumeric conflict with another subscriber(s). It took three years before that other subscriber(s) left and I could use the one I wanted. The handle is an inside joke, explainable only to those who were on the US Pompeii BBS. I've used "No CW TEST" as a handle since I was, and still am, advocating the abolishment of the amateur morse code test."

So please don't tell us that you use only your name for identification, and that you have no "handles". That's simply not true.

> All you have is an amateur callsign and use it like a name.

Actually, I've had several callsigns. And a name. And some screen names. No handles.

In amateur radio, a callsign is a positive identifier. There are many amateurs with my first name, a few with my last name. Elsewhere in the world there may be someone with exactly the same name as me.
But there is only one N2EY.

> That's
> not good for you in court when some police force makes you appear
> there.

Why would any police force make me appear in court? And what does that have to do with amateur radio policy or this newsgroup?

> You are federally authorized to transmit RF energy, but ONLY
> in amateur radio bands and ONLY within their technical limits.

Wrong again, Len!

I'm authorized to transmit radio signals in the amateur bands - and also to use many other radio services, including cb and FRS. Within the regulations, of course. If I were so inclined, I could get a GMRS license, VHF marine radio license, and other FCC licenses - just like any citizen.

> A Bird manufactured wattmeter is a good dummy load with a meter
> (reasonably accurate) measuring the power dissipated in that load.

??

"wattmeter is a good dummy load"?

No it isn't.

> I first used one in commercial work sometimes in the 1960s.

So what?

>>Perhaps your love of "handles" is why you can't seem to call people by their
>>names...
>
> Perhaps you are losing your sanity, going around imagining what
> others think and do.

If that's your measure of sanity, then you are far worse off than I, Len.
Because you frequently tell us what other people are thinking, and what their
motivations are.

> Tsk. We already have one confirmed nutso
> in this newsgroup.

Who would that be? Who made the diagnosis?

> Another one (another PCTA) won't make much difference.

>>> Meanwhile, back to the "meaningful" discussions by the Architects

>>> which have enormous impact on amateur radio policy matters. :-)
>>
>>They have more impact and relevance than your oft-repeated stories of
>>watching
>>teletypes at ADA 24/7, or your claim to fame of writing for a defunct
>>magazine.

> What "oft-repeated stories of watching teletypes," Rev. Jim?

You've told us of your exploits in Japan many, many, many times, Len. As if
they somehow made you more qualified to determine how *amateur* radio should be
run than those of who actually are radio amateurs.

> Army station ADA had teletype loops linking transmitters, receivers,
> and the control. Only three loops and three separate circuits as
> order wires (where all the commands are given, advisories noted).
> That makes only three to "watch" (one can hear them start up from
> their normal idle state). One had better "watch" those...or face
> disciplinary action at a military station.

And there were how many of you on duty at any time to do that?

> Oh, but you've never served your country in the military, have you?

Never claimed to. Why is that relevant in any way? You don't show any respect
to those who have served our country in the military, but who disagree with you

on issues that have nothing to do with the military.

> No, you serve your country "in other ways."

Where did I say that?

Besides, why is that relevant in any way? You don't show any respect to those who have served our country in nonmilitary service, but who disagree with you on issues that have nothing to do with government service. For example, Dave Heil, K8MN (and a list of other calls) has served our country in both military and nonmilitary service for his entire professional life, IIRC. Yet you made fun of his service to the State Department, and claimed that his examples of Morse use in nonamateur radio communications were untrue. *You* weren't there, *he* was, yet you argued with him about it, called him names, and basically showed him no respect.

> Not all of us can be as lucky as I and get exposed to REAL HF
> communications done around the clock, every day of each year.

Seems like you don't consider amateur radio to be "REAL HF"....

> But, you never did ANY of that so you show your spite by insulting
> those of us few who did real service. Tsk.

How did I insult anyone's military service, Len? Show us. C'mon - all my posts are in Google.

> Now you want to toss snit on Ham Radio Magazine? Again?

Snit?

It was "ham radio" magazine, Len. No capitals.

Is it not defunct? Where can I buy some 2004 issues? Or sign up for a current subscription?

> Jim Fisk and Skip Tenney (editor in chief and publisher, respectively)
> started HR as an independent amateur radio periodical. What they
> started kept on going for 22 years.

Yep. It was a pretty good mag. I was sorry when it stopped publication.

btw, QST has been published for more than 88 years total. It is the longest-lived radio periodical in the world. Not just amateur radio periodical - radio periodical of any kind.

> [Jim Fisk died suddenly of a
> heart attack before the 22 years were completed]

Sad. Very sad. Too few people take proper care of themselves.

> Communications
> Technology, Inc., did not have the benefit of a budget umbrella and
> life preserver from any membership organization...they did it by
> themselves.

What are you getting at, Len?

"ham radio" magazine was supported by its advertising and its subscriptions. It did not have to provide any membership services other than mailing copies of the mag to subscribers each month.

How would a "membership organization" have functioned as a "budget umbrella and life preserver"? If anything, having to provide services to members costs money rather than generating it.

> Their reputation as a source of technical information
> for radio amateurs was recognized around the world. Still is.

As I have written - it was a pretty good magazine. Almost as good as QST.

> Did you write articles for HR? No, you didn't.

Did you write articles for QST? No, you didn't.

> Were you on the HR
> masthead (the column next to the TOC showing the names of the
> staff)? No, you were not. You did neither. I did both.

So what? Your articles in hr were spread over about a 5 year period in that 22 year history. There were perhaps two dozen of them, all of them theory articles whose content was pretty standard stuff. (For example, there was a series of articles on digital theory. QST ran a similar series more than 5 years earlier).

None of your articles appear to be construction articles. Not one.
>
> I don't "claim any fame" from what was minimum-wage work for HR.

Sure you do. You mention it here frequently.

> It was FUN work in a field I was, and still am, in...that of radio and
> electronics.

Not retired yet, huh?

> In fact, I don't claim ANY "fame" in anything.

Sure you do! Otherwise what is the point of your long OT postings here?

> I've done
> my career well in a work that I chose because it was interesting to
> me, still do my hobbies in that for the same reason.

There you go!

> What I've said I've done was actually done.

So have many of the rest of us. But you make fun of what others do.

> There's even
> "documented" proof available that I did. :-)

Sounds like fame-hunger to me.

> I don't hang in a news-
> group every day as you do, speaking out on all kinds of subjects

I don't "hang out here every day", Len. Even if I did, is that somehow wrong?

What you do, Len, is to post here *almost* every day, at great length, on a wide variety of subjects.

> that: (1) Don't concern amateur radio in any way;

Sure. You do the same thing. Is that wrong?

> (2) Are not from your work experience;

Sure. You do the same thing. Is that wrong?

If I posted things from my work experience, would that somehow cause you to show some respect? Or change your views on anything? I don't think so.

Is posting from a person's work experience somehow more valid or more relevant than posting from nonwork experience?

>(3) Are presented as "facts" because they
> are personal preferences and opinions instead of facts.

Where? Give us some examples, Len. Show us.

> You've done all three of those in one message. :-)

Where?

It sure sounds to me like Mike, KB3EIA, is right: You want to be the moderator, telling everyone what they can and cannot discuss, and how they are to discuss it.

Interesting silence on the other end. Of course, we all know that government promotion committees aren't the least bit influenced by the fact that one candidate has a father in high places.

NOT.

The real truth is that most of the members of such a committee would be scared to death for their own futures if they didn't look the other way and let the promotion go through.

The watchword among government employees is "don't make waves," and it is usually scrupulously observed by the pussies who are career government managers. No one ever accused a government manager of taking risks.

Don't worry about Powell, as soon as he can get BPL rolling and
bringing in the big bucks he will be leaving the FCC for a cushy,
highpaying, do nothing job in the BPL industry as his reward for getting
it shoved down our throats.

1344. Why so few hams using Linux?

Newsgroup: rec.radio.amateur.policy
Date: 2004-10-30 04:28:23 UTC
From: K&#65533;HB <groupk0hb@earthlink.net>
Message-ID: <HLEgd.6396$kM.1827@newsread3.news.pas.earthlink.net>
Source record: 99241

I would have expected hams to be big users of the Linux (and variants)
OS, but apparently it ain't so.

At my web site I track a number of things about visitors, and one of
those is the OS they use. Since my web site is primarily concerned with
ham radio, I assume a high percentage of the visitors are hams.
Interestingly, out of over 6,100 visitors, only 33 were Linux users.

Odd.

OS Count Percent
Linux 33 0.54 %
Windows NT 99 1.61 %
Windows 95 52 0.85 %
Windows 98 886 14.44 %
Windows 2000 1018 16.59 %
Windows XP 3558 58.00 %
Windows ME 334 5.44 %
AIX 5 0.08 %
Macintosh 56 0.91 %
Mac OS X 71 1.16 %
Web TV 18 0.29 %
Unknown OS 5 0.08 %

Geee, Hans... Maybe it's because 99.38% of your users consider Unix,
AIX, and "Other" to be either too difficult to set up, or prefer to
user Windows and Mac computers instead.

I know quite a few hams, and believe me.. a VAST majority of them
would NOT be nearly able to install, set up, and configure a Linux
system. Trust me. Most them are barely intelligent enough to use
Windows!

..and for what it's worth, yes, I do use Linux. I use Mandrake 9.2,
and Redhat 5.2. You'll also see me using Mac OS 9.2.2, OS X 10.2.2,
Windows ME, XP, and 2000. Hell, I've even got a Windows 98 machine or
two sitting around here and a C-128 that runs UNIX!

Guess I'm hogging up all the Geek waves allotted to this callsign
region....

That's because most hams aren't technically inclined. You should realize this because of all the complaining that goes on about being tested for anything.

I've been running Suse for 2 1/2 years now myself. I guess most people
still think Linux is hard to install. It's not anymore.

Those things have been around for a couple of years, Leo. Advertised on a few
amateur-related websites, too. I can't imagine anyone with any sense actually
getting one! (IMHO)

Trivia question: Can you identify the equipment they chose to use on the badge?

>Which is good, because they weren't designed for it! That is exactly my
>point, Jim. Times change and we just cant see the future, at least some
>pretty important parts of it.

Sure.

But the point being made was that the towers would and did survive being *hit*
by planes built when they were designed. The resulting fuel fire is another
issue, and it was the fire that brought them down.

>>>I wonder what speed was calculated for also. The WTC planes were moving!

>>>I don't know how things were in this case, but sometimes allowing for
>>>all those possibilites means the thing isn't built.

And *that* was a big issue at the time. A lot of people did not want the
towers, but they were pushed through anyway.

Robert Moses wanted to remake NYC into a car-based city. Fortunately he was
stopped, but not before a lot of the city that should have been preserved was
torn down.

He wants to go to Mars, too.

>When we decide to go to Mars - and really mean it - is when we have
>another Sputnik style embarrassment.

Who would do that? The Russians? Chinese? Doubtful any time in the next couple
of decades.

But I think the real question is not "can it be done?" but "should it be done?" Look at what happened in the 1960s - we focused on getting to the moon while our earth-bound transportation infrastructure and manufacturing capabilities slowly fell apart or fell behind. When the oil crises of the 1970s hit, American automakers had to play catch-up.

>I just hope that too many years of
>infrastructure neglect won't render us not up to the task.

Agreed!

Only if Mr. Powell is otherwise unqualified for the job.

>> > I'm not sure I understand why HS is picking on Powell!

I think the selective enforcement of certain rules is one reason. If Stern says
certaion things, he gets fined. But let the same things be said on "Oprah" and
it's no big deal.

Another point is the extreme vagueness of FCC definitions of what can and
cannot be said/shown on broadcasting stations.

All of which will eventually be beside the point, because Stern is moving to
Sirius satellite radio in about 18 months. FCC doesn't regulate the content on
satellite radio.

>> > The FCC was on
>> > Stern's ass LONG before Powell got his job. It's probably a miracle that
>> > Stern is still allowed on the air.

Not a miracle at all - it's based on one thing: ratings. Stern's ratings are
consistently high, which makes $$ for everyone. So his employer fights to keep
him on the air.

>> > To believe the movie made of his life, he's come close many times to

==>BRITISH AMATEURS GET ADDITIONAL 100 kHz ON 40 METERS OCTOBER 31

Starting at 0100 UTC October 31, the 40 meter band in the British Isles will effectively double in size when radio amateurs there gain access to 7100 to 7200 kHz. Ofcom, the UK telecommunications regulatory authority, announced the Notice of Variation October 26.

The change, in the works since last year, is a result of actions taken during World Radiocommunication Conference 2003, where conferees agreed to move broadcasters out of 7100 to 7200 kHz in Regions 1 and 3 to make room for the Amateur Service. Coincidentally, the UK band expansion, which also includes independently governed regions where Ofcom regulates telecommunications, will occur just about halfway through the CQ World Wide Contest (SSB) this weekend. Contesters take note!

The Ofcom NOV makes the segment available on a secondary basis, and amateur stations in the UK and affected regions may not cause interference to stations operating in other radio services inside or outside the UK.

The UK and Ofcom-administered regions join the Republic of Ireland--which reportedly gained access October 20--as well as Croatia, Norway and San Marino among Region 1 countries that have authorized access to the additional spectrum on a secondary basis. The WRC-03 change does not formally go into effect until 2009.-thanks to Lawrence Woolf, GJ3RAX; RSGB

Is that the Newt whose treatment of his former spouse wasn't exactly in line
with "family values"?

Or the Newt whose intercepted cell phone conversation wasn't exactly G rated?
>
>They didn't - they thrived, adapting to the new situation.

Fascinating!

>As they
>receive less and less government funding, they have more and more

I don't see journalistic freedom as a downside. Perhaps some people would
prefer that all broadcasting be like Fox - a cheerleader for the administration
currently in power.
>

>I actually get my news from NPR and Reuters now.

I've done NPR and PBS for years. Best broadcasting in the USA, bar none.

>Despite NPR's middle
>to left perspective, they actually report so much more than the other
>organizations - Network news sucks, CNN is weird, and Fox News is great
>if you are a Pub that only wants to hear news that agrees with your
>world view.

I find the whole NPR/PBS viewpoint to be all over the map - left, right, center, whatever. IOW, well rounded and balanced. But I can see where some folks would be annoyed by hearing things that are not complimentary to the current administration - whoever it is.

One thing I find interesting, though, is the upscale drift of the PBS DIY shows. Seems to me that "This Old House" and "Hometime" used to be mostly about regular middle-class folks fixing up their homes themselves. But in recent seasons, it's become more and more about monster projects in exotic or upscale locations, using top-of-the-line products. And most of the work is done by contractors, not homeowners.

In general folks simply don't care about operating systems, they care about what they can do with their computers and they have a helluva lot more choices in this respect than Linux offers by a huge margin.

I'd put Windoze behind me in a wink if it wasn't for the fact most of the apps I use regularly have not been made available in Linux versions. Just within the field of ham radio there are no Linux versions of EZNEC, DX4WIN or Writelog that I'm aware of. Ditto out in the for-money engineering/scientific world. None of the authors of the high-powered engineering analytical and design apps I use offer Linux versions. I could set up a Linux or a dual-boot box dedicated to ham radio purposes but what incentive do I have to bother with those pushups when I get everything I need out of one Windoze box? Admittedly I'm atypical, not many folks hams and otherwise are doing the sorts of things I do with a home computer but the general concept applies almost universally.

The current scene with Linux struggling to get into desktops everywhere is a bit of a throwback to the early 1990's. In that timeframe PCs were in the process of catching up with Macs and the third-party software developers found themselves faced with having to support both operating systems and some did. For awhile. But they couldn't afford to support both in the long run so they had to pick which O/S was going to dominate down the road and the Mac lost. Linux is in the same basic boat today. I keep my eye on Linux because I really would like to get away from Microsloth and it's tactics on general principles but I'm not losing any sleep over it.

And a very small point it is IMHO. You do realize that *something* can
be designed to withstand *anything we* can unleash? All it takes is the
will and the money.
>
>>>>I wonder what speed was calculated for also. The WTC planes were moving!

And that is *still" a major thing. Those planes were traveling beyond
cruise speed, and not far from the airframe's ability to hang together.

Other things we should make sure buildings are designed for:

Anyone that watched Godzilla knows that if something happens that
mutates an innocent reptile into a huge monster, it isn't going to be good.

Is the building designed to withstand earthquakes larger than any so
far experienced?

Tsunami? What if the big earthquake happens offshore and a huge wave is
generated?

Meteorite hit? 'nuff said.

As ridiculous as my points are, they illustrate my two points

1. You can't design for everything. If you try, you never build anything.

2. There will always be people that use hindsight to condemn others for
not having "enough" foresight.

Perhaps. I wonder how many people objected on the grounds that a bunch
of evill people would try to fly a plane into it.

To effectively resist such a thing, there probably has to be enough
mass, and it has to be connected together in such a way, that we would
be getting into the same problem that existed befor we started having
interior frames supporting the outsides of skyscrapers. There is just a
limit to self supported weight.

AH HA! Why wasn't the trunking system designed to function in case of
such an incident? Completely irresponsible! How could the engineers not
take such a possibility into account?

(and no, I don't believe that for a moment)

If you look at what the Chinese are doing these days, I suspect it will
be them. The Ruskies are working with as as our ferry service, and I
don't see any change for quite a while

> But I think the real question is not "can it be done?" but "should it be done?"

> our earth-bound transportation infrastructure and manufacturing capabilities
> slowly fell apart or fell behind. When the oil crises of the 1970s hit,
> American automakers had to play catch-up.

I don't make a connection there, Jim. While those two things happened,
I can't see a direct connection. The government was involved in
financing the space program, while the automakers were just caught
flatfooted by the oil embargo, and the resultant change in consumer taste.

And I think the manufacturing problems were brought about by our
earlier success in manufacturing. All things have a cycle, and we just
allowed our manufacturing ability to age and stagnate while we lined our
pockets. Eventually the manufacturing ability goes away while we console
ourselves that the cheap offshore workers make for a better profit.

Of course this just rips the innards out of the middle class, as decent
paying jobs dissappear, and are replaced with hamburger flipping type
"manufacturing" jobs.

There are two ways of becoming wealthy.

1. Work hard, manage your money well, educate yourself, and you will
likely prosper.

2 Make those around you poorer! 8^)

I guess I skipped around there a bit. I meant that to Newt and his
minions (hey - what IS the difference between a minion and a crony,
anyhoo?) the fact that they did not Kill public broadcasting, they lost
any ability to control it. As long as they controlled the purse strings,
they could threaten to cut off monies if public broadcasting didn't
start broadcasting "properly" ala Fox News. Instead, they made that
wrong assumption about public broadcasting's will to survive, and even
thrive. So instead of doing what they wanted to do, they inadvertently
did the right thing. Happens once in a while.

I stopped watching the show after a person in Taos NM was redoing his house. The host immediately asks him what the budget is. Upon getting the answer - $150,000 - he made all kinds of clucking noises about how hard it was going to be to redo a place for that little. This was at a time when the typical new house in our area was going for that much. I figured the show wasn't too relevant to me anymore.

> Odd.

I run OSX and a couple flavors of Windoze.

I run OSX at work for my main computing, plus some Windoze as needed,
and Windoze at home for ham apps.

And that is the explanation. I don't choose a computer for an operating
system, I choose it for what work I am doing. When doing my multimedia
work, I use my Mac. When doing Ham apps, I use a PC running Windoze. If
Linux had the tools (software) I wanted, I would use that.

But there is one particular ham app for OSX that has me salivating.
Logging, mapping, callbook, dx cluster telnet, psk31, rtty, and lots of
other features in a package that is so slick that even non-hams say Wow,
that's beautiful. If I get an old Imac with enough memory, I can get it.
I just don't know how to tell the wife that I'm getting a 6th computer
for the Coslo household. She seems to think I have enough!

- Mike KB3EIA -

Oh, and the other thing is OSX by a country mile! 8^)

>two sitting around here and a C-128 that runs UNIX!

What, you don't run my primary OS -- eComStation, the OEM verson of
IBM's OS/2 Warp, the system that M$ wanted WinDowz to be but missed
the target entirely ??? <ggg>

I also run Linux (RedHat 9) and Win NT4, the latter only because I
have several essential control and database lookup programs that
will not install or run on anything but "real" WinDowz (yes, I've
tried them on WINE, the Linux Win Emulator and ODIN, the OS/2 Win
emulator).

When I can get a Linux version of my SemWare text editor ("they're
working on it") and if by that time Mozilla Thunderbird can be
configured to use that external text editor, then I'll make "the big
switch", probably to Mandrake. By that time WINE should be able to
run the other programs which do not have a Linux version.

Geekism isn't confined to the East Coast. PS - my brother who is a
computer programming geek by profession has the call sign KU2P -
"close enough for gov'mint work...".

>pushups when I get everything I need out of one Windoze box?
>Admittedly I'm atypical, not many folks hams and otherwise are doing
>the sorts of things I do with a home computer but the general concept
>applies almost universally.

Lots of hams are doing EZNEC, Writelog and such, and if there's no Linux version, they'll use something else in the shack computer.

>which O/S was going to dominate down the road and the Mac lost.

Yup.

And those who make both versions typically do the Win version first.

>Linux
>is in the same basic boat today. I keep my eye on Linux because I
>really would like to get away from Microsloth and it's tactics on
>general principles but I'm not losing any sleep over it.
>
There are some other reasons Linux isn't used much:

-If you buy a computer new, the OS is usually bundled in and preinstalled. You don't save much if anything by specifying no OS or Linux. Look at what Dell

wants for a bottom-of-their-line desktop. Then note what OS comes with it.

-Old versions of various OS's are out there for free, or almost free.

-Lots of folks are stuck with whatever OS the IT folks at work decide is "company standard". Since they already know that OS, it's hard to justify the time, effort and expense to learn another one when the one from work is readily available. And unless your in certain fields, the work OS is almost always some flavor of Windoze. (In the past 10 years, I've had to deal with 5 different OS's at work: Win 3.1, Win95, Win98, Win2000, and now XP. Why add to that pile at home?)

Boils down to the fact that for most hams and most nonhams, the 'puter is just a tool to get something done. And the biggest toolbox has Bill Gates' products in it.

73 de Jim, N2EY

remember the old saying:

"nobody ever got fired for specifying IBM"

?

It's been rewritten so the last word is "Windows"

I agree with your comments. I'd like to add that a recent survey shows that over 70% of the Windows machines out there are vulnerable to attack because most of the users don't know how to configure a firewall or don't know why having anti-virus software is necessary or they don't know what is the difference between a firewall and anti-virus software and antispyware and anti-adware. It was an article in usatoday.com a few days ago. Security is Windows main problem and it's really a user issue since there are a lot of tools out there to make the Windows OS a LOT more secure. But, if you're a gamer, Windows has the better selection - other than that Linux has sufficient apps that I tend to use it instead of Windows (yes, I use Windows also - kinda difficult to get away from it when schools and businesses tend to use M$ products). Oh well, let people continue to buy (or, more likely, pirate) Windows OS and software - that way the black-hat hackers won't waste their time messing with a less-used OS.

I used OS/2 Warp 3/4 at one time and I still have a copy of it. I doubt I'll ever re-install it. IMO, it was definitely better than Windows 3.1x. Just as TI failed to properly market the 99/4A, IBM did a lousy job of marketing OS/2, also.

>figured the show wasn't too relevant to me anymore.

Real estate is one of those things that varies all over the place. Look at
realtor.com and see how much the same house costs in different parts of the
country, or even in different parts of the same *county*. It's all in what
you're used to. In a house worth, say, $500,000, a $150,000 re-do isn't such a
big deal if it includes really serious upgrading. Heck, I know folks doing

$100,000 improvements to $300,000 houses - because the cost of the house they want, a couple of blocks over, is well over $450,000. And we're not talking mansions or fancy places, either.

Eventually that bubble will burst.

Last I heard the Internet newsgroups are international forums.
And it would explain the presense of UK hams on frequencies
they haven't been before.

You must be jiving us. Otherwise I might be inclined to think that
you're a bit of a dim bulb. You've been told a number of times that
there is a large difference betweening "being allowed" and "being
required" to know.

I've been playing in the CQ Worldwide DX 'test this evening. I've CQ'd
in the American band, announcing a listening frequency below 7.100.
I've not paused a single time to check a lookup table or the internet
before responding to any of those who replied to my CQ. Maybe you
should make an effort to police 75 and 40m over the weekend. Some of
those shifty DX stations may try to pull a fast one.

>
> He was made a Commissioner, yes. What was his father's job then?

In 1997? He was a retired General who was popular on the dinner/speech
circuit. He wrote his bio in '95. Just prior to his nomination as
Secstate, he was chairman of "America's Promise", a nonprofit dedicated
to building character in young people.

Michael's promotion to FCC Chairman came nearly simultaneously with his
father's nomination.

The party in power gets to name the FCC chairman. President Bush moved
Powell to that spot. He had, by that time, four years of FCC
experience, whether he knew much about what he was doing or not.

Does Michael Powell realize that BPL will pollute the public airwaves
just as surely as raw sewage and fertilizer runoff pollute can our
water? I don't think he does yet. It is time for him to be educated.

This is the time for all users of our HF spectrum to begin the mother of
all letter writing campaigns to Congressmen and Senators. The FCC
listens to those folks like it listens to no one else.

Tsk.

Len gets told that he is off topic when he posts about radio related
(but not necessarily amateur radio) topics. So he beats you guys over
the head calling attention to all of your own off topic postings.
Then you say Len has a double standard.

Hi!

You guys are less than truthful. A lot less.

I had a co-worker that I would get into discussions with occasionally.
I knew I had won the argument when he would freak out on me. We're
talking yelling, name calling, etc. He would always come back later and
apologize, and since he was a decent sort, that was okay by me. Here, no
apology is forthcoming, perhaps.

>
>
> See? "It's all the liberals' fault!"

1. Liberals believe in spending lots of money regardless of tax monies
received.

1a. Conservatives believe in a balanced budget, with money spent no
less than equaling input from taxes.

2. Liberals believe in using government to further their social agendas.

2a. Conservatives believe that the government that governs least governs
best. This means getting government off peoples backs.

3. Liberals believe in the government taking in tax dollars, and
redistributing them as welfare.

3a. Conservatives believe in "If you can't make it on your own, you
aren't going to make it/

So lessee, we gots ourselves record deficits (coming after a surplus)
and tax reductions - Hey, there's a recipe for bankruptcy!

We gots faith based initiatives, and a drive for vouchers, we gots a
castrated version of stem cell research - Hey ya know the rest of the
world is moving ahead - just one more way we are falling behind. Now if
we can just get that damnable evolution out of the schools...

And as we have scaled back on personal welfare, corporate welfare is
just boomin' baby!

So who is the liberals, and who is the conservatives?

It's pretty common. It is like the networks bringing out new "reality
shows" because they are what get people watching - while ignoring the
fact that network viewership continues to tumble. It's why the music
industry bemoans declining sales, and blame it on MP3 file sharing,
completely ignoring that their present product is way overpriced - oh,
and by the way, the fact that "popular" music SUCKS these days might
have something to do with it, eh?

Yup, like when Mr. and Mrs. Smartbuy decide to sell their 20,000 sq. ft
McMansion and move into a apartment or condo after they retire, and find
no market for it? They will be trying to sell a huge house that costs a
fortune to heat and keep up, and is poorly constructed to boot.

WoW! I've been on a rant here!

>On theirs. When there is a disagreement, the reaction is all out of
>proportion.

Yes, I've noticed that. Nothing new, really - look up how Len behaved in "the
sphincter post". That one was a classic!

Basically, a fellow who had been a USCG radio operator described what it was
like doing so at the station in Hawaii. Using Morse code on 500 kHz and HF for
maritime communications. Not in the 1930s, either. Post wasn't even addressed
to Len IIRC. Len didn't exactly show respect for the skill and dedication
required to do that job.

>>>I'm here for a "bloody good row", and
>>>I want to hear opinions that differ with mine.

>> Me too!

Haven't seen one in more than seven years. In fact it works the other way: If you get to the point where you've actually proven a mistake on the part of the other party, the resentment and abuse get worse. This was clearly demonstrated when Len stated that he'd *never* used a certain screen name on rrap - and then I googled up a few posts where he had.

>>>>>>>I kind of thought that was what we were here for.

>>>>Me too.

>>>>>>>As for off topic, yourself and LenAnderson@ieee.net are the ones
>>>>>>>complaining of messages being off topic.

>>>>Yep. Even though they go off topic even more.

What's interesting is that you'll see OT assertions about how somebody was doing military radio while you were still in diapers, but no explanation about how that connects to amateur radio policy today.

>>>>>>>C'mon, you are starting to sound like a "victim".

>You mean like the folks that never paid attention to Harry Truman's "The
>buck stops here"?

Yep. When asked if he'd made any mistakes in his time in the White House, our president replied that he'd made some mistakes in appointing certain people.

That was all. Talk about buck-passing!

>>>>>>Why does George Bush continue to fund those idiots?

>> See? "It's all the liberals' fault!"

>1. Liberals believe in spending lots of money regardless of tax monies

Supposedly so that those who receive the welfare will advance to the point
where they don't need it any more.

>3a. Conservatives believe in "If you can't make it on your own, you
>aren't going to make it/

AKA "free market" or "Darwinism".

>So lessee, we gots ourselves record deficits (coming after a surplus)
>and tax reductions - Hey, there's a recipe for bankruptcy!

In less than four years we went from surplus to incredible deficit. Last time
we did that to such an amazing degree was when Ronald Reagan was president...

>We gots faith based initiatives, and a drive for vouchers, we gots a
>castrated version of stem cell research - Hey ya know the rest of the
>world is moving ahead - just one more way we are falling behind. Now if
>we can just get that damnable evolution out of the schools...

And keep those gays from getting hitched! Yep, that'll solve all our
problems...

Back in the 1970s, the USA imported about a third of the oil used here. Now we
import about two-thirds. Wrong direction.

>And as we have scaled back on personal welfare, corporate welfare is
>just boomin' baby!

Only for certain organizations.

>So who is the liberals, and who is the conservatives?

Bingo! You oughta write that up, Mike. oh wait, you just did

>It's pretty common. It is like the networks bringing out new "reality
>shows" because they are what get people watching - while ignoring the
>fact that network viewership continues to tumble.

Inevitable result of more channels and more competing technologies.

The interesting part of "reality" shows (to me) is that they're all based on
fantasies!

My favorite ones are the PBS ones where they put modern day people into setups
from another time ("The 1900 House", "Frontier House", etc.) and see how they
fare. What's neat is that they become subtle but powerful commercials for the
modern life.

>It's why the music
>industry bemoans declining sales, and blame it on MP3 file sharing,
>completely ignoring that their present product is way overpriced - oh,
>and by the way, the fact that "popular" music SUCKS these days might
>have something to do with it, eh?

Part of that is the fact that a CD costs so much yet may have only a few songs
you want on it.

There's also so many competing *legal* venues out there like satellite radio,
streaming audio, the 99 cent iPod downloads, etc.

>>>So instead of doing what they wanted to do, they inadvertently

This week's "Hometime" just exploded that theory completely, at least for that show. The project is a kitchen redo. Young family (Dad, Mom, 9 month old baby) in a small frame house with limited budget. Everybody pitches in, cabinets and appliances are from the home center some contracting and lots of homeowner work, etc. Home videos integrated into the show. Real-life headaches and stresses dealt with.

Kinda like ham radio - lots of hams don't have ideal or even near ideal setups, but they manage to get on the air nonetheless.

>>>I stopped watching the show after a person in Taos NM was redoing his

Yep. And it gets worse: The McMansion is on a huge lot that has a pile of deed restrictions prohibiting things like subdividing the property, converting the house for multifamily use, etc.

Meanwhile the apartment/condos that they want to go into keep climbing in price because so many other people in the same situation are buying them.

> WoW! I've been on a rant here!

Not at all!

When you tell someone that their opinions are invalid based upon
whether they hold an amateur radio license, then that is exactly what
you are doing. Have you ever done that Jim?

> It's even worse, if you prove that their opinion isn't based on facts....

I especially liked your factoid where "a morse code exam acts as a
barrier to morse code use." That was a gem. And I didn't even argue
with it because it's true enough. But you argued with it.

Then there is my all time favorite, uttered by Steve, "Sorry Hans,
MARS >>>IS<<< Amateur Radio!" Steve's been backpedalling ever since.

> >>>I kind of thought that was what we were here for.
>

> Yep. Even though they go off topic even more.

Please allow me to set the record straight. You PCTA are constantly
on Len for bringing up radio related experiences, but since they were
not precisely amateur experiences, you have told him that he is off
topic. So when you stray to space exploration, B&W movies, bad math,
and lust for movie stars, he beats you over the head with your very
own "Off Topic" drum.

And you hate it.

> >>>C'mon, you are starting to sound like a "victim".

> You mean like folks who blame all the problems of the ARS on the code test?

Who are those people? Name them.

I blame the problems of the ARS on the following, in order of
importance:

Amateurs, ARRL, FCC, Morse Code Exam.

> >> Reminds me of the "parade of victims" that NPR features each day.
>
> When?

Daily.

> I listen to NPR frequently, and I've not heard any such "parade".

Not a parade in the usual sense. But day after day NPR features
someone or some group with problems that only the government will be
able to solve.

I never realized that we had so many problems until I started
listening to NPR. Then I realized that most of those people with
problems would not have problems if they had stayed in school, didn't
have sex out of wedlock, tried to raise children as a single, one
earning or no earning parent, ...

> >> Why does George Bush continue to fund those idiots?
>
> For the same reasons outfits like Halliburton are funded?

Please name the other outfit(s) that can compete with Halliburton.

Please explain why Clinton gave Halliburton a No-Bid contract when
Clinton attacked Bosnia?

> with "family values"?

I believe so.

> Or the Newt whose intercepted cell phone conversation wasn't exactly G rated?

Could have been. Whatever happened to that couple that intercepted
the cell phone call?

> >They didn't - they thrived, adapting to the new situation.
>
> Fascinating!

They keep having fund raisers. Fine. That leaves them less time to
spread their socialist ideology.

> >As they
> >receive less and less government funding, they have more and more

> >they still get from the gvt
>
> >And that is the downside - less control.
>
> I don't see journalistic freedom as a downside. Perhaps some people would
> prefer that all broadcasting be like Fox - a cheerleader for the administration
> currently in power.

That is such an interesting statement.

Fox News is a relatively new news outlet in the grand scheme of
things. And they have set themselves apart; I believe that you called
it "journalistic freedom." Gosh, how awful and how successful!

Remember though, that many of the traditional news outlets have an
agenda which favors Democrats. Recall that CBS initially got the
Prisoner Abuse photos, and wouldn't run it themselves. They instead
gave the photos to Al Jazeer to run first then they ran it. Then
you've got the Dan Rather doctored documents. Why are these guys
trying so hard to damage the president and America?

Finally, I'd like to take issue with your use of the term
"broadcasting." I do not have cable or satellite television. I do
not see Fox News. Nor do I see CNN. So broadcasting it is not.

I do have ABC, CBS, NBC, and PBS broadcasts. Two are decidedly
socialist and/or anti-American.

> >I actually get my news from NPR and Reuters now.
>
> I've done NPR and PBS for years. Best broadcasting in the USA, bar none.

NPR is details oriented, and I like that. I get to learn a lot about
the socialist viewpoint.

> >Despite NPR's middle
> >to left perspective, they actually report so much more than the other

> center, whatever.

I don't.

IOW, well rounded and balanced. But I can see where some
> folks would be annoyed by hearing things that are not complimentary to the
> current administration - whoever it is.

I tire of the constant din of government solutions to everyone's
problems.

Does Michael Powell realize that BPL will pollute the public airwaves just as surely as raw sewage and fertilizer runoff pollute can our water? I don't think he does yet. It is time for him to be educated.
This is the time for all users of our HF spectrum to begin the mother of all letter writing campaigns to Congressmen and Senators. The FCC listens to those folks like it listens to no one else.
Dave K8MN
****
Well said Dave, and I know I'll probably stir up the pot a bit, but 11m falls into that HF band. If everyone could momentarily drop the a bickering between ham vs. cber, and join forces in a letter writing campaign (yes CBer's vote and write), it would be more effective - it's the vote that counts.

PS_ the same goes for bringing in SWL listener's to the letter writing event!

True enough. The Volunteer Examiners are giving Farnsworth exams
rather than the FCC/Part 97 specified Morse Code exams.

There is no such thing as a "Farnsworth exam".

The FCC is required to ensure that all exams and exam materials used in
the conduct of exams on their behalf are appropriate.

To the best of my knowledge, not a single exam in service today has been
identified by the FCC as being inappropriate or not in confomance with FCC
requirements, nor has the FCC ever directed the removal from service of any
Morse Code exam as unacceptable.

And what is "wrong" about that? It's a global economy. You import what you have a shortage of, and export what you have a surplus of. Many countries import 100% of the oil they need!

Damn right we import more oil! In the 1970's I drove a 4-cylinder compact car that sipped gasoline; today I drive several cars, one of which is a 32-valve turbo-charged V8 and pay less for fuel on an adjusted-for-inflation basis than I did 30 years ago in 1974.

Sunuvagun! Ain't economics grand!

True.

I just watched parts of Bumfights 2 and Bumfights 3. Basically, each a one-hour video of trailer trash fist-fighting with each other, males as well as females.

Each one of their votes cancels each one of yours. That bugs me, because they are almost certainly pro-Kerry.

Hopefully it will be a bad-weather day in the decision states. When the weather is bad, democrats don't turn out to vote as often. I guess that shows how much they care.

Now to keep this relevant, I will get to my point and add this:
Remember Monica-gate? Whenever I traveled to parts of Europe and Asia, I was constantly asked by people about Clinton and how Americans "feel" about what he did. Has anyone here ever gotten questions like that on the air?

Thanks, 73,
Dave

Hold on, "William! Len's opinions can be invalid because they simply
don't jibe with fact or they can be incorrect because he has no base of
experience in amateur radio.

>
> Amateurs, ARRL, FCC, Morse Code Exam.

You're kidding, right? I see one of the major problems as those who
claim they'd like to become a ham but who don't want to bother learning
some part of the material required to become one. Aside from easy, no
additional code test upgrades, the gains made in licensing overhaul are
reversing themselves.

It looks as if you're saying that if people tried to raise children as single parents or if only one or none of the parents in a marriage work, they wouldn't have problems. I'll assume that isn't what you really meant. Is it also your view that everyone who has had sex outside of marriage has problems and becomes a victim?

> Finally, I'd like to take issue with your use of the term
> "broadcasting." I do not have cable or satellite television. I do

All true! *And*, we still retain almost all of what we had in the past. If someone wants to use, say, 1950s equipment, they can do so in almost all cases. In fact, that's true all the way back to about the 1920s.

The rest of the world is slowly getting 40 meters doubled..

I am slowly getting the impression that "William" thinks that anything that doesn't EXACTLY match what he believes in is "anti-American". The ultimate litmus test, and what may be the eventual undoing of the Pubs.

Is you with us, or agin us?

And oddly enough, that is the exact same thing that he accuses the PCTA of doing. Which by the way, appears to be a favorite neo-con (old time lib) tactic. Immediately accuse your adversary of what you are doing.

>Sunuvagun! Ain't economics grand!

Y'know, Hans, at first I thought I'd argue with you. After all, from 1980 to 1997 I had cars that got more than 40 mpg in the city.

But then I saw the light, and it all makes sense....

If the USA focuses on energy independence, we won't send trillions of dollars overseas to other countries. And we won't be dependent on them to keep our economy afloat.

They might consider such actions as anti-social.

OTOH, if we buy more and more oil from them, they'll have more money to invest in our economy (buying our Treasury securities, for instance), buy our manufactured stuff (mostly military hardware) and to send their young people here to be educated.

Of course some of the people in those countries might not like the side effects of those deals. And some of those governments (like the former Iraq regime) might not exactly match our ideas of democracy. But hey, it's business, right? A global economy.

What could possibly go wrong?

>> > their own.

>> When you tell someone that their opinions are invalid based upon
>> whether they hold an amateur radio license, then that is exactly what
>> you are doing.

Not at all!

Anyone can hold whatever opinions they want.

Whether those opinions carry any validity depends on the facts of the situation
and the thought processes which generate the opinion.

For example, someone today may be of the opinion that the Earth is the center of the universe, and that the Sun, Moon, planets and stars all revolve around the Earth.

Such an opinion can be shown to be almost completely unsupported by the facts. It's still partly valid, because the Moon does revolve around the Earth.

Proving that the rest of the opinion is unsupported by factual evidence isn't saying a person can't hold the opinion, or that the opinion is "invalid".

Of course, if a person wants to be taken seriously by others, or wishes to be considered rational, that person is under the obligation to recognize facts when presented.

>Have you ever done that Jim?

I don't think I've ever written that a person cannot hold whatever opinions they want. I may have stated that if they want to be taken seriously and considered to be rational, they cannot hold opinions that are provably not in accordance with the facts.

>Hold on, "William! Len's opinions can be invalid because they simply
>don't jibe with fact or they can be incorrect because he has no base of
>experience in amateur radio.

A person can still hold opinions that have no basis in fact, however.

>> topic.

So what? Is it not allowed to point out that something is off-topic?

Where have I ever said that off-topic posting is not allowed here?

Is it not permitted for someone to tell Len that his repeating the same stories over and over is boring?

Most of all:

When have I, or anyone except Len, ever told anyone here to "shut the hell up"?

>> So when you stray to space exploration, B&W movies, bad math,
>> and lust for movie stars, he beats you over the head with your very
>> own "Off Topic" drum.

Len will "beat over the head" anyone who disagrees with any of his opinions.
That's been shown here time and again.

>> And you hate it.

Len goes off-topic more than anyone here, and has done so at greater length
than anyone. And has been doing it for years.

>Are Len's classic sphincter post and the one about the proximity of
>Russian Bear bombers his way of beating himself over the head with his
>"off topic" drum?

Don't forget the classic "feldwebel" post.

Perhaps.

I think what's being said is that people whose spouses have died, run away,
been abusive, been imprisoned or who simply cannot function as adults for one
reason or another should not expect any help.

>> Finally, I'd like to take issue with your use of the term

>holiday season.

I wonder how "William" would react to the film "Manchurian Candidate" (the
classic original, not the remake").

Hello, Hans

Having both Windoze and Linux installed on my pc, I suspect that many folks may have tried it and found out that Linux does not recognize most Winmodems. Then you may have to get the proper drivers for other devices (although Linux supports most sound cards and many other devices). I have also found out (the hard way) that Linux is not very forgiving of dogs pulling out the power cord at an inopportune time LOL. Of course, one can (and I had to) boot the Linux CD and repair the installation if all else fails (I was able to repair it twice, then the third time .... well, insert CD, boot ... etc.).

I will probably become a big user of Linux *when* I get another computer. I am not crazy about this dual-boot system. Should I remove Linux, I'll have to fix the MBR (simple), but then deal with what to do after I remove the

Linux partition (I'm using native mode). Of course, everything is backed up, but it is just messy.

Raymond,

I had to start laughing again at your comment. A neighbor was going to try to arrange an interview for me until she found out I wasn't very familiar with XP.

I got a call from her last night. Her computer couldn't connect to the Internet. I went over. She had herself logged on (as administrator - naturally she hadn't created a user account for herself. More fun to expose the whole system, right?) plus 3 of her kids. All logged on simultaneously. She had, according to her, removed the XP firewall (heck, she only had two other going - System Mechanic and something else). As I started checking settings (it turns out that everything had to be shut down for a minute or so to pick up the new Internet address upon reboot - she is on cable), I asked her when she bought the XP (her computer is getting old. Likely no more than 400 MHz and a 6 GB hard drive. I think she has 256 MB of ram). Her answer got me to snickering. I told her I had to leave and I'd call today.

I called her today and told her she better back up everything as her machine is going to shut down in 30 days. ROTFLMAO.

I *love* it when some folks think the old geezers are computer illiterate. I am also smart enough not to steal software :))

Yup. How much did the other Commisioners have, and what were their qualifications? Those are the relevant questions.

>Does Michael Powell realize that BPL will pollute the public airwaves
>just as surely as raw sewage and fertilizer runoff pollute can our
>water? I don't think he does yet. It is time for him to be educated.

I think he does realize it to a degree. But the problem is - does he really care, and what can he do about it? After all, *he* doesn't drink that water...

With all due respect, environmental protection of all kinds has often been portrayed in a negative light by certain political entities because of its cost and the restrictions it places on people and businesses. Some people have even called environmental protection "socialist" and "anti-American".

Should we really be surprised that those same political entities don't take spectrum pollution as seriously as we would like?

>This is the time for all users of our HF spectrum to begin the mother of

Agreed! But recall that it wasn't Congesscritters who gave us code waivers...

Some web sites get more Linux users than others. A lot of it has to do with content, and associations.

What difference does it make. IF the FCC is selling Ham down the tubes via the BPL and the ARRL was - 1. agreeing to it -or- 2. not powerful enough to stop it, it won't matter much longer. Soon Ham will be a bust, ARRL will be gone because there won't be a need for any members and so on. I dropped out of the ARRL a long time ago for a couple reasons. Personally, I think they got too big for their shorts, now they may have to eat them.

I met a couple of the losers who were voted in to be representatives. Man, they thought their shit didn't stink. Wonder what they'll do if the plug is pulled. They won't be able to act like big shots anymore.

Volunteer examiners will tell you otherwise.

And supposedly being a VE, you should know that.

> The FCC is required to ensure that all exams and exam materials used in
> the conduct of exams on their behalf are appropriate.

The FCC is required to ensure that what they enforce on Howard Stern
is also enforced on Oprah.

I said before the restructuring and I'll say it again, "What I fear
most about restructuring is a lack of enforcement, and what I fear
most about maintaining the status quo is a lack of enforcement."

Amateur Radio is now in it's 30th year of a lack of enforcement.

> To the best of my knowledge,

Well there you go. You're basing your opinion upon your own limited
knowledge.

> not a single exam in service today has been
> identified by the FCC as being inappropriate or not in confomance with FCC
> requirements, nor has the FCC ever directed the removal from service of any
> Morse Code exam as unacceptable.

Nor would they. It is Morse Code that is specified in Part 97.
You're going to have to try a little harder to unseat my informed
opinion.

> Steve, K4YZ

Yeh, sure. Whatever.

Sorry, WBRampage. Talk of radio not amateur related is simply not
worthwile discourse on RRAP. I wish that weren't the case, but I've
learned this from bad experience. Furthermore, David is not and has
never been an FCC staffer, and his opinion of what gets a reaction
from the FCC is merely wild West Virginia speculation.

...and I don't know a soul in Washington either, "William". ;-)

Let me recommend a good lawyer:
http://pview.findlaw.com/view/1379858_1?noconfirm=0

Dave is a former FCC staffer. He is also K3ZJ.

Are you aquainted with my pal Eric Rosenberg at NTIA? He is W3DQ.

Know any of the folks at the State Department who have been involved
with treaties involving communications matters?

If you sit in the middle of the Ohio flatlands without a clue on
something, it must be easy to feel that nobody else knows anything about
anything.

Someone said voting for Nader was helping Bush. So if that will help
Bush win, then I'm voting for Nader.

That's eminently "curable", it's called wipe and install upon receipt.
Pop for the right hardware and the rest is in your hands. And to hell
with what an O/S costs, operating systems are like wives, either ya
can live with 'em or ya can't and what they cost don't matter.

> You
> don't save much if anything by specifying no OS or Linux. Look at what Dell
> wants for a bottom-of-their-line desktop. Then note what OS comes with it.

With all due respect to Dell they can stick XP Home Edition where the
sun don't shine. FreeDOS? What?!

Intersestingly they do offer Red Hat in some of their low-end gems.
There's definitely a slow drift toward Linux underway but I dunno what
home users are doing with 'em. Besides maybe running Open Office and
surfing around. They certainly are not putting together Cabrillo
format files with any Linux logger tonite for submission to CQ after
this weekend's SSB orgy. 10 & 15 were wide open, one single op local
posted 941 Qs on 10 and 1301 on 15. Unfriggingbelievable at this point
in the cycle!

> -Old versions of various OS's are out there for free, or almost free.

I paid $150 for a legit, registered clean-install CD full of Win 2000
Pro and I'm gonna move it from 'puter to 'puter until either hell
freezes over or I move to Linux.

> -Lots of folks are stuck with whatever OS the IT folks at work decide is

Of course. But yer average non computergeek type isn't going to toss a "free" OS and buy another. Particularly when the "free" OS comes bundled with a ton of other stuff and can run almost anything in Microcenter.

>And to hell
>with what an O/S costs, operating systems are like wives, either ya

Not really.

Suppose a building is designed to withstand a direct hit by a fully loaded 747
at max speed. And the sprinkler system is designed to put out the resulting
fire. Answer: Hit the building with *two* 747s. Or three. Or whatever.

>All it takes is the will and the money.

See above. Fudd's First Law of Opposition still holds (1)

>limit to self supported weight.

??

The problem wasn't that the structures couldn't stand the impact. They did.

The problem was the fire, which so weakened what was left of the structure that
it collapsed.

The "old paradigm" of tall building construction was that the strength was in
the internal skeleton of steel girders. The WTC used the outer wall as the
skeleton. That's why the windows were so small. Result was that there was a lot
more internal unobstructed space.

One of the amazing things is that the towers both collapsed straight down.
Imagine if they'd fallen over.

>>>>btw, one of the reasons so many firefighters were lost was due to their

Good question!
>
> (and no, I don't believe that for a moment)

If a radio system depends upon repeaters, then those repeaters have to be
incredibly reliable, because their failure results in loss of the entire
system.

Third bingo!

>There are two ways of becoming wealthy.
>
>1. Work hard, manage your money well, educate yourself, and you will
>likely prosper.
>
>2 Make those around you poorer! 8^)
>
Yep.

Here's my take about the connections:

- After WW2, US industry was sort of schizoid. On the one hand there was focus on "the future", but on the other, there was incredible resistance in accepting new ideas and concepts. A lot of that had to do with the installed base. Meanwhile the competition in Europe and Japan had been mostly bombed to rubble, and so had to be rebuilt.

- The paradigm all through the 50s and 60s was of unlimited growth and inexhaustible supply. Most of the "professionals" didn't think we'd ever run out of cheap easy resources - and didn't plan for their loss.

-Fascination with and Cold War mentality about new "high tech" industries like "aerospace" diverted resources away from basic industries like automaking. So we had the best aircraft in the world, but a surface transportation system that was not looking to the future.

Look at the progression of US carmaking in the '50s and '60s. Bigger and more powerful, but in most cases built on the same old concepts. Safety? Economy? Pollution control? Quality control? All were mostly pioneered by foreign automakers and had to be forced upon the US automakers. That's because they were primarily focused on selling the sizzle, not the steak. The original Ford Mustang is a classic example.

Now we're doing it all over again with SUVs.

The corrupt bunch at ARRL HQ full well know their days are
numbered. ARRL is a shrinking organization, and with that in
mind, ARRL big wigs have been skimming off the profits for years.
Upper level ARRL types will enjoy a cushy retirement, at the
expense of all you suckers who have faithfully paid your sucker
dues each year. What is ARRL management's biggest fear?
A top to bottom audit by an unbiased outside accounting firm.

Remember incentive licensing? Remember cash contributions
to the HQ building fund in the 60s? Remember how the league
refused to bulk air mail QST to members in Hawaii?

> . . . .
> 73, de Hans, K0HB

I don't find it odd at all.
First, people have hobbies. Some are model railroaders, some are quilters, some are amateur radio operators. Some are all of the above.
Second, people get involved in different aspects of that hobby: Model railroaders may or may not be interested in computer control of trains; the interest may be in building or scenery. Hams may be interested in electronics or in operation; they may be into DXing or QRP; it may be "boat anchors" and pre-transistor.
Third, people use the the computer for as many different reasons as people get involved in those hobbies: They may, in fact, be as deep into programming as it takes to be interested in Linux, or they may be "dreaded appliance operators."
In the case of computer users, most probably look upon it as a tool, a way to connect to people and information. Right now, the quickest, least involved path is to buy a Windows-equiped PC for $500-1,000 and hook in through a pre-configured provider, either local or national.
Linux is almost a "way of life," followed by those who probably walked in the footsteps of Steven Jobs and worshiped Macintosh <grin>.

here are a few possibilities --

Most computers do not come with Linux, and very few computer users have ever
actually replaced an operating system.

Newer copmputers tend to come with "Winmodems" and these so called modems
(really just a modified sound card) do not have open or documentated
interfaces to allow Linux developers to a driver for them.

Some Linux users (like myself) might be setting our browsers to report that
we are using some varity of Windows and IE to trick sites that only allow
that combination to browse them.

> I don't find it odd at all.

Let's not forget that when small computers came along thirty years ago,
hams were a very noticeable portion of those who got them early. Many had
the background, be it hardware or software, to plunge in early. While
the Altair 8800 is often listed as the first "home computer" (and I
don't deny its importance), there were some kits before that. The Scelbi
was an 8008 based computer, and while I didn't notice it at the time, they
ran an ad in QST at a time when very few were thinking of having a home
computer.

Byte was created by Wayne Green, and when he lost that magazine, he ran
a computer section in 73 until he launched his second computer magazine,
Kilobaud.

Three years after the Altair hit, packet radio was being demonstrated.

And I think Hans is making the case that ham radio has traditionally been
a technical hobby, to some extent for everyone, and it does seem odd that
they don't want to get their hands "dirty" when it comes to computers.
The fact that the source code has to be available for Linux means that
anyone can modify the software to their liking. Oh, it can be done without
the source, but it's much easier if you don't have to take apart the software
first, which is what I used to have to do in order to fix even simple things.
Even today, people who wouldn't consider themselves technically able keep
asking about "mods" for their two metre rigs.

An acquaintance has a teenage daughter, who's laptop stopped working.
I'm called in to fix it. The thing was so lousy with spyware and home
page hijacking software that it just wouldn't work any more. Lop.com was
the main offender, but there were several hundred cases of spyware on

it. After spending several hours of eliminating the things, I talked to both of them about the dangers of unsafe computing, and to avoid things like Napster and other file sharing services, AOL instant messenger, screen savers, and anything offered for free. I installed Ad-Aware, and showed them how to run it Even installed ZoneAlarm.

She disregarded every one of my suggestions, and turned off ZoneAlarm It's like so.... Oh....whaaatevaaa!" Within a week, she had the computer as screwed up as before. Then she goes to her Pa's computer, and proceeds to do the same thing to it! "Oh daddy! Those stupid computers are broken again!".

Major difference this time is that I was "too busy" to fix it. Cuz ya can't fix stupid.

I don't know if it can (or can't) do anything to enhance your experience
as a HAM.

I just bring up the point because I would expect hams, with their
"tinkerer/homebrew" mindset, would tend to steer them away from
welded-shut 'consumer class' OS's into something where they'd be able to
prod around in the 'innards'.

It's an interesting question, Dave. I think that the best thing we can do is to provide a supportive environment for everyone.

There is an ongoing effort to recruit underrepresented groups to the engineering fields. There are very few female engineers and few that are in college. This despite lots of effort to recruit. There has been some limited success in recruiting people of African descent.

I suspect that Engineering will take a while to be more representative from a ethnic standpoint. I do believe it will eventually get there. And as more minorities are involved in technical matters, more will be interested in technical hobbies like the ARS.

As to gender representation, I have noted that not many women *want* to be engineers. I would also note that the women engineers that I know absolutely HATE being called a "woman engineer". One I know sums it up as "I can't stand it when people call me a woman engineer. I'm an engineer dammit!" So the typical recruitment efforts may indeed backfire when applied to potential engineers, at least of the female variety.

Okay, I confess. I'm going to install Linux on an old laptop so it can be used as an Apache server for next Field day, so we can have all our computers use logging software that is network savvy.

And I will learn what I need to do to do that.

But really, I don't think that Linux offers Hams as much in the pursuit of their Hamminess as does Windoze. So a Ham that uses Linux is limiting themselves right off the bat. Of course, they could program anything they want. But there is only so much time, and maybe not that many hams that want to program custom software.

You know, actually it doesn't. Some pollution is inevitable. We humans aren't going to put ourselves out of business as a species. There must be and usually is a balance between human needs for doing a thing and our need to protect ourselves from fouling our nest.

The ARRL has come up with a pretty good plan. It encourages anyone to become a radio amateur. That inlcludes those of any racial group, those of any religion, those with no religion and those of the several genders.

> What do ham radio clubs do to
> promote ham radio among minorities?

Is it your feeling that a minority needs a special welcome. I know of no club which bars anyone based on their minority status. I no of several which are "membership by invitation only". The bar there is whether one has DXCC or is a serious contester. Neither race nor gender matter.

You must have, "William". There is serious talk of an entry level
license. That'd be one more than we have now. Getting rid of the
Novice license was a serious mistake. What was needed was a revision of

Novice privileges.

Quite a number of hams have come up with good Windows programs. There's nothing to preclude any of us doing the same.

N4PY has come up with great rig control programs for the Ten-Tec Jupiter and Orion. N3EQF has developed a nice logging program and has taken it from DOS to Windows. I don't find the operating system my prime area of interest in computing. I maintain several machines on a home network. Some of 'em run Windows XP Professional and some Win98SE. One machines is devoted to amateur radio and the internet. One is dedicated to mulitmedia (digital photos, digital video (editing, effects, DVD production) and sound (home music studio, recording, editing). Others are general use computers. I've had in the past some dual boot machines. In my working life, I've used Unix machines along with Win98 and WinNT boxes/networks. I have no need for Unix at home. If there was more in popular software available for Linux, I might take the plunge. As things stand, I likely will not.

Hi Hi,

I too worked several of the G stations in the ''new'' band. Really nice and
clear. Most were just above 7.1, I would suggest the Europeans move up
even higher in the major contests and when they are looking for DX phone
qso's split.
It was much cleaner about 7.140 plus / minus the one broadcaster I heard.

I have been licensed since 1961, and have seen 40 meters basically
destroyed by the broadcast garbage, I hope I live long enough to FINALLY
see it opened up and be able to work Europe without going split on phone.

The real question here is why would anyone care? Tell me...how can you tell
a persons color while on the RADIO??
And what difference does it make anyway?

This is obviously a troll. If it isn't then you are one sick puppy.
Probably a Democrat.

In the last hours of CQWW on sunday OD5NJ was running a split on 40 stating his QSX QRG at 7307. Certainly he means 7207, right? But a check at 7307 reveals a moderate sized pileup of K/N/W's calling away..... ......and OD5NJ happily working them!

The pendulum must be swinging backwards. When I was in engineering
school 50 years ago we were lucky to have one female student and
one student "of color" in a class of 100. From my observations at
the school from which I graduated (one of the top three in the US),
twenty years ago the female students outnumbered the male students
and a majority of the students today are from groups which were/are
considered minorities, largely Asian and other peoples "of color".

Hello Dave ....If they live in the mid-Mon Valley or in SW Pa. (if they want to drive) have them e-mail me at KI3R@arrl.org. for the no-code Tech course info offered by the Monessen ARC which starts in January. Hmmmmm let me think ....Why would a "person of color" want to be a ham ..... maybe just maybe its because it is a lot of fun.

God Bless and 73 KI3R Tom Popovic Belle Vernon Pa.

Interesting! I've been at a prominent university for just about 27 years now, and I have never seen any case where the females outnumbered the men in engineering classes, even though the university population is over 50 percent female.

Certainly at UCLA, they have a different situation:

http://www.joannejacobs.com/mtarchives/014477.html

When we have the Bring your daughters (and sons) to work day, for the last few years, none of the young ladies wanted to be engineers. Most wanted to be lawyers.

I have often thought that the engineering "lifestyle" has been one of the worst advertisements for the profession.

Become an engineer, and you get to:

Work long and uncompensated hours

be looked at as a major oddball by a large segment of the community. I wish I had compiled a list of all the engineer disses I've heard over the years.

And if you are successful as an engineer, you get to choose one of two paths. Choose to enter management, and essentially stop being an engineer.

or

Continue to be an engineer, and continue to be a subordinate.

Guess who makes more money?

Years ago, I needed to make the choice between becoming an engineer, or becoming an artist (who also had technical duties) Guess what won out?

My wife is a non-degreed electrical instrumentation and power
engineer (3 years of engineering school before she ran out of money
many years ago, the rest O-J-T) and one of her contemporary work
colleagues is a structural engineer who is one of the limited
number of folks nationwide who is an expert on antenna and powerline
tower construction.

For a while in college I hung around with one of the female
students who later became one of the real brains in defense
aerospace engineering, and after grad school I was engaged to
a young lady who was studying nuclear engineering.

This was over 40 years ago but they're out there if you look hard
enough.

No, no, no. When I became a manager I got to do both, because
"they" didn't hire/assign a replacement for my engineering job.

>or
>
>Continue to be an engineer, and continue to be a subordinate.

I had the "joy" of being a subordinate to the same person both as an
engineer and as a manager. Makes it difficult to sort things out.
>

Been there, done that, have the scars to prove it. In reflection,
the small amount of extra money wasn't worth the stress and strain
that came with the ride-two-horses-with-one-saddle management position.

One of the many reasons that I took early retirement when it was offered.

I observe a lot, and one observation is that early retirement is seldom
a bad thing! A few less dollars per month, but so what?

But you may have this in reverse. If people aren't playing with amateur
radio as kids, then they may not become interested in technical professions.

Some people grumble that amateur radio doesn't represent leading edge
technology anymore. But I still think there is value as a stepping stone.
If kids take up the hobby, and then pursue technical fields (or even
just feel comfortable around technical matters) it still has value to
society in general.

The value of amateur radio may be where it leads, rather than being
something that attracts people who are already somewhere.

"Dave" <Dave@maildaveatrs.com> wrote in message news:<cm5gc8sqr0@pita.alt.net>...

> What has the ARRL done to encourage minorities to take up
> ham radio as a hobby?

Are they under some legal obligation to encourage ANY subset of
our society to take up Amateur Radio?

>What do ham radio clubs do to promote ham radio among minorities?

In the clubs I belong to, they post public announcements in the
local papers that ANY person can read and decide for themselves.

>Why would a person
> of color want to become a ham radio operator?

Why wouldn't they?

Does skin color, ethnic backround, religious preference, sexual
orientation, etc etc generally predispose one to liking or not liking
ANY particular sport, avocation, hobby, occupational field, etc etc
etc???

And if it did, shouldn't it be the decision of the person to whom
such color is attached make the decision as to what THEY want to do?

Why should any group, club, etc, specifically recruit
"minorities" if the sole purpose is to have a token in that group?

(BTW...I find it a bit amusing to refer to persons of African
heritage as "black", yet call them "persons of color", when in strict
scientific definition, "black" is the ABSENCE of color!)

Personally, I want to "hang out" with people who share like
interests, opinions, etc...Not ones who are there because they were
compelled by some legal mandate or recruiting quota to be
there...Color, gender, religious preference are inconsequential in
those contexts...To me, anyway.

The Constitution and it's Ammendments make it illegal to
"discriminate" against any person based on the aforementioned
criteria. There are precious few circumstances in which any subset of
our society may be admitted or excluded based soley upon gender,
ethnicity, etc, and those are carefully delineated by law.

After that, it should be up to the individual to decide s/he
wants to do with their life, including persuing licensure in Amateur
Radio.

At least for me, it's an exercise in living on about 1/3 of my
former salary -- in the Federal system with 30 years' service, basic
retirement adjusted for survivors' benefits is 50% of salary (it's
not a "gift" or "welfare" - we were required to pay into that with
after-tax money) and my ex gets 1/3 of that.....life and medical
insurance premiums, however, are not reduced from what they were
when I was on "active duty" and Social Security (I am fully
qualified from 15 years' private sector employment before and after
my Federal employment) is only about 20% of what I would have
received were I not receiving a Federal pension.

Don't get old..... <ggg>

> Linux 33 0.54 %

gee,
I must be smarter than the average ham (probably not).
I must point out though, most browsers in the linux line can be easily configured to report client info on OS other than as linux. I know this because I have mozilla setup to report as "mozilla (Mozilla-win32 for windows 2000)" because some places I go will not operate properly for anything now "windows centric".

For most places though, I use lynx (text only browser) because I am visually impaired and find most graphically oriented sites hard to navigate (sometimes impossible). Thus with lynx, if I stumble across one of those, I just drop it and move on.

However, that digresses from the point here. The point is: I am a linux user and I am sure there are a lot of others.

besides, if anyone wants some technical assistance with linux, I am more than willing to help (for a small fee, or perhaps a trade for something else worth my time or sometimes, because its helpful to just be helpful).

Setting up linux isn't all that hard either. It does require a little more know-how than the average windows user needs to install a windows OS, but not terribly much more..

In the meantime, the stats you have may need to be examined a little more closely.

Just my thoughts.

WINE = Windows Is Not Emulated. Wine is actually a Windows API for linux (API = Application Programming Interface). Think of it as a simplified execution Environment. WINE can't do all that windows can do, but it some ways, thats better than windows can do.

Still, welcome to the linux fold.

BTW, what database proggie is that? there should be some equivalent in the linux world somewhere....

hmmmmmm. I already have Mozilla T-Bird doing that (I tell it to open emacs in terminal and emacspeak runs in that term session). its not that hard really, though navigating Mozilla T-Bird is a pain in the butt at times with a keyboard (I hate mouse centric tools).

Mandrake is perfect for the beginner linux user. However, it does leave a little to be desired when it comes to more advanced tools. :(

Farnsworth spacing is one way of sending Morse Code. It's been around for
decades and has been recognized by FCC and the ITU as meeting all the
requirements for the Morse Code test.

IOW, Farnsworth spacing is a subset of the set of ways to send Morse Code. So,
by definition, all Farnsworth-spaced Morse Code *is* Morse code, even though
all Morse Code is not Farnsworth-spaced.

"Lloyd" has been advertizing this:

My dearest fellow underaged child lover,

I am a fan of child pornography and for the past 14 years,I have been
able to gather quite a collection of it.
I have pictures, VHS tapes, posters, audio recordings, and games based
on child pornography.

I am selling my products (or trading for other child pornography).

I have a complete color catalog of all products now available. You can
purchase pictures (both normal kodak and computer JPEG's). Also, you
can purchase posters, VHS tapes, used boys underwear, and audio
recordings.

There are many products and services. Here are some prices:

Complete Color Catalog (160 pages).....$5.00
100 Pictures Little boys age 7-12.....$9.95
120 Pictures Little boys age 13-17.....$11.95
VHS tape, little boys "Bath Time for Uncle Lloyd".....$49.95
VHS tape, little boys "Happy B-day, Uncle Lloyd".....$49.95
VHS tape, teenage boys "Naked Pizza Party!".....$49.95
Personalized Audio tape.....$2.99

If you have child pornography, preferably little boys ages 7-9, I will
trade or buy them from you. If they are action shots, of an adult with
a little boy having sex, I am willing to trade big, or pay you a lot.
Please write to me for more details. Thanks.

You can send cash, checks, or money orders made out to FUN WITH
CHILDREN.

Please send your order to:

Fun With Children
c/o Uncle Lloyd
710 SOUTH CLINTON STREET #202
ATHENS, ALABAMA 35611

And it appears that even you have a complaint wrt the amateur service.
My goodness, just after Jim says everything is rosey!

Jim tries to take an opposite position from me, just because it was me
who said it. Typical bad attitude Extra.

Anyway Dave, I agree with you (and Hans) that we need a legitimate
entry level license. bb

I saw some JA's doing that on Guam during CQWW91. When 10M shut down,
I found their hotel, followed the cables, and knocked on the door.
Their network was wired.

> And I will learn what I need to do to do that.

About two hours before the opening bell I bring my station out of
cold-iron status with a final check of antennas, software, etc.

In the final hour before the test I tune all the open bands and populate
my bandmap with all the rare-mult stations who are 'place-holding a
spot' for the opening bell. In the first 15 minutes or so of the
contest I work that bandmap before all the cluster-lizards find and spot
them.

It's about a very specific very narrow combination of hobbies.
Tinkering with computers a hobby for many. Some computer tinkerers
have ham licenses, some don't. Some computer tinkerers with ham
tickets are into Linux, many more are into Windows and also tinker
with, say, PSK31, DSP and moonbounce. The number of possible
combinations of technical interests folk have on a hobby basis isn't
infinite but it's certainly in that direction. Then comes the vast
majority of hams who have little or no interest at all in any form of
tinkering and are running Windoze by default and have logged into your
website. On this basis I'm not particularly surprised that you've only
drawn three Linux users.

Now put some articles on "Linux for Hams" in your website then stand
back . . .

The league just doesn't "get it", do they? See
http://www.arrl.org/news/stories/2004/11/01/4/?nc=1

Rather than spending hundreds of thousands of our dollars chasing a POLITICAL resolution to this issue where they have gained no traction and which they can't possibly win, why don't we take the money we spend on Sumner and Imlay and hire a bunch of Ed Hare's and do the SCIENCE necessary to discredit BPL. Haynie/Sumner/Imlay are political lightweights giving Amateur Radio the image of a bunch of obstructionist amateurs (lower case amateur).

...and it appears that the "William"-mobile can only go to the left or
right at ninety degree angles. That makes taking life's curves really
tough. Maybe you thought Jim and I carefully aligned our positions
before posting. We do have a really good system. Jim posts what he
believes and I post what I believe.

> Jim tries to take an opposite position from me, just because it was me
> who said it.

Is that what you really believe?

> Typical bad attitude Extra.

Bad attitude Extra=anyone who doesn't go along with you.

I don't find you typical of General Class licensees. Would you care to
put forth any additional sweeping generalities?

> Anyway Dave, I agree with you (and Hans) that we need a legitimate
> entry level license. bb

Congrats on partial enlightenment.

Dave K8MN

These are the number of unexpired FCC ARS
licenses held by individuals on the dates listed:

As of May 14, 2000:

Novice - 49,329
Technician - 205,394
Technician Plus - 128,860
General - 112,677
Advanced - 99,782
Extra - 78,750

Total Tech/TechPlus - 334,254

Total all classes - 674,792

As of November 1, 2004:

Novice - 30,061 (decrease of 19,268)
Technician - 264,149 (increase of 58,757)
Technician Plus - 55,582 (decrease of 73,278)
General - 138,482 (increase of 25,805)
Advanced - 78,344 (decrease of 21,438)
Extra - 105,867 (increase of 27,117)

Total Tech/TechPlus - 319,731 (decrease of 14,523)

Total all classes - 672,485 (decrease of 2307)

From what I've seen in schools and in the workplace, the number of
non-white-males in engineering is definitely on the increase. But it's
still got a way to go before the ethnic/gender background of the
engineering fields matches that of the general population.

All valid points. Here are some more:

- In engineering, there's a good chance your particular field may
undergo radical changes in employment levels.

- Getting an engineering degree not only requires taking lots of math
and science courses, but also pretty much requires that you have a
good background in those courses from high school.

- The reward system is unbalanced in ways beyond pay compensation. For
example:

Example 1: Suppose an engineer set out to design, say, a system to
turn sewage and garbage into fuel, and do it practically, profitably
and cleanly. Suppose s/he succeeded, and the result solved two
problems at once. And suppose said engineer got patents to protect the
rights to the process.

Those patents would only be good for a limited time (14 or 20 years,
depending on the type of patent) and once they were gone, anyone could
use the process. Improvements to the process could make money for
other people, too. So the engineer had better make his/her money
quick. But the only way to make money from the process is to build
actual functioning recovery systems, or sell/lease the right to do so.

Suppose a writer wrote a book about an engineer set out to design a
system to turn sewage and garbage into fuel, and do it practically,
profitably and cleanly. And suppose said writer copyrighted the book,
and the book was a success.

The copyrights would be good for as long as the writer bothered to
renew them, and the writer's estate could continue to renew them for a
considerable time after the writer died. Rights to a movie version, TV
series, and other media not yet even invented would belong to the
writer unless sold or leased. The writer could make money for a much

longer time than the engineer.

The engineer's process would actually have to work. The writer's book could be pure fantasy.

Example 2: How many TV shows, movies, books, and other media do you see today or in the past 40-odd years that are about the law and law enforcement, or medical care? How many about any sort of engineering or technical jobs?

Looks like a lot of Advanced hams are moving up to Extra. Hate to see the Novices going away. We need the Novice license re-instituted, with 50 KHz sub-bands on the 5 major HF bands (plus 50 kHZ of phone rights on ten meters), coordinated with world-wide beginners' license frequency allocations. The new Novice ticket should be simpler than the old one - more like back in the 50's and 60's. It should be good for 5 years, non-renewable. Existing Novices should get the 5-year time-to-upgrade when the new Novice license is instituted, saving the FCC from having to keep track of "old" and "new" Novices in their policies and procedures. Of course, when BPL gets rolling, it will probably all be just academic.

When did I claim such things were "needed"?

I still think those things are good ideas. But the chances of FCC
actually creating them are virtually nonexistent, so I've put my
efforts into things that actually have a chance of becoming reality.

> > And BPL is such a minor thing...

Where did I say it was minor?

What have *you* done to oppose BPL?

TV shows, movies, books about your vocation are part of your "reward system"? Wow! Next compensation cycle I'm going to put my engineers pictures on TV rather than give them a pay raise. I'm sure they'll be thrilled!

I bet you're damned glad you're not a farmer, a well driller, a plumber, a purchasing agent, a mail carrier, a diesel mechanic, or a grocery store manager! They don't get on TV very much either!

TV shows, movies, and books are written to entertain mass audiences, not to be a "reward system" component.

Yes, law is much more glamourous than engineering. Even though few
engineers these days "get their hands dirty," this field of endeavor still
has an image of not being an office job even though that is false as far as
actual practice goes.

That is certainly true. Fields like law are viewed as being more stable.
While I've always managed to stay in engineering, I've worked in the
aerospace, nuclear, and automotive fields.

Odds are the engineer will only get his normal salary plus a one time bonus. In general, it takes time and facilities to develop something and this means working for a company. In most cases, you have to sign the patent rights over to them.

These are embedded programs. An example would be a ZIP-code-address
or telephone book lookup database or an organizational membership
database. You get the CD with an install program - if it doesn't
find WinDowz it doesn't install. Fortunately my main tool - Pike
and Fischer's Communications Regulation Service - uses the Brief
database which will install on Win 3.1, a version of which (WinOS2)
is provided for in OS/2. I'd be lost professionally without that
one.

I got fed up with RedHat's continuous sales assault (I have legit
RH7 and RH9) and of course the last straw was when pushed the
Enterprise Edition by dropping updates and support of the Personal
Editions.

I've got a subscription to SVISTA, the OS/2 version of Virtual
Desktop, which will let me run Win and Linux programs on my OS/2
box, but I've yet to install it.

I thought he was talking about enticing kids into professions. If you
see crime scene investigators on tv, and most portrayals will show
them as "cool", then that will make kids say "when I grow up, I want to be
a ...". It's advertising, not reward.

There's that story of Mae Jamieson, the astronaut, who says she decided
to become one, maybe even realized she could become one, from watching
Star Trek as a kid, and seeing "Lt. Uhura"; a woman, and black. If there
had been only men, only white, on TV, she might not have seen that she
could become that.

This whole thing is similar to amateur radio. If it's not out there
in the public eye, then few will find their way to the hobby. Reading
about Field Day, or anything else, isn't a reward for being a ham, but
an attempt to portray the hobby to outsiders, and hopefully in a good
light.

I don't know how many years ago it was when they made the Novice renewable and allowed 200W operation. However, they also made the test more difficult, which cut out many of the younger amateur radio candidates. My experience has been that pre-HS students usually don't have a problem with learning code. But the more difficult theory requirements are a problem for them. The entry-level license should be feasible for the majority of junior high students and precocious elementary school students to pass. Keep the privileges restricted (CW, PSK, and a very limited phone section). If other countries did the same thing and it was internationally coordinated, the beginners would find DX opportunities in their band segments and that would add to the attraction. By the time kids hit high school, there minds are on a lot more that radio; the recruiting needs to start early, and a simple test with a restrictive license is the answer. It was once that way and it seemed to work.

What "grade schoolers"...?!?!

Fred owns "QRZ". It's not a public entity such as ULS.

This is yet another form of peer pressure. K1-MANiac insists on acting like an idiot on the air and constantly flipping off the FCC...OK...that's HIS schtick...But Fred doesn't have to help promote it by allowing Baxter the chance to "promote" himself on QRZ.

I say bravo, QRZ.

Hello, Jim

Yes, Tim, WB2KAO, and I were out to the Antique Wireless Museum, but that was back in the 60s. Now I can't think of the gentleman's name who had the place back then (silent key a few years back). Yes, he fired up one of the small spark gap transmitters :)

Best regards from Rochester, NY

Produce the citations for the medals that you have. If the name on
them is not John F, Kerry, I'll retract my statement.

Best of Luck.

Hello, again, Jim

I forgot to comment on the pending telephone call. I will be too busy, I'm sure. I fixed her up about a year ago and explained the importance of anti-virus and firewall (which I installed for her - free AVG and ZoneAlarm). Well, she had a problem and took it to her tech. Perhaps 5 months ago she called. The computer was stuck on a porn site and she was certain it was her kids. Well, her tech removed the partition, reformatted the thing as one single drive, didn't set up the virtual memory properly, and did *not* put the antivirus back in nor the firewall. There was so much stuff loose in that thing. After initial cleansing of the machine, I couldn't change the home page. Attempting to run regedit resulted in the message "the system administrator has disabled this" - in Win98. I had to do an on line scan and then was able to change the homepage to "default" (Microsoft). I was then able to edit the registry and get her home page back. It was running fine. Then she goes and gets a copy of XP and puts it in there.

Maybe we could chip in and buy her a used model 28 ASR - perhaps she could make a punched tape baudot backup of her disk LOL.

I just hope when she calls that I can explain that I am busy without busting out laughing. How many times does she have to mess that machine up before she learns her lesson? The best thing for her is to have someone set up the machine and set up an account for her and *not* give her the administrator password. Assuming she ever purchases an operating system LOL.

Hello, Lloyd

Unfortunately, flame-wars can erupt over sensitive subjects and if someone is drawing attention to himself and/or his actions which some may find exceedingly objectionable, there comes a time when an owner has to make a decision. Either the person has to go or the site itself may end up going. Easy choice.

You've been going out of your way to impersonate Len Anderson of late.
I've never announced a listening frequency outside an amateur band in
the entire time I've been a radio amateur.

If you'd like to tackle this issue, let's do it. OD5NJ was breaking no
regs at all announcing that he'd listen on 7.307 MHz. In the scenario
Hans described, which stations broke their country's regulations? If
I'd been heard from Botswana on 40m, CQing North America and announcing
a listening frequency of 7.150 and you responded to me on that
frequency, would you bear personal responsibility for the operation of
your station, or would you try to pin your mistake on me?

For a youngster, the 1993-1997 Novice question pool is not a "joke." The test had fewer questions back 1958 when I took the Novice test, and the questions were mostly about regulations, basic definitions, and Ohm's Law. Enough knowledge was required that someone who passed should know the rules and a few very basic technical things. I'm guessing that there were 20 test questions back then. It was enough of a test to assure that the licensee could get on the air knowing what they could and could not do as an operator, and what the punishment might be if they violated the regulations. That's really about all a beginner needs to know. The Extra class back in those days was a much more comprehensive exam back then, requiring hand drawn and labeled schematics for one section of the test. I thought the Extra test in those days was much tougher than the First Class Commercial exam, even though it conveyed no more privileges than the General license did. Anyhow, the Novice should be a starter license, only difficult enough to assure that the new ham has a handle on the rules and what makes up a station. A few questions on safety are also appropriate. No, I don't think we should go back to requiring only crystals for frequency control. HI

ak

The test are to dumbed down, what you wont to do is just hand them out for the asking. Might as well hand them out the License, and the Test doesnt mean much anymore anyway.

Babbling Brucie hasn't changed, and still hasn't learned to read, let
alone master the English language well enough to compose a literate
sentence.

Here's some advice Brucie - quit mixing the Jack Daniels and Viagra.
It's turning your brain to mush and your penis into something that
looks like a piece of uncooked spaghetti.

Sounds dramatic, but it's a patently false premise. If qrz.com knows anything at all about configuring their server, they also know how to limit anyone's ability to post information to their site. K1MAN, for example, could be left in the data base as a read-only entry and could be disallowed from posting (if that's how the alleged abuse took place).

K1MAN, on the other hand, can continue to abuse if he really wants to by means of false identities or by convincing other users of qrz.com to post material he has authored. K1MAN is not doing that, which tells you who is taking the high road.

Sure qrz.com is a private site, and the owner(s) can do what they want with it. But telling lies about why they are taking a particular action is quite another thing.

Suuuuuure it was.....

> Well, her tech removed the partition, reformatted
> the thing as one single drive, didn't set up the virtual memory properly,
> and did *not* put the antivirus back in nor the firewall.

omigawd

lemmee guess - this same machine is used by everybody, so it has a
combination of extremely important and personal stuff like finances,
and extremely replaceable stuff like games, all on the same machine
and accessible to all users. Plus wide open to the internet and online
at all times. And there's no protection for any of it, nor any backups
or updates except what you do.

> There was so much
> stuff loose in that thing. After initial cleansing of the machine, I
> couldn't change the home page. Attempting to run regedit resulted in the

> she learns her lesson?

"Somebody has always been able to fix it before"

> The best thing for her is to have someone set up the
> machine and set up an account for her and *not* give her the administrator
> password.

Yup.

> Assuming she ever purchases an operating system LOL.

The sad part about all this is that for about $500-600 or less she
could have a *new* low-end Dell or other box complete with legal XP,
firewalls, networking, etc, and about 10 times the power of what she's
using now. Also antiviral updates.(Dell website sez their 2400 is
under $500, has 2.4 gig Celeron, 256 meg ram, 80 gig HD, 17" monitor,
etc.) Or pick up a good clean used or closeut one for even less. (Not
a sales pitch for Dell; there's lots of other good deals out there).
Beyond a certain point the old machine should be passed on to other
uses.

But even a new computer won't do any good if the firewalls and other protections are disabled.

The next thing she's gonna want is a wireless network. Wanna bet every protection and password will be left on default?

Us taxpayers already paid for the science end. I suggest you look up
the original out-on-the-streets work done by the NTIA. Which probably
cost more to do than League can possibly afford then the politicians
strangled it for their own purposes. So BPL at this point is *all* a
political and legal problem.

It's there and better than ever. You owe it to yourself to take a
look; it's not that far away! (It's like going to R-town and never
eating at Rick's or the Dinosaur BBQ).

But the museum is just the tip of the iceberg. The annex is about a
mile east of town on 5&20, and is several times the size of the
museum.

> Now I can't think of the gentleman's name who had the
> place back then (silent key a few years back).

Bruce Kelley, W2ICE. Pre-WW2 W8ACY (WNY was 8-land before 1945), licensed in 1929. I never met him but I worked him many times on 75 AM. A fine gentleman.

The folks at the museum and annex were very nice to me - a complete stranger and nonmember of AWA. Well, a former nonmember.

> Yes, he fired up one of the small spark gap transmitters :)

The one they have in the museum isn't small. And yes, it works - into a dummy load, of course.

The museum hours aren't many, and are even more limited in winter. I lived a couple years in Wayne County (1977-1979) but never knew it was there. My bro-in-law was married in the church across the parking lot from the museum.

I still miss Palmyra.

The FCC still hasn't updated its regulations on U.S. amateur radio
(Part 97, Title 47 C.F.R) in regards to test element 1 on morse
code. The referenced CCIR document has been superseded by
the ITU. Neither is there a specific definition of "word rate" that is
clear and unambiguous.

A past FCC "decision" was the tacit "approval" of VECs to allow
Farnsworth spacing in testing, yet that has never been officially
approved (except by the ARRL, the other "officiating" body in U.S.
amateur radio) nor does it appear in any regulation errata or other
corrections. The appearance (on the surface) is that Farnsworth
spacing is "legal" simply because the FCC hasn't bothered to
correct its own regulations for over a dozen years.

"Dave" handles his emotional belief system in the barbarian's
way - either Believe in Him and His or be subject to all kinds of
heckling, cat-calling, personal insults, and the like. It is "Dave's"
Way or the highway. "Dave" is Boss. Quod Erat Demonstrandum.

"Steve" says he's a VE and he's OK. :-)

>And supposedly being a VE, you should know that.

Whatever "Steve" does is OK. Under "Steve Rulez."

>> The FCC is required to ensure that all exams and exam materials used in
>> the conduct of exams on their behalf are appropriate.
>
>The FCC is required to ensure that what they enforce on Howard Stern
>is also enforced on Oprah.

According to "Steve," the FCC pays a lot of attention to what a bunch
of radio hobbyists do in the service of their country...

In reality there is a difference story...but the fantasylanders don't
want to tarnish the patina of their embellishments.

>I said before the restructuring and I'll say it again, "What I fear
>most about restructuring is a lack of enforcement, and what I fear
>most about maintaining the status quo is a lack of enforcement."
>
>Amateur Radio is now in it's 30th year of a lack of enforcement.

Actually, longer. CB (on HF) became legal 46 years ago...NO
code test then to get on HF, not even a single test to take.

After a few years the "licensure" (token callsign on completion
of application) was removed.

>> To the best of my knowledge,
>
>Well there you go. You're basing your opinion upon your own limited
>knowledge.

True enough. But, "Steve" has LICENSURE and is "fully authorized"
to operate (radiating RF) within the boundaries of amateur radio
regulations. That's enough to make him imagine anything that he
wants is real, legal, and the Absolute Truth. [I still say it is all due
to some post-traumatic stress problem, perhaps from those "seven
hostile actions"]

>> not a single exam in service today has been
>> identified by the FCC as being inappropriate or not in confomance with FCC
>> requirements, nor has the FCC ever directed the removal from service of any
>> Morse Code exam as unacceptable.
>
>Nor would they. It is Morse Code that is specified in Part 97.
>You're going to have to try a little harder to unseat my informed
>opinion.

The FCC still hasn't fully qualified its own definition of International
Morse Code in Part 97, Title 47 C.F.R. Neither do they fully
and unambiguously define telegraphy "word rate."

However, "Steve" imagines he is still Boss NCO of the unit and
gives Orders as if everyone else were the recruits in the "corps."
As if...

>> Steve, K4YZ
>
>Yeh, sure. Whatever.

Opus' Mayor Bill (the Cat) has the last word..."Pbthththth..." :-)

>
>TV shows, movies, and books are written to entertain mass audiences, not
>to be a "reward system" component.

Heh. Depends on the individual "reward system" at work within the various imaginations of the the amateurs. :-)

One example: The "fight" to maintain old, antiquated entranace standards is somehow morphed into some kind of "service of the country" by "maintaining a pool of trained radio operators." Nice patriotic thought but a bit late...it came about in the 1920s, in between the Big Wars. Rather outdated as of 40 years ago.

Out in my neck of the woods is the Entertainment Capital of the USA. Unofficial "capital" but it generates an enormous capitol of providing dreams and wish-fulfillment gratification for millions in the form of emotional entertainment, recreation. Showbiz is about entertainment For Profit To The Entertainers. [nasty old "professionalism" in accepting "filthy lucre" for presenting fantasy] Showbiz folk don't rationalize much about their quest for making all that money...except maybe on all those think pieces found as "interviews" in print and on TV...which, after some rather easy inspection-observation, turns out to be Plants of the PR system to get a Showbiz person into the Public Mind.

What we've got in this venue is some wannabe Leaders in another fantasyland of dreams of glory ("service to the country" for enjoying a hobby or acting like the Boss NCO of a corps) which include the re-enactment of radio's early days. Those "early days" took place well before the life experiences of any of the regulars in here but they press on, making such re-enacts "moral" "legal" and "purposeful," all according to the tenets of the Church of St. Hiram. Amen <cue heavenly chorus in BG>.

Oddly enough, observation of ANY of the amateur radio publications of the last half century WILL turn up the vast majority being White Males involved in the hobby of amateur radio. Myself, among the very many observers, think of them as the Kode Klux Klan. Their Belief System is manifest, sturdily installed in beeping craniums, never to be changed.

The "reward system" lies in Believing as the PCTA do...its own "reward" because they establish the "reward standards."

So...where are all the non-whites in those ham photographs?

Is it a case of "only white men can code?" :-)

"There's no business like code business, like no business I know..."

<cue crawl, up closing theme, roll credits...>

Odd. Instead of 1 more, we see one less. And you see a trend in the direction of Jim's idea. Perhaps if you called it a Contra-trend, I could buy into that idea.

> > > Getting rid of the

Hmmm? I see Jim taking those 90 degree turns without problem. One day the amateur service needs more license classes, the next day there are no complaints and everything is rosey. One day we need higher speed morse code exams, the next day a morse code exam is a barrier to morse code use. Hi, hi!

I'm consistent in my position with respect to amateur radio policy, and you say I make 90 degree turns. More hi, hi's.

That makes taking life's curves really
> tough. Maybe you thought Jim and I carefully aligned our positions
> before posting. We do have a really good system. Jim posts what he
> believes and I post what I believe.

There goes the notion that Jim faxes you guys a white paper or a talking points paper each day.

> > Jim tries to take an opposite position from me, just because it was me

What -am- I to believe?

> > Typical bad attitude Extra.
>
> Bad attitude Extra=anyone who doesn't go along with you.

Nope.

> I don't find you typical of General Class licensees. Would you care to
> put forth any additional sweeping generalities?

Nor do I find you typical of Extra Class licensees.

> > Anyway Dave, I agree with you (and Hans) that we need a legitimate
> > entry level license. bb
>
> Congrats on partial enlightenment.
>
> Dave K8MN

No enlightenment. It was preposterous in 1991 when the FCC made a
1,500 watt license "entry level."

I'm consistent in my position with respect to amateur radio policy.

Perhaps you should. I read so little of your stuff of late due to the nasty nature of your comments.

Your buffet style license was decent, but didn't go anywhere with the FCC during restructuring. I'll do a search for your new three-class structure.

Ahem...my feet are okay, don't drag. :-)

There's been a traditional Holiday in the USA followed by the
November 2nd Day of Mourning. :-)

No chance to venerate the Radio Gods. Been away, living in the
Real Life arena.

>But it was my original thought.

"Dave" doesn't allow "original thoughts" in here. All must Believe as "Dave" believes and That Is That. :-)

"Dave" doesn't like to be "told what to do." But, he has NO problem with telling others What To Do...or What To Think.

Sunnuvagun!

"Dave's enlightenment" is using a #47 pilot lamp to light up his
barn containing all those Olde Radios. Really shines, that light. :-)

>I'm consistent in my position with respect to amateur radio policy.

NCTA are not allowed to be "consistent." We MUST follow the
rulez of the Archaic Radiotelegraphy Society (ARS) because the
Radio Godz SAY we must. There we have it.

Anything the PCTA say is defined as "consistency." Even if they
vacillate (or get vacillated by a licensured medical professional).
Whatever the PCTA say is automatically "consistent." Saying
otherwise is a fantasyland felony, punishable by nastygrams in
public venues.

Remember, NOBODY tells "Dave" what to do. Nobody! :-)

That's unavoidable, Hans.

NTIA's report showed how harmful interference would result from BPL.
So did W1RFI's report and analysis, and the measurements and
observations of many commenters to FCC.

It's not about the "science" at all, but about the politics. And it
goes to the very top; Shrub himself likes BPL. His administration is
willing to pollute HF with BPL noise to get the perceived benefits of
BPL. It's that simple, and that political.

The reality of the situation is simply that BPL systems using HF leak
like mad, because the power lines act like antennas. Heck, that's why
the losses are so high - the lost energy is radiated, not absorbed! It
doesn't take an EE to see that, and also to see that the ubiquity of
power wiring makes it impossible for most hams to get far enough away
from a BPL system to avoid interference.

More "science" isn't what's needed. The folks who make the rules have
their lawyer hats on, not their engineer hats.

For as long as I can remember there's been a "window" on 40 meters where
I've been able to work any country in EU. Starts at 7.000 and stretches
upward for 100KHz.

Should I send her this URL:
http://www.freeantennas.com/projects/Ez-10/

That will give her an 11+ dBi gain on a wireless lan. Should give her
pretty good range, both send and receive. Should she try and aim it down
I-490?

BTW, check that URL out. Nice idea, but I wouldn't advise her to try it.
Oh, wait a minute - she can "talk" farther!

Also, I'm going to give Tim, WB2KAO a call. He had wanted to get together
some weekend and the Antique Wireless Association sounds like a great idea.
Sigh ... I do remember Bruce Kelly. My old brain box just refused to turn
over last night LOL.

Yep, Moundsville is about 70 miles up river from Parkersburg. I'm 14 miles from the river so the best route here from there is to take WV Route 2 north to New Martinsville, hang a right on WV Route 7 to Hundred, turn left onto U.S. Route 250 and follow it north until you see towers, about 3.5 miles before you arrive in Cameron. Tell me when to put the coffee on.

>You want some cheese with that whine Lennie?

What "whine," white man?

The nice Sauvignon in the bar cabinet? The dessert wine from
Iowa? We have cheese from Wisconsin and California here,
no need to get head cheese from the southeast U.S. through
a newsgroup...

My written remark was a wry bit of humor IN GENERAL about
the result of the November 2nd voting...for ALL offices and
issues on the various ballots. HUMOR seems lacking.

Tsk. You use that as an opening for more Trash Talk and
Hate Spam trolling in order to "justify" a personal insult.

Tsk, tsk. Ya cain't fix stupid, can ya? :-)

>How did I KNOW you were a knee
>jerk, bleeding heart, liberal???? By the way you act.

Just HOW is a "knee jerk, bleeding heart liberal" supposed to
act? :-)

I found more relationship to the Mexican Day of the Dead in
regards to the "mourning." Perhaps I'm way too subtle for the
likes of you?

Hint: Halloween is a sort of Anglo-Saxon, Americanized
version of Day of the Dead. [too deep for your understanding?]

Well, I'm rather used to being with the PCTAs who are not
"dead" yet...except in their thinking. [see: Dead-brained]

>Dan/W4NTI Bush Bush FOR MORE YEARS !!

Okay, you get "four" (not "for") more years of Mikey Powell as Commissioner in Charge of the FCC and his wonderful acts of kindness to hobbyists ("hams" to you, saviors of the radio world in your thinking) due to Access BPL. Enjoy the noise in your receiver. :-)

Now that the General Election is (finally!) over, there MIGHT be some action on the 18 petitions plus NPRM on Part 97, Title 47 C.F.R. Do not worry. Your Big Brother in Newington is going to SYA for you by pointing to Powell and making rude noises from Haynie and Sumner. Enjoy the response that results.

Have you joined your National Guard yet? Don't they need all those wonderful morsemen to "go behind the lines" to "send intel back to the 'front'" as they did in WW2? [or was that WW1?] Serve your country the PROPER way, not by imagining you are some sort of "credit" because you indulge in morsemanship on the ham bands.

Now that Fred (thanks) has removed the Belgrade Lakes Bozo from the QRZ database, it's time to keep cleaning house.

Fred, also remove the notorious splattering ND8V, the self proclaimed 14.275 Freq Policeman, who can't seem to locate the mic gain settings on his transceiver, from Kalamazoo. His actions are as illegal as K1MAN's.

WD4AWO, another jammer, who can't even address and envelope (read his QRZ Bio), has a puny signal though, and isn't too brite.

WA9KJI, the well known racist from Evansville, IN.

VE7KFM, need I say why????

K3VR, well this guy is just an idiot without much of a signal, but likes to keep shit stirred up.

K1KW, professional asshole.

I'll add more later.......

In my profession, it's neceesary to know a great many people in a great many different healthcare disciplines.

This will make my fourth time asking your this specific question. A YES or NO is all that's required...Will you accept counselling is I can get a mental health care counsellor to you...?!?!

Why would anyone go through all that?

> That means BUYING chassis somewhere...or
> snaffling ("swipe") them.

You mean steal? I don't do that.

Do you have a guilty conscience, Len?

> At early 1990 prices, that average
> chassis alluded to before would cost about $25. So, for six chassis

> in the photograph that would be a total of about $150.

Except they weren't bought new out of catalogs. Which drastically reduces the price paid.
>
> The excuse to be given will be that he "bought it at a flea market"
> or some hamvention for "a very low price." :-)

How is that an "excuse", Len? It's the truth, in some cases. In others, chassis, panels and other parts were recycled from other sources.

For example, the transmitter section is built in the case from a BC-191/375 tuning unit, with a new panel made from a piece of sheet aluminum. Total cost about $2.

> Whatever the story is, it will have the usual embellishments, the
> brags of greatness, the usual suspects. :-)

You mean like the guy who claimed to have handled X million messages per month 24/7 at a military radio station, but didn't bother to mention the 700+ other personnel there at the time?

Or the guy who claims to have operated from T5 but cannot recall what bands, modes, radios, or antennas were used?

It is a sad state of affairs the the organization that specifies a
Morse Code Exam cannot define Morse Code. Usurpers of regulatory

authority took it upon themselves up the reduced 5 WPM rate to a healthy 13-15 WPM rate in defiance of Part 97.

Its fred's box and he can run it any way he sees fit. he donates time and services on that box and has to pay for it out of his own pocket (plus some sales of software carried there).

if you don't like it, start your own. we'll see just how fast you start going the same route after a few run-ins with the netkooks.

from experience: being an administrator is a damned hard job. it takes a lot of time and, for the most part, things work well. However, its all the details involved that can give a person ulcers (as well I know this!).

so, unless you are willing to put up the $$$ for co-location facilities, provide the server box, install the software, manage the accounts, clean things up, and keep up the maintenance, you might as well STFU (or SYFM).

otherwise, all you do is come off looking foolish.

Well, Fred did leave Baxter's info in the 2004-2005 (Vol 24) QRZ Callsign Database. So, for the price of a CD one can find out where to send your letters of approval to this sore spot of American amateur radio. Buckmaster has K1MAN listed with some interesting info on his QSL manager - plus the following disclaimer: "Some or all of the information displayed here for K1MAN has been added to the HamCall database by an online user and has not been reviewed by the HamCall editors. This unverified data is shown in parentheses ( ) and in red type (on browsers which support font coloring). Due to the volume of updates we receive daily, verification can take some time. Please do not e-mail us about unverified data, we will contact you if neccessary."

Yep. Your remarks lack humor, Len.
>

Tell us.
>
> I found more relationship to the Mexican Day of the Dead in

> regards to the "mourning."

So we should be in mourning because of the outcome of the elections?

Those whose candidates won aren't in mourning. Those whose candidates lost are defeated, not dead.

> Perhaps I'm way too subtle for the likes of you?

Nope. Your remarks just aren't humorous, Len. With or without smileys.

When you try to start a dominance battle without having read the rest of the posts in the thread, you only serve as an illustration of the problems over at qrz.com. I'm not impressed by your posturing as an "administrator" - whatever you think that is.

But I'll repeat part of what you obviously haven't read: Any administrator worth his salt knows how to deal with abuse in an almost invisible way. Making the K1MAN entry read-only is a trivial starting point. Completely removing all information looks like a revenge move and makes the owner look petulant.

So as Fred stomps his tiny feet and has multiple temper tantrums about his users, he simultaneously drives his audience away to more professional sites.

It's called "competition." It always weeds out those who are unfit. Perhaps that description now applies to qrz.com.

Farnsworth is one way of sending a coded message. But it is not Morse
Code.

> It's been around for
> decades and has been recognized by FCC and the ITU as meeting all the
> requirements for the Morse Code test.

That's all Quiteinteresting. Morse Code has very specific timing
specifications that Farnsworth does not meet.

Can you show the FCC and ITU acceptance? Any citation at all will do.
Really.

Our President says BPL is a good thing and is needed for techno-economic
prosperity. He and his appointees at FCC and NTIA say that any interference can
be managed.

Are you saying Our President and his advisors and regulators are wrong?

Leading question noted. Sorry, Jim, but 7th grade debating tactics
don't cut it in the grownup world.

I've said nothing about the president, his advisors, or his regulators.

To refresh your memory and to save you the effort of Goggling is up,
HERE is what I said:

"Rather than (ARRL) spending hundreds of thousands of our dollars
chasing a POLITICAL resolution to this issue where they have gained no
traction and which they can't possibly win, why don't we take the money
we spend on Sumner and Imlay and hire a bunch of Ed Hare's and do the
SCIENCE necessary to discredit BPL. Haynie/Sumner/Imlay are political
lightweights giving Amateur Radio the image of a bunch of obstructionist
amateurs (lower case amateur)."

73, de Hans, K0HB

I wasn't talking about a "movie," Jimmie.

Okay, big expert on the USAF and SAC, how do you get from
the crew compartment of any B-52 into the bomb bay (and
which one)? How does a 180 pound human jar loose a couple-
ton Special Weapons (of thermonuclear yield)?

And, speaking specifically about "radio," whatinhell is that "Gold
Code Receiver" pictured that clicks up little characters in a
supposed "digital display?" It was NEVER on any USAF radio
inventory list, public or secure-sensitive. [there ARE "gold codes"
but those are mathematical, and NOT specifically implemented
or implementable as secure cryptographic means]

>> Yeah, like a (mximum) 200 pound male can "jar loose" 4000
>> pounds of bomb (approximate weight of a special weapons of the
>> time) from its shackles designed to take many g of force. :-)
>>
>> Tsk. These guys go to the movies and think that all the FICTION
>> they see is the TRVTH and nothing but... :-)
>
>Ya never saw it, didja?

Speak English, not baby talk, Jimmie.

I've seen several models of the B-52, even been IN a couple of them.
I've also been around Special Weapons, including the air-drop types.
I'm also fairly familiar with the past USAF radio communications
equipment, at least by sight. Knowing about "oil burner routes," and
some performance envelopes of that Big Ugly Fat 'Fornicator' (BUFF)
I also know that typical bomb-run airspeed is way too high to let
anyone ride on a "shape" (Special Weapons old term) and play rodeo
cowboy with their cowboy hat...airspeed is just too high.

Does make for a nice anti-war motion picture full of way-overdone
satire/sarcasm about the politics of the (then) Vietnam War plus
left-overs of the old-time Cold War (then still hot) of the 50s.

As a "professional" movie-maker and producer, you should KNOW
all that.

>>>The relevant question is "Steel chassis or Aluminum chassis?"
>
>Depends on the application.

What in the world are you gabbling about?

>>>"Greenlee punch or Nibbler?"
>
>>>Such relevant questions.
>
>From two nonbuilders...

Kiss my yes, Jimmie boy.

My hometown is where the Greenlee company IS and I've even been in that part of Greenlee and SEEN those punches being made...in 1949. [that part of Greenlee is just two large rooms of punch-making and grinding machinery, very very small compared to the Main Building they are located in] For that matter, I've also seen part of the GC Electronics operations when their wire-stripper line was still a part of it...and known two who worked there (in 1956). [GC is now a merge with Walsco and most of their 'products' are produced by others on an OEM basis]

I have a small collection of Greenlee punches which have been gathering rust and dust. About every 5 years or so I may take them out, oil them and rub them with some steel wool. Haven't used them for about 9 years or so. Vacuum tube socket hole cutouts aren't a biggie among those NOT into boatanchors. [last time I used one was to put in a larger chassis-mount electrolytic on a repair and refurbish mini-project, took the 1 1/8" round punch]

I suppose next you will demand I show up at Dayton with the "citations" to prove I do things? Harrrr!!!!

>> Actually, it would be. Jimmie say he build with "recycled parts"
>> and his "rig" didn't cost him more than $100.

>> Mouser, even Ocean State Electronics.
>
>Tsk, tsk, tsk, tsk.
>
>Your imagination is limited to what you see in the catalogs of new parts.

Not MY imagination, Jimmie.

What do you do with those old chassis? Use all the old holes for the
"new design?" Make everything "fit" those existing holes?

bwahahahahahahahahaha!

>> Some alloys of aluminum are sort of malleable. 2024 is somewhat
>> that way but don't bend it too much. 6061 is NOT. One can't take
>> a chunk of ordinary aluminum and hammer it flat to fill in the holes
>> (using "recycled" i.e., previously-used), then bend/brake it back to
>> some new shape.
>
>Why would anyone go through all that?

Didn't you? Something about "beating swords into plowshares" but
doing the analogue with all those old chassis?

>> That means BUYING chassis somewhere...or
>> snaffling ("swipe") them.
>
>You mean steal? I don't do that.

Heavens, no! That would be a SIN and you'd still be mumbling
Hail Marys...

>Do you have a guilty conscience, Len?

No. I DO have a conscience. Right now its wondering why I'm wasting
all this time writing a reply to an unrepentant PCTA-er who is bound
and determined to rationalize (one way or the other) that he is perfect
ham in every way.

>> At early 1990 prices, that average
>> chassis alluded to before would cost about $25. So, for six chassis
>> in the photograph that would be a total of about $150.
>
>Except they weren't bought new out of catalogs. Which drastically reduces the
>price paid.

Prove that. Show your work.

Riiighhhht.

>For example, the transmitter section is built in the case from a BC-191/375
>tuning unit, with a new panel made from a piece of sheet aluminum. Total cost
>about $2.

Riiiighhhht. :-)

>> Whatever the story is, it will have the usual embellishments, the
>> brags of greatness, the usual suspects. :-)

>
>You mean like the guy who claimed to have handled X million messages per month
>24/7 at a military radio station, but didn't bother to mention the 700+ other
>personnel there at the time?

U.S. Army radio station ADA sent 220 thousand TTY messages a
month in 1955 in 24/7 operations, radio circuits all over the Pacific
on HF. Pacific edition of the Stars & Stripes military newspaper had
that item in it ('Stripes' was and is still available to the military public
and to dependents). Each and every team supervisor at transmitters
was immediately responsible to keep those radio transmitters
operating when scheduled.

No brag at all. Just a description of duties. I did that as one of the
team supervisors. A long time ago. Many others of E-5 and up also
did that on other shifts [we were on a 12-day cycle, 3 on each shift
and 3 days off as the 4th part of that].

The Photographic Company was not involved in radio communications
yet was a part of the 8235th Army Unit then known as the FEC Sig
Svc Bn (that's "Far East Command Signal Service Battalion" to you
civilians). They worked in downtown Tokyo then in their own large
still-and-motion-picture lab...that rivaled that of the LIFE magazine
photo lab in NYC. Headquarters Company had the Outside Plant
Telephone crews...the ones who put up all the 30 to 70 foot poles
that held wire lines and the antennas for both receiving and trans-
mitting sites. 'Outside Plant' did not send or receive anything but
were needed. Control and Teletype Relay at Chuo Kogyo (outside,
near Camp Drake) were another group that did, respectively, the
radio and wireline circuit control and the torn-tape teletype relay
operations (latter from about 200+ chadless-punch printed tape
machines). I'm not counting those specifically doing microwave
radio relay ops & maintenance (which I also did) or the "Carrier
Equipment" necessary to multiplex several circuits on the same
voice channel (wire or radio).

"Carrier" operations would later morph into handling the terminal
equipment for the DSN-DCS which is now the mainstay for military
communications worldwide (primary, there are other routes by
other means as secondary). The old "carrier" duties now occupy
most of the 78th Bn still at Camp Zama, Japan.

Jimmie, I can get even MORE specific about all of that old stuff
because: (1). I was there; (2). I have documents to prove it;
(3). I have personal photographs as well as Signal Corps photos
(with mimeoed ID on the backs, as military standard then) from
those days; (4). I have other documents obtained as gifts from
a now-retired civilian engineer who was there at the time and stayed
with the station complex after the USAF took over in 1963 (he now
lives in California); (5). I have been in correspondence, both
written and telephone, with another who was there at the same time
as I, has been a amateur radio licensee for years; (6). The

Pacific Stars & Stripes did check out some of my material and published it (article by staffer Rick Chernitzer who did the interview) on 10 November 2002 (it's in the middle of that Sunday edition, a "double truck" or two-page spread as the publishing folks sometimes call it).

No, I don't have a TO&E (Table of Organization and Equipment) which every battalion and up has. A TO&E would itemize all the equipment and who is where in the organization. I don't see much need to get one. I've been in correspondence with 5 others who were there, in that battalion, at the same time I was. We might put one together from memory, but WHY do you need to account for all (approximately) 700?

>Or the guy who claims to have operated from T5 but cannot recall what bands,
>modes, radios, or antennas were used?

You will have to take that up with "him."

Of course, you WILL "correct" him when "he makes errors" because YOU have done all that military and commercial civilian radio communications and "know what it is like," don't you? Of course you do...you READ about it in your various Janes books. You KNOW what it is like to be within flying distance of nastyfolks who Have The Bomb and want to "correct" others about NATO aircraft code names.

I'm wondering what YOU do "to serve your country" which is as good of better than actually serving with the military? Come on, TELL US. Show us your heroism and wonderful deeds that makes YOU so superior you can denigrate those of us who DID serve in the military.

>It is a sad state of affairs the the organization that specifies a
>Morse Code Exam cannot define Morse Code. Usurpers of regulatory
>authority took it upon themselves up the reduced 5 WPM rate to a
>healthy 13-15 WPM rate in defiance of Part 97.

Well, in all honesty, the FCC does have a definition of it, but not an exact one. They still reference an out-of-date (and no longer existing) CCITT document and do not specifically state a word rate. Considering all the technical things the FCC does, definitely, define and describe, it is a wonder that they are so lax on International Morse Code.

We've both seen the numerous rationalizations of the "Farnsworth" spacing but nobody, and I mean NOBODY, has seen that specifically stated in any official version of Part 97, Title 47 C.F.R. (which is published every two years in October by the Government Printing Office and made available for free at the GPO website).

What we got is an "interpretation" by the FCC that Farnsworth spacing "is okay for VECs to use in testing." Not in any Part 97 and never even left the Commission (except to the supreme court of the league).

Not to worry. With the re-election of the Administration there will be "four more years" of the same "attention" to amateur radio affairs as has been for the last 3 1/2 years, the same Commissioner in Chief, and full speed (with lots of champagne) to BPL.

Lots of "incentive" to attract more newcomers into hamme raddio. All that and those warm-hearted ghouls of the PCTA dissing and cussing all those not wanting to emulate or recreate olde-tyme radio.

Tsk. All those "professionals" in law-making and fund-raising and membership-organization-running... :-)

His "bank" has no interest. Come to think of it, I'm not much
"interested" in that "knowledge." :-)

Careful, "Steve" is going to "show you his 'citations' at Dayton!"
[I think his singular citation is swingting...as the saying goes]

I'm still curious as to "Steve's" citations for those 'seven hostile
actions' he claimed he had. Or the acknowledgement that DoD
really does run MARS and does so OUTSIDE the ham bands.
Or "Steve's" power (as a licensured health professional) to pick
up a phone and have just anyone "picked up" by the authorities.
That's just up in the top 3 of dozens of his claims. Ho hum.

Heh heh heh...few others are! :-)

I'd describe what I've been doing...except that is NOT allowed in
here!

What IS allowed in here is Ham Radio POLICY talk about old
museums, computer operating systems, and national politics at
the presidential level. [by Order of the resident PCTAs, of course]

>> >But it was my original thought.
>>
>> "Dave" doesn't allow "original thoughts" in here. All must Believe
>> as "Dave" believes and That Is That. :-)
>>
>> "Dave" doesn't like to be "told what to do." But, he has NO problem
>> with telling others What To Do...or What To Think.
>>
>> Sunnuvagun!
>>
>> LenAnderson@ieee.org
>
>"Listening 7307"
>
>Hi, hi!

Well, "Dave" is going to chime in with his usual 'nyah-nyah, you
ain't involved' solilloqy (or is that 'silly-que?') most any time now.
Then it will be time to ring his chimes for the false notes they are.

"Dave" doesn't want any dissent in here. Some other PCTAs
think the same...so they diss and diss those that present opposite-
to-PCTA opinions...and then cuss and cuss the people who present
those.

Hans should have asked if "Dave" relates to Lebanon, PA. :-)

Tsk. Anyone who celebrated Halloween would have some new
ghoul friends...

"Brian Kelly" <kelly@dvol.com> wrote

> So BPL at this point is *all* a
> political and legal problem.

If that's true, then the money we've spent on lobbying by Hainie, Sumner, and Imlay has been wasted, and any more spent would be further waste. Here, from the FCC R&O, is what that money bought us:

"We similarly do not find that Amateur Radio frequencies warrant the special protection afforded frequencies reserved for international aeronautical and maritime safety operations. While we recognize that amateurs may on occasion assist in providing emergency communications," it described typical amateur operations as "routine communications and hobby activities."

Face it, Brian, we've been marginalized, and for years the FCC has been trying to get our attention. Way back in June of 2000 FCC'er Dale N. Hatfield (W0IFO) Chief, Office of Engineering and Technology made these comments in a speech to AMRAD:

"I would urge you to continue shifting towards more spectrally efficient communications techniques - especially digital techniques. Such a shift has a number of benefits:

"- First of all, it demonstrates to POLICYMAKERS and REGULATORS that you are good stewards of the public's airwaves even without direct economic incentives.

"- Second, by using what you have efficiently, it strengthens your case when you need to ask for additional spectrum.

"- Third, by allowing more users to access the available allocations simultaneously, it improves the amateur experience and ultimately increases the attractiveness of the service to new and old users alike."

Then a couple of weeks later FCC Special Counsel for Amateur Radio Enforcement Riley Hollingsworth, K4ZDH, made some chillingly similar comments in a public speech.

"Take nothing for granted. Bill Gates can't, and you can't either."

"You're at a crossroads now. An old Chinese philosopher (or my grandmother--I can never remember which!) said, "Be careful what you wish for. You may get it." Seize the moment, and make this

your finest hour. Ham radio has been at a crossroads before and has thrived. Continue that tradition."

"Make sure that, on your watch, Amateur Radio never becomes obsolete."

From those two FCC speeches, it ought to be clear to all of us that Amateur Radio does *not* have a "free pass" to spectrum, not will our current allocations be "protected" when other applications come looking for a place to operate.

The handwriting is on the wall --- the FCC isn't much interested in what we used to do, but is intensely watching our current stewardship of the resources that are so highly coveted by other services. Regretably I think we've been found, in Riley's words, "obsolete", and financing a rearguard legal and political maneuvering by Haynie and Imlay is pretty much pissing money down a rathole.

73, de Hans, K0HB

With enough reinforced concrete, we can build some sort of building
that the big planes will just bounce off of. And when I was speaking of
anything we can unleash, I meant an awful lot more that puny airplanes!

Now are those buildings going to be skyscrapers? Nope, they will be so
massive and heavy that they couldn't be built very high. In fact, they
probably wouldn't be above ground at all.

>>be getting into the same problem that existed befor we started having
>>interior frames supporting the outsides of skyscrapers. There is just a
>>limit to self supported weight.
>
> ??

Before the advent of the skyscraper, buildings were "self supporting".
The walls of the building were supporting the entire weight of the
building. If you look at tall old buildings, you will see that the lower
walls are very thick. A good example is an old lighthouse, which is an
economical shape, being circular. It starts out wide and thick at the
bottom, and becomes small and much thinner at the top. This is because
the outside walls must support all the weight. A square building has
even more problems.

With a skyscraper, the weight is supported by a steel skeleton formed
by beams. These beams support the weight of the building, and they can
support a lot of weight because the weight can be spread out over a wide
area, while each beam is not taking up much valuable interior space.
Closest electronic analog is how a whole slew of small resistors in
parallel can function as a kilowatt dummy load.

This means that the skyscraper can continue to rise higher and higher,
log after a traditional load bearing wall building has become so heavy
that the bottom of the building would have all it's space taken up by
the walls of the building.

There were a whole lot of things that also had to happen to make
skyscrapers practical, such as elevators, high quality steel, central
air conditioning, (note a lot of skyscrapers don't need heating) and others.

> The problem wasn't that the structures couldn't stand the impact. They did.

A near slice.

> The problem was the fire, which so weakened what was left of the structure that
> it collapsed.

Yeah, the parts that held the floors in place collapsed, causing the
floor to drop. Then there was a cascade effect

> The "old paradigm" of tall building construction was that the strength was in
> the internal skeleton of steel girders. The WTC used the outer wall as the

Right, but it is still the same principle.

Maybe not. But at that time, they will have some momentum going, and
might even start a moon base with the idea of making it a step towards Mars.

But as time goes on, even that may not inspire us.

>
>>>But I think the real question is not "can it be done?" but "should it be
>>>done?"

I never answered that question.

Barring some global catastrophe, is simply WILL be done. It's like stem
cell research. We can ban it. Someone else will do it. That we won't
allow teaching evolution in schools or insist that a religious account
be taught as science doesn't mean that evolution isn't real. It is, and
what is doesn't depend on what we think is. A good example is in Commie
Russia, Genetic research was stifled because it didn't fit in with their
official philosophy. The rest of the world went on researching, and the
commies (and whatever they are today) ended up suffering for it.

It will happen. We can either do it, or watch someone else do it. We
might become the Portugal of space.

>>>Look at what happened in the 1960s - we focused on getting to the moon

>
> Now we're doing it all over again with SUVs.

Yup. I find the gas guzzling monsters to be a tad annoying. But there
is a consolation. They speed the day when we break free of dependence on
oil as a major source of energy.

The oil supplies are not limitless. In fact, we have arrived at the
time when the price is likely to go high, and stay high. Reserves are
dropping, and already Royal Dutch Shell is in trouble for being less
than accurate about their reserve numbers. The demand for oil has
increased quite a bit with Red China becoming the new economic
powerhouse - yet where are we going to find that fuel? Despite what some
say, fossil fuels are not limitless. We are going to have to find
something else. And I say the sooner the better.

p.s. it isn't going to be corn based ethanol, that is for sure!

Science is not the answer to political situations. Unless of course,
the political situationists want it to be.

It is clear that the powers that be want BPL to happen.

So it will happen. They may run into economic or scientific reality,
but it won't fail because of lack of political desire for it to happen..

Now that Fred (thanks) has removed the Belgrade Lakes Bozo from the QRZ database, it's time to keep cleaning house.

Fred, also remove the notorious splattering ND8V, the self proclaimed 14.275 Freq Policeman, who can't seem to locate the mic gain settings on his transceiver, from Kalamazoo. His actions are as illegal as K1MAN's.

WD4AWO, another jammer, who can't even address and envelope (read his QRZ Bio), has a puny signal though, and isn't too brite.

WA9KJI, the well known racist from Evansville, IN.

VE7KFM, need I say why????

K3VR, well this guy is just an idiot without much of a signal, but likes to keep shit stirred up.

K1KW, professional asshole.

I'll add more later.......

>Best of Luck.

Which ones that "aren't mine", Brain?

You mean my USMC Good Conduct? Sea Service Deployment? Meritorious Unit Citation? National Defense?

Or one's I've collected and keep in a box (which you yourself have admitted were "in a box")

The "Best of Luck" is yours, Brain, as the ones I've cited above may be found in my Service Record Book, and you are free to independently verify them via the Marine Corps, if you care to.

And since I HAVE given them to you, we will wait for you to make that verification and return to us to either tell the world I was lying, or that you were, once again, wrong.

The rest...well, You can "make fun" of someone collecting things if you care to, but you'd only be making an even bigger fool of yourself...as if THAT were possible...

See you at Dayton, Brain.

A good summation of the scene, Hans.

Regardless of the high opinion so many hobbyists have of their
rank/status/nobility of amateur radio, it is still only ONE radio
service among MANY others. It must therefore compete with all
the others...but won't if the approach is based on old, half-century
old "reasons" for existance ('raison d'etre' in French).

Too many of the old-timers concentrate solely on HF bands as
the end-all, be-all of ham radio. The government and commercial
users have already staked out their claims on HF long ago and
maintain them...plus adding the newer data modes as required.

It is the spectral territory ABOVE 30 MHz which so many other
radio services covet...and that is where the radio action IS and
worldwide. The number of items in regards to HF were very few
at WRC-03 and they've been getting smaller and smaller in
number since WARC-79...while the VHF-and-up spectrum area
items at World Conferences have been getting more and more
numerous.

That's what the discussion was about, Len. See the line about "Dr. Strangelove"?

The character played by Slim Pickens goes down into the bomb bay to fix an electrical problem that keeps the bomb bay doors from opening. He doesn't jar a bomb loose.

> How does a 180 pound human jar loose a couple-
> ton Special Weapons (of thermonuclear yield)?

The character played by Slim Pickens goes down into the bomb bay to fix an electrical problem that keeps the bomb bay doors from opening. He doesn't jar a bomb loose. The bomb release (in the movie) is preset.

> And, speaking specifically about "radio," whatinhell is that "Gold

>>Depends on the application.
>
> What in the world are you gabbling about?

Aluminum is good for some applications, steel for others. Didn't you know that?

>>>>"Greenlee punch or Nibbler?"

>>>>Such relevant questions.
>>
>>From two nonbuilders...
>
> Kiss my yes, Jimmie boy.

What does that mean, Len?

You've admitted that you haven't homebrewed any HF transceivers. You refuse or
are unable to use the homepage facilities provided by AOL.
>
> My hometown is where the Greenlee company IS and I've even been
> in that part of Greenlee and SEEN those punches being made...in
> 1949. [that part of Greenlee is just two large rooms of punch-making
> and grinding machinery, very very small compared to the Main
> Building they are located in]

Why is that important?

> For that matter, I've also seen part of
> the GC Electronics operations when their wire-stripper line was still a
> part of it...and known two who worked there (in 1956). [GC is now a
> merge with Walsco and most of their 'products' are produced by others
> on an OEM basis]

So?

> I have a small collection of Greenlee punches which have been
> gathering rust and dust. About every 5 years or so I may take them
> out, oil them and rub them with some steel wool. Haven't used them
> for about 9 years or so.

I'll give ya $5 each for them.

> Vacuum tube socket hole cutouts aren't a
> biggie among those NOT into boatanchors. [last time I used one was
> to put in a larger chassis-mount electrolytic on a repair and refurbish
> mini-project, took the 1 1/8" round punch]

How about that.
>
> I suppose next you will demand I show up at Dayton with the
> "citations" to prove I do things? Harrrr!!!!

None of us have seen anything you've built at home. None of your articles in 'ham radio' were construction articles. You've lots of criticism for others' construction projects, but when asked to show what HF radio projects *you* have built at home, with your own resources and on your own time, the result is a big fat zero.

Len, you're all talk and no action. All show and no go. All sizzle and no steak.

>>> Actually, it would be. Jimmie say he build with "recycled parts"
>>> and his "rig" didn't cost him more than $100.
>>
>>That's true.
>
> Of COURSE it's "true." Jimmie SAID so.

Why would it be false? Do you have a guilty conscience, Len?

> The "word" of a radio god
> is solemn honesty, isn't it?

Talking about yourself?
>
>>> Now anyone considering any sort of metal work for radios had
>>> better have $ome money since an average aluminum chassis
>>> from Bud Industries, LMB-Heeger, or Hammond Manufacturing
>>> (good folks in Canada) is going to cost about $30...and that isn't
>>> including a bottom cover plate.
>>> Metal cabinets are Out Of Sight.
>>> Check any catalog, paper or on-line, Allied, Newark, DigiKey,
>>> Mouser, even Ocean State Electronics.
>>
>>Tsk, tsk, tsk, tsk.
>>
>>Your imagination is limited to what you see in the catalogs of new parts.
>
> Not MY imagination, Jimmie.

Yes, it is, Len. I didn't buy any chassis or other metalwork from any of those catalog outfits. Too expensive.
>
> What do you do with those old chassis?

Reuse them, of course.

> Use all the old holes for the
> "new design?" Make everything "fit" those existing holes?
>
> bwahahahahahahahahaha!

You really have no imagination when it comes to practical radio, Len.
>
>>> Some alloys of aluminum are sort of malleable. 2024 is somewhat
>>> that way but don't bend it too much. 6061 is NOT. One can't take

>>> a chunk of ordinary aluminum and hammer it flat to fill in the holes
>>> (using "recycled" i.e., previously-used), then bend/brake it back to
>>> some new shape.
>>
>>Why would anyone go through all that?
>
> Didn't you?

Nope.

> Something about "beating swords into plowshares" but
> doing the analogue with all those old chassis?

An analogy, Len. Former weapons of war converted into peaceful use.

You really lack imagination, I see.

>>> That means BUYING chassis somewhere...or
>>> snaffling ("swipe") them.
>>
>>You mean steal? I don't do that.
>
> Heavens, no!

That's right.

Did you ever "snaffle" parts, Len?

> That would be a SIN and you'd still be mumbling Hail Marys...

Do you think it's funny to insult other people's religions, Len? It's not.

Besides, I'm not Roman Catholic and I don't "mumble".
>
>>Do you have a guilty conscience, Len?
>
> No.

You sure?

> I DO have a conscience.

You sure?

> Right now its wondering why I'm wasting
> all this time writing a reply to an unrepentant PCTA-er who is bound
> and determined to rationalize (one way or the other) that he is perfect
> ham in every way.

I've never claimed to be perfect or god-like in anything, Len. I'm just a radio amateur who has homebrewed some amateur radio stations over the past 37 years. You haven't done any of that, yet you set yourself up in judgement.

Your reaction might just be your projection of your own inadequacies and jealousy of my accomplishments. Of course I'm not a mental health care

professional but your behavior here says it all.
>
>>> At early 1990 prices, that average
>>> chassis alluded to before would cost about $25. So, for six chassis
>>> in the photograph that would be a total of about $150.
>>
>>Except they weren't bought new out of catalogs. Which drastically reduces
>>the price paid.
>
> Prove that. Show your work.

Why?

>>> The excuse to be given will be that he "bought it at a flea market"
>>> or some hamvention for "a very low price." :-)
>>
>>How is that an "excuse", Len? It's the truth, in some cases. In others,
>>chassis, panels and other parts were recycled from other sources.
>
> Riiiighhhht.

It's exactly right. Hamfests are good sources of parts. Back when I was
actively gatheirng parts, it was common to find NOS chassis and panels still in
the wrappings for very low prices. A little sad, really - stock from companies
gone out of business, estates of deceased amateurs, older hams going into
nursing homes or smaller places who had to unload a lifetime of stuff.

Often I was told "It's you or the dumpster, my friend, I can't take any of it
with me".
>
>>For example, the transmitter section is built in the case from a BC-191/375
>>tuning unit, with a new panel made from a piece of sheet aluminum. Total
>>cost about $2.
>
> Riiiighhhht. :-)

Yes, it is.
>
>>> Whatever the story is, it will have the usual embellishments, the
>>> brags of greatness, the usual suspects. :-)
>>
>>You mean like the guy who claimed to have handled X million messages per
>>month
>>24/7 at a military radio station, but didn't bother to mention the 700+
>>other personnel there at the time?
>
> U.S. Army radio station ADA sent 220 thousand TTY messages a
> month in 1955 in 24/7 operations, radio circuits all over the Pacific
> on HF.

And there were how many personnel stationed there?

> Pacific edition of the Stars & Stripes military newspaper had
> that item in it ('Stripes' was and is still available to the military
> public
> and to dependents). Each and every team supervisor at transmitters
> was immediately responsible to keep those radio transmitters
> operating when scheduled.

It was their *job* and sole responsibility, right? For which they were trained, fed, housed, clothed and otherwise cared for, right? Who paid for all that radio equipment and supporting stuff, Len?
>
> No brag at all. Just a description of duties. I did that as one of the
> team supervisors. A long time ago. Many others of E-5 and up also
> did that on other shifts [we were on a 12-day cycle, 3 on each shift
> and 3 days off as the 4th part of that].

That's nice, Len. I'm happy for ya. But you've told us that story many, many, many times.

What you haven't told is is why it's in any way significant to amateur radio policy *today*.

> The Photographic Company was not involved in radio communications
> yet was a part of the 8235th Army Unit then known as the FEC Sig
> Svc Bn (that's "Far East Command Signal Service Battalion" to you
> civilians). They worked in downtown Tokyo then in their own large
> still-and-motion-picture lab...that rivaled that of the LIFE magazine
> photo lab in NYC. Headquarters Company had the Outside Plant
> Telephone crews...the ones who put up all the 30 to 70 foot poles
> that held wire lines and the antennas for both receiving and trans-
> mitting sites. 'Outside Plant' did not send or receive anything but
> were needed. Control and Teletype Relay at Chuo Kogyo (outside,
> near Camp Drake) were another group that did, respectively, the
> radio and wireline circuit control and the torn-tape teletype relay
> operations (latter from about 200+ chadless-punch printed tape
> machines). I'm not counting those specifically doing microwave
> radio relay ops & maintenance (which I also did) or the "Carrier
> Equipment" necessary to multiplex several circuits on the same
> voice channel (wire or radio).

So you had a little help, huh?
>
> "Carrier" operations would later morph into handling the terminal
> equipment for the DSN-DCS which is now the mainstay for military
> communications worldwide (primary, there are other routes by
> other means as secondary). The old "carrier" duties now occupy
> most of the 78th Bn still at Camp Zama, Japan.

Ah yes, the usual embellishments, the brags of greatness, the usual suspects. :-)

> Jimmie, I can get even MORE specific about all of that old stuff
> because: (1). I was there; (2). I have documents to prove it;

> (3). I have personal photographs as well as Signal Corps photos
> (with mimeoed ID on the backs, as military standard then) from
> those days; (4). I have other documents obtained as gifts from
> a now-retired civilian engineer who was there at the time and stayed
> with the station complex after the USAF took over in 1963 (he now
> lives in California); (5). I have been in correspondence, both
> written and telephone, with another who was there at the same time
> as I, has been a amateur radio licensee for years; (6). The
> Pacific Stars & Stripes did check out some of my material and
> published it (article by staffer Rick Chernitzer who did the interview)
> on 10 November 2002 (it's in the middle of that Sunday edition, a
> "double truck" or two-page spread as the publishing folks sometimes
> call it).

Nobody doubts that you were there, Len. Yet you get all defensive about it.

Here's a tip: Try to explain to us why your experience at ADA is in any way relevant to amateur radio *today*.

> No, I don't have a TO&E (Table of Organization and Equipment)
> which every battalion and up has. A TO&E would itemize all the
> equipment and who is where in the organization. I don't see much
> need to get one. I've been in correspondence with 5 others who were
> there, in that battalion, at the same time I was. We might put one
> together from memory, but WHY do you need to account for all
> (approximately) 700?

Point is, you talk about the operation as if you did it all yourself. Yet in reality there were hundreds of people there, over a period of many years, supplied with everything they needed to do the job.

Amateur radio isn't like that for the vast majority of us hams. We have to do most of it by ourselves, pay for everything ourselves, and do it on our own time. You just don't seem to get that.

>>Or the guy who claims to have operated from T5 but cannot recall what bands,
>>modes, radios, or antennas were used?
>
> You will have to take that up with "him."

I have. He has refused to answer, saying the "questions are too hard". Yet he asks me all kinds of questions and demands answers.
>
> Of course, you WILL "correct" him when "he makes errors" because
> YOU have done all that military and commercial civilian radio
> communications and "know what it is like," don't you? Of course
> you do...you READ about it in your various Janes books.

Where do you get all that nonsense, Len?

The T5 operation I asked about was supposedly an amateur radio operation. But there are no details available.

btw, I haven't read any "Janes books".

You "correct" others when "they are wrong" about amateur radio because
